| Learning outcomes: To provide the students with the recent knowledge of the structure of the Universe at the elementary particle level. | | | | | |
| Brief outline of the course: The lectures provide an insight into the microstructure of the Universe - starting with early cosmic phases like quark-gluon plasma, baryogenesis and first nuclei creation and continue with the structure of nowadays Universe: main sequence stars, white dwarfs, neutron stars, black holes, interstellar and inter galactic space, dark matter and dark energy and cosmic rays. | | | | | |

| Learning outcomes: The goal of the subject is to introduce the students to the physical matters of the high (over 10^{15} eV) and ultra high (over $4 \cdot 10^{19}$ eV) cosmic rays. The lectures will concern the history of their observation, the principal of measurement, actual and future experiments, especially JEM-EUSO experiment (the first space-based experiment, which will observe from the International Space Station). The final lectures will review the principles of their propagation and acceleration in galactic and intergalactic space and discuss possible sources of origin. | | | | | |
