COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice

Faculty: Faculty of Science

Course ID: ÚFV/ POCF/13	**Course name:** Computational Physics

Course type, scope and the method:
Course type: Lecture
Recommended course-load (hours):
Per week: 4 **Per study period:** 56
Course method: present

Number of credits: 8

Recommended semester/trimester of the course: 2.

Course level: III.

Prerequisities:

Conditions for course completion:
Examination

Learning outcomes:
To acquaint students with modern methods of computational physics and their application to different physical systems.

Brief outline of the course:
Brief outline of the course:
1. Molecular Dynamics. Hybrid Monte Carlo method and spin dynamics. Langevin equations. Cellular automata of lattice gas. Quantum Monte Carlo simulations of lattice systems based on Suzuki-Trotter relation. Ising model in transversal field. Anisotropic Heisenberg chain. Monte Carlo Renormalization Group (MCRG) methods. Mao and Swendsen method. Problems of dynamics.
2. Non-equilibrium and irreversible processes. Driven diffusive systems. Growth of crystals, domains and polymers. Growth models of thin layers. Cellular automata in physical modeling. Statistical mechanics of lattice gas. Diffusion phenomena. Reaction-diffusion processes. Non-equilibrium phase transitions.
3. Other models and applications. Fitting data with linear models. Pattern recognition. Recurrent neural networks and time series prediction. Hebbian learning. Principal component analysis. Stochastic signal processing. Simulations of neural networks. Socio-physical models motivated by spin models. Galam models. Voter model in hierarchical systems. Model of group decision making. The opinion dynamics. Sznajd model and its applications.

Course method: present

Number of credits: 4

Recommended semester/trimester of the course: 2.

Course level: III.

Prerequisities:

Conditions for course completion:

Learning outcomes:
The main goal of lectures is introduction to matter extremal states topic.

Brief outline of the course:
Lectures are introduction to extremal state of matter. Deals with wide spectrum of of effects beginning with electromagnetic plasma, following with phase states of matter in very hot/dense conditions and finish with a high speculative forms of matters. These can be responsible for accelerated expansion in very early state of space (inflation) or for his actual acceleration (dark energy). Lestures are also short introduction to modern cosmology, with relations to nuclear and particle physics.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ UFRJZ/09	**Course name:** Introduction to Physics of Relativistic Nuclear Collisions
Course type, scope and the method: **Course type:** Lecture **Recommended course-load (hours):** **Per week:** 2 **Per study period:** 28 **Course method:** present	
Number of credits: 5	
Recommended semester/trimester of the course: 2.	
Course level: III.	
Prerequisities:	
Conditions for course completion: written test and thesis exam	
Learning outcomes: Acquisition of basic knowledges from the high-energy heavy ion physics.	
Brief outline of the course: Heavy ion collisions from intermediate to ultra-relativistic energies are covered in this lecture. After the introductory part, including kinematics, cross sections, geometry and centrality of nuclear collisions, the fragmentation processes, multiplicities, longitudinal and transverse momentum spectra of secondary particles are discussed. The next part covers a wide range of subjects from strangeness production and heavy flavors through creation of antinuclei and hypernuclei in nuclear collisions to hadron femtoscopy. Some selected phenomena connected with possible production of the dense and hot nuclear matter (quark-gluon plasma) are introduced. Finally, collective flows, charmonium suppression, di-lepton mass spectra, direct photons and production of particles with high transverse momenta are presented.

Course ID: ÚFV/ USM/04	**Course name:** Introduction to Standard Model

Course type, scope and the method:
Course type: Lecture
Recommended course-load (hours):
Per week: 2 **Per study period:** 28
Course method: present

Number of credits: 5

Recommended semester/trimester of the course: 2.

Course level: III.

Prerequisities:

Conditions for course completion:

Learning outcomes:
The aim of the course is to give to the students basic knowledges about unified theory of electro-weak interactions

Brief outline of the course:
1. From the metodological point of view the lectures are based on explanation of known processes of weak interaction where beta-decay belongs.
2. Genesis of modern electro-weak theory and standard model is given by inductive method starting from definition of V-A currents, choise of appropriate calibration symmetry, corresponding intermediate bosons and Yang_Mils quantum fields and Higgs mechanism.
3. As a result the modern formulation of Glashow- Weinberg-Salam standard model is proposed.

Recommended literature:
1. J. Hořejší: Introduction to electroweak unification (World Scientific, Singapore 1994);
czech version: Elektroslabé sjednocení a stromová unitarita (Karolinum, Praha 1993).
2. P. Renton: Electroweak interactions (Cambridge Univ. Press, Cambridge 1990).

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice

Faculty: Faculty of Science

Course ID: ÚFV/ DCK/14	**Course name:** Particle detection by calorimetric methods

Course type, scope and the method:
Course type: Lecture
Recommended course-load (hours):
Per week: 2 **Per study period:** 28
Course method: present

Number of credits: 4

Recommended semester/trimester of the course: 2.

Course level: III.

Prerequisities:

Conditions for course completion:

Learning outcomes:
Special lectures oriented towards particle calorimetry.

Brief outline of the course:
PASSAGE OF PARTICLES THROUGH MATTER
Electronic energy loss by heavy particles, Moments and cross sections, Maximum energy transfer in a single collision
Stopping power at intermediate energies, Mean excitation energy, Density effect, Energy loss at low energies
Energetic knock-on electrons (δ rays) , Restricted energy loss rates for relativistic ionizing particles
Fluctuations in energy loss, Energy loss in mixtures and compounds, Ionization yields
Multiple scattering through small angles,
Photon and electron interactions in matter
Collision energy losses by e±, Radiation length, Bremsstrahlung energy loss by e±
Critical energy, Energy loss by photons, Bremsstrahlung and pair production at very high energies
Photonuclear and electronuclear interactions at still higher energies ,
Muon energy loss at high energy
Cherenkov and transition radiation
Optical Cherenkov radiation
Coherent radio Cherenkov radiation
CALORIMETERS
Principles of Calorimetry
Electromagnetic and Hadronic Showers
Shower Profiles and Containment
Electromagnetic calorimeters
Hadronic calorimeters
Free electron drift velocities in liquid ionization chamber
Types of Calorimeters:
Compensating and non-compensating
Total Absorption, Sampling, homogeneous

Scintillation, Ionization, Cherenkov
Signal Detection
Shower shapes in hadron calorimeters
Fluctuations in hadronic energy measurements
Position resolution in the calorimeters
Shower maximum detectors
Signal read-out, processing, calibration of readout electronics. Physics calibration of electromagnetic and hadron calorimeters, jet reconstruction, determination of missing energy and that of the jet energy scale.(Getting from calorimetry to physics results)
Energy and position resolution in calorimetry.

Course type, scope and the method:
Course type: Lecture
Recommended course-load (hours):
Per week: 2 **Per study period:** 28
Course method: present

Number of credits: 5

Recommended semester/trimester of the course: 1.

Course level: III.

Prerequisities:

Conditions for course completion:

Learning outcomes:
To acquaint with basic information about the theory of strong interactions - quantum chromodynamics

Brief outline of the course:
1. Lectures are oriented on explanation of the strong interaction on the base of first principles, their description and analysis of both elastic and deep-inelastic scattering of hadrons and leptons.
2. Determination of the color is introduced, which is basic quantum number for strongly interacting particles and fundamental physical principle on which quantum chromodynamics (QCD) is constructed.
3. Basic features of this theory are explaned and it is demonstrated its application for calculation cross sections of typical interacting processes in presence of mesons and baryons.

Recommended literature:

Course ID: ÚFV/ RMU/12	**Course name:** Radiobiological Modeling of the Effect of Ionizing Radiation

Course type, scope and the method:
Course type: Lecture
Recommended course-load (hours):
Per week: 2 **Per study period:** 28
Course method: present

Number of credits: 4

Recommended semester/trimester of the course: 1.

Course level: III.

Prerequisities:

Conditions for course completion:

Learning outcomes:
To review biophysical and statistical models for evaluation of biological equivalent dose (BED) of ionizing radiation based on the type of dosing and timig of the therapy as well as on the type of biological object (tumor, healthy tissue. To describe the linear-quadratic model, Lyman model for predictive determination of complications (NTCP) and the Poisson model for the determination of tumor control probability (TCP).

Brief outline of the course:
Classification of tissue damage by ionozing radiation – outputs of experimental and clinical radiobiology. Stochastic a deterministic effects of ionozing radiation. Immediate and retarded effects of ionozing radiation. Radiation damage of the malignant and normal tissue – therapeutic ratio. Tumor reaparation, repolulation, redistribution, and reoxygenization. Linear-quadratic model and the biological equivalent dose. Volume factor in the radiotherapy – dose-volume histograms (DVH). Lymanov-Kutcher-Burman model of complication propabilityNTCP. Recommandations of the QUANTEC project for the appreciation of the retarded effects prediction. The Poisson model for the determination of tumor control probability - TCP. BioGray – an SW tool for the TCP/NTCP predictive modeling. Optimalization of the radiation treatment applying 3D CT/MR , DVH and fractionation.

Course type, scope and the method:
Course type: Lecture
Recommended course-load (hours):
Per week: 4 **Per study period:** 56
Course method: present

Number of credits: 10

Recommended semester/trimester of the course: 1.

Course level: III.

Prerequisities:

Conditions for course completion:

Learning outcomes:
Knowledge broadening of experimental nuclear and subnuclear physics taught during undergraduate study and renewing with newest informations and results from the field.

Brief outline of the course:
1. - Subnuclear physics. Lecture show a review of the newest experimental results in elementary particle physics with focus on estimation of neutrino mass, CP symmetry violation in B-mesons decays, testing of Standard model at TeV energies, Higgs boson discovery, quark-gluon plasma properties and supersymmetric particles searches as a candidate for dark matter.
2. - Cosmic physics. Introduction to micro-world physics, relativistic kinematics, basic classification of elementary particles and experiments leading to their discoveries, physical principles of particle acceleration, classification of particle accelerators and their applications.
3. - Applied nuclear physics
General topics:Rutherford Scattering, Nuclear Phenomenology, Nuclear Models, Nuclear Radiation, Applications of Nuclear Physics, Energy deposition in Media, Particle Detection, Accelerators, Properties of Elementary Particles, Symmetries, Discrete Transformations, Neutral Kaons, oscillations and CP Violation, Standard Model
Special topics: Nuclear Reactions, Biological Effects of Radiation, Industrial and Analytical Applications, Nuclear Medicine

Recommended semester/trimester of the course: 2.	
Course level: III.	
Prerequisities:	
Conditions for course completion:	
Learning outcomes: The aim is a short renewal of master course and application of quantum field theory in physics of elementary particles and in macroscopic systems with infinite number of degrees of freedom.	
Brief outline of the course: 1. Lectures cover wide sphere of problems of high energy physics and statistical physics. Specific applications are carried out for basic theories of elementary particles – Quantum electrodynamics (QED), Quantum Chromodymanics (QCD), standard model (SM) and for some models of unified theory of elementary particles. 2. Application of quantum field theory to the classical physics is concentrated on explanation of connection between the quantum field and statistical fluctuations of classical fields, generating functional of Green functions of quantum fields and statistical sum, on the Feynman graphs and perturbative technique in statistical physics

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ SJSF3a/04	**Course name:** Seminar from Nuclear and Subnuclear Physics

Course type, scope and the method:
Course type: Lecture
Recommended course-load (hours):
Per week: 2 **Per study period:** 28
Course method: present

Number of credits: 3

Recommended semester/trimester of the course: 5.

Course level: III.

Prerequisities:

Conditions for course completion:

Learning outcomes:
To bring the topical problems, methodics and tools of high energy physics to the students.

Brief outline of the course:
Department seminar - selected topical problems of the nuclear and subnuclear physics.

Recommended literature:

Course language:

Notes:

Course assessment
Total number of assessed students: 6

University: P. J. Šafárik University in Košice

Faculty: Faculty of Science

Course ID: ÚFV/MSF/04	**Course name:** Simulation of Experiments and Processes in Subatomic Physics

Course type, scope and the method:
Course type: Lecture
Recommended course-load (hours):
Per week: 2 **Per study period:** 28
Course method: present

Number of credits: 5

Recommended semester/trimester of the course: 1.

Course level: III.

Prerequisities:

Conditions for course completion:

Learning outcomes:
To introduce the students into the simulation of experiments and to the available programming tools.

Brief outline of the course:
The role of simulation in physics. Basics of probability theory and mathematical statistics. Frequently used distributions in physics. Basics of the Monte Carlo methods. Random number generators and their realisations. Programming tools used in high energy physics experiments simulation (e.g. GEANT, PYTHIA).

Faculty: Faculty of Science

Course ID: ÚFV/ SLNZ/09	**Course name:** Study of Lepton-Nucleon Collisions

Course type, scope and the method:
Course type: Lecture
Recommended course-load (hours):
Per week: 2 **Per study period:** 28
Course method: present

Number of credits: 5

Recommended semester/trimester of the course: 2.

Course level: III.

Prerequisities:

Conditions for course completion:

Learning outcomes:
To review the results of lepton-nucleon collision studies.

Brief outline of the course:
The lectures are concentrated on the analysis of relativistic leptons (electron, positron, and neutrinos) collisions with nucleons (protons and neutrons) and based on these results to study the internal structure of hadrons, mainly that of the proton. Determination of the proton (neutron, pion) structure functions and the extraction of parton structure functions in the proton.To study the photon structure function and analysis of diffractive processes in lepton-nucleon collisions.
