Number of credits: 3					
Recommended semester/trimester of the course: 2.					
Course level: II.					
Prerequisites:					
Conditions for course completion:					
Learning outcomes: To become familiar with the most significant applications of a graph theory in statistical physics.					
Brief outline of the course: An introduction to thermodynamics and statistical physics. Basic notions of graph theory and their equivalents in physics. The Ising model and its various applications in statistical physics. Exact solution for the planar Ising model as a graph-theoretical problem. High-temperature and low-temperature series expansion, the dual transformation and critical behaviour. The coloring problem of planar graphs and its equivalence with the calculation of a residual entropy of the Ising models. Ice-type models and their various applications in statistical physics. The first-order phase transitions and their analysis with the help of AG inequality. The Potts model and its various applications in statistical physics.

Prerequisites: ÚMV/VKP/10	
Conditions for course completion: To obtain in written tests during the semester at least 50%. Total evaluation based on written tests and oral exam.	
Learning outcomes: To provide a grounding in modelling of stochastic processes and their applications to real life problems.	
Brief outline of the course: Stochastic (random) processes, their distributions and characteristics. Trajectory of the process. Classification of processes -homogenous,ergodic and stacionary process. Markov chains with discrete time, classification of states of the process. Evaluation of transitions, optimal strategies, Howard's algorithm. Markov chains with continuous time, intensity of transition. Kolmogorov's differential equations, methods of solutions. Poisson process. Birth-and-death processes. General linear process. Applications to queuing theory. Kendall's classification of queuing systems, opened and closed systems, systems with waiting. Applications to renewal theory and reliability. Markov chains in discrete renewal models. Renewal process with continuous time. Limit theorems of renewal theory.
