| University: P. J. Šafárik University in Košice | |
| Faculty: Faculty of Science | |
| Course ID: ÚBEV/ ACM/12 | Course name: Analytical Cytometry |
| Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 2 Per study period: 14 / 28 Course method: present | |
| Number of credits: 4 | |
| Recommended semester/trimester of the course: 4. | |
| Course level: II., III. | |
| Prerequisites: | |
| Conditions for course completion: | |
| Learning outcomes: The goal of the course is to teach the students fundamental theoretical and practical aspects of analytical cytometry. The course covers multiple areas of methods in microscopy with special focus on fluorescence and its application in confocal microscopy, morphometric measurements and their applications in cytology, determination of vital parameters and live cell imaging, basic methods for sample preparation etc. | |
| Brief outline of the course: Fundamentals of fluorescent methods, principles of fluorescence and various fluorescent methods (FRET, FLIM, FLIM-FRET, FRAP etc.), utilization of fluorescent and fusion proteins. Principles of confocal microscopy (spinning disc CM, laser scanning CM), principles of colocalisation studies, software image analysis. Analyses on living cells – principles, hardware requirements, methods for vital parameters analyses, imaging methods with regard to lipids, cytoskeleton dynamics or cell division. Fluorescent dyes and their applications in analytical cytometry – nucleic acid, lipid, proteins, cytoskeleton stainings, visualization of cell organelles, vital stainings, membrane transport, reactive oxygen and nitrogen species (ROS, NOS), membrane potential, pH etc. | |

| Conditions for course completion: Active participation on seminars, accomplishment of bioinformatic tasks, oral examination | | | | | | | |
| Learning outcomes: Grasp of specialized bioinformatic knowledge in the field of genetics of the selected organisms. Gain experiences in working with the various databases and data processing of various types. | | | | | | | |
| Brief outline of the course: Introduction to the basic and advanced bioinformatic tools in the field of genetics. Work with the databases dedicated for the students specialized in biological disciplines. Basics of Linux operating system, command line approaches. Computational tools in the analysis of the PCR reaction dependent methods. Possibilities of sequencing and genotyping. Study of individual sequences of DNA, RNA and proteins. Presentation of biological data originating from the different "Omics" areas. Cloud analysis and NGS data. RNAseq data testing, assembly, contigs mapping, analysis of different expression levels of genes. | | | | | | | |

| Course ID: ÚBEV/ FG/14 | Course name: Functional genomics |
| Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present | |
| Number of credits: 5 | |
| Recommended semester/trimester of the course: 2. | |
| Course level: II., III. | |
| Prerequisites: | |
| Conditions for course completion: Active participation in practical and theoretical courses | |
| Learning outcomes: Functional genomics attempts to answer questions about the function of DNA at the levels of genes, RNA transcripts, and proteins. A key characteristic of functional genomics studies is their genome-wide approach to these questions, generally involving high-throughput methods rather than a more traditional “gene-by-gene” approach. The outcome of this course will be understanding of the approaches and methods used in functional genomics and their application in research as well as in practice. | |
| Brief outline of the course: <ul style="list-style-type: none"> • Introduction to functional genomics • Genome and functional genomics: sequenced model organisms, conceptual and methodological input of genome sequencing, structural vs. functional genome annotation • Genome-wide reverse genetics: techniques to create collections of genome-wide mutants and their use in functional genomics • Transcriptomics: methods to obtain transcriptome data, data analysis, data mining • Proteomics: methods to obtain proteome data, quantitative vs. qualitative proteomics, data analysis, data mining, protein networks • Metabolomics: methods to obtain metabolomic data, quantitative vs. qualitative metabolomics, data analysis, data mining • Biological databases and other resources for functional genome analysis • A real-case applications of the functional genomics | |

| Learning outcomes: The goal is to teach the students on II. and III. stage some theoretical and practical aspects of analytical cytometry with special focus on flow cytometry. The course will cover theoretical bases of fluorescence, its detection, multiparametric analyses and practical applications in clinical diagnosis and scientific research. | | | | | | | |
| Brief outline of the course: Fluorescence: physical bases, detection, various designs of instruments exploiting fluorescence detection, fluorescent dyes, fluorescently labeled antibodies Flow cytometry: principle of hydrodynamic focusing, signal detection, analog and digital data processing, data plotting, gating. Various types of analyses, basic applications, summary of commercial hardware and software. Cell sorting: physical principles of cell sorting – advantages and disadvantages, sorting strategies, summary of applications and commercial hardware and software. Practical software data analyses. | | | | | | | |

| Course level: I., II. | |
| Prerequisites: | |
| Conditions for course completion: active participation in seminars preparation of the oral presentation to the selected topic semestral written test oral examination | |
| Learning outcomes: The main goal of the subject is to get knowledge on the basic reasons of recent distribution of the animals on the Earth, zoogeographic regionalization of the Earth's surface and human influence on the faunal distribution in the history. | |
| Brief outline of the course: This course will review our current understanding of the patterns of animal distribution and the processes that influence distributions of species and their attributes. Zoogeography will integrate information on the historical and current ecology, genetics, and physiology of animals and their interaction with environmental processes (continental drift, climate) in regulating geographic distributions. The course will emphasize descriptive and analytical approaches useful in hypothesis testing in zoogeography and will illustrate applied aspects of zoogeography (e.g. refuge design in conservation). | |
