<b>University:</b> P. J. Šafárik University in Košice					
<b>Faculty:</b> Faculty of Science					
<b>Course ID:</b> ÚFV/ ARE1a/99		<b>Course name:</b> Automatization of Physical Experiments			
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 <b>Per study period:</b> 28 <b>Course method:</b> present					
<b>Number of ECTS credits:</b> 3					
<b>Recommended semester/trimester of the course:</b> 1.					
<b>Course level:</b> II.					
<b>Prerequisites:</b>					
<b>Conditions for course completion:</b> 2 tests during semester Exam, according to the topics of the lectures.					
<b>Learning outcomes:</b> Design of automated setups for performing selected types of physical measurements. Discussion of properties of measuring and controlling subsystem.					
<b>Brief outline of the course:</b> Structure of systems of automated measurement and control. Characterization of instrumentation equipped with microcomputer. Sensors of physical quantities, principle of operation, technical realization of selected types of sensors. Elements for processing signal from sensors. Electronic regulators, software simulation of analog regulators. Standart communication protocols CAMAC, IEEE488, RS232. Universal microprocessors and microcomputers. Digital signal processing. Design of digital filters.					
<b>Recommended literature:</b> J. Uffenbeck, Microcomputers and microprocessors, Prentice Hall, 1985. P. Horowitz, W. Hill, The Art of Electronics, Cambridge University Press 1989.					
<b>Course language:</b> slovak, english

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice					
<b>Faculty:</b> Faculty of Science					
<b>Course ID:</b> ÚFV/ ARE1b/99		<b>Course name:</b> Automatization of Physical Experiments			
<b>Course type, scope and the method:</b> <b>Course type:</b> Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 3 <b>Per study period:</b> 42 <b>Course method:</b> present					
<b>Number of ECTS credits:</b> 3					
<b>Recommended semester/trimester of the course:</b> 2.					
<b>Course level:</b> II.					
<b>Prerequisites:</b> ÚFV/ARE1a/99					
<b>Conditions for course completion:</b> Evaluation of results reached during solving given tasks. Final evaluation of the obtained results.					
<b>Learning outcomes:</b> Obtaining practical skills in programing automated experimental setups. Extension of knowledge about properties of non-ideal digital to analog and analog to digital converters. Obtaining skills in practical programming of model situations for experimental setups designed for investigation of thermodynamic properties of solids as well as in design of digital filters. A student will also become familiar with handling selected automatedl setups designed for experimental studying solids.					
<b>Brief outline of the course:</b> Basic programing in Python language. Problem solving for selected setups for automation: Temperature controller. Nonlinearity of digital - analog and analog -digital converters. Analog - digital converter with feedback. Analog signal filtering. Study of heat flow in materials with low thermal conductivity. Digital filtering of signal.					
<b>Recommended literature:</b> Supporting material is available.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Science	
<b>Course ID:</b> ÚFV/MSSFKL/15	<b>Course name:</b> Condensed Matter Physics
<b>Course type, scope and the method:</b> <b>Course type:</b> <b>Recommended course-load (hours):</b> <b>Per week: Per study period:</b> <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 4	
<b>Recommended semester/trimester of the course:</b>	
<b>Course level:</b> II.	
<b>Prerequisites:</b> ÚFV/MKL/03 and ÚFV/FNT1/03 and ÚFV/TKL1/99	
<b>Conditions for course completion:</b> Obtaining required number of the credits given by the study plane.	
<b>Learning outcomes:</b> Evaluation of the competences of the students according to the profile.	
<b>Brief outline of the course:</b> The state exam consists of defending diploma thesis and exam which has two blocks. The student is obliged to pass the exam from the compulsory block and one of two optional blocks. I. Block – compulsory Theory of condensed mater 1. Basic approximations in solid state physics. The Born-Oppenheimer adiabatic approximation. The Hartreeho-Fock method. 2. The definition of ideal crystal. The direct and reciprocal lattice. The Wigner-Seitz elementary cell. 3. Electrons in a periodic potential field. The effective mass. 4. The finite crystal and Born-Kármán boundary conditions. Brilluoin zones. 5. The approximation of nearly-free electrons. The band structure of energy spectrum. 6. The tight binding method. Differences of the band structure in comparison with the approximation of nearly-free electrons. 7. The harmonic approximation and lattice vibrations . Vibrations of the linear chain with one atom per unit cell. 8. Vibrations of the linear chain with two atoms per unit cell. 9. Quantum theory of harmonic vibrations. Phonons. 10. The second quantization. 11. The electron-phonon interaction. II. Optional block Magnetic properties of solids 1. Magnetic moment of atom. 2. Diamagnetism. 3. Paramagnetis. 4. Ferromagnetism. 5. Antiferromagnetism.	

6. Ferrimagnetism.
7. Energy of ferromagnets.
8. Domain structure.
9. Magnetization processes.
Experimental methods
10. Measurement of intensity and induction of magnetic field.
11. Measurement of magnetostriction and anisotropy.
12. Physical principle of electron microscopy, construction of electron microscope.
13. X – ray and electron diffraction and their applications in solid state physics.
14. Analytical methods for determination of surface chemical composition (EDX, WDX).
III. Optional block
Low temperature physics
1. Superfluidity of $^4\text{He}$ .
2. Superfluidity of $^3\text{He}$ .
3. Properties of liquid solutions $^3\text{He} - ^4\text{He}$ .
4. Quantum crystals.
5. Introduction to superconductivity – Josephson effect and its applications.
6. BCS and Ginzburg-Landau theories of superconductivity.
7. Unconventional superconductivity.
8. Transport of charge and heat at low temperatures.
9. Methods of reaching very low temperatures.
10. Methods of measurements of low temperatures.
Experimental methods
11. Specific heat at low temperatures - measurement techniques and data acquisition.
12. Low level signal measurements.
13. Electron - paramagnetic resonance.

<b>Prerequisites:</b>					
<b>Conditions for course completion:</b> Discussion accompanied with the preparation and presentation of a short project					
<b>Learning outcomes:</b> Student will obtain basic information about structural, mechanical and optical properties of liquid crystals as well as about their applications in technical praxis.					
<b>Brief outline of the course:</b> Basic properties of liquid crystals. Classification of liquid crystals. Liquid crystalline phases and chemical structure. Optical anisotropy. Interaction of liquid crystals with electric and magnetic field – Freedericksz transitions. Applications. Composite systems based on liquid crystals.					
<b>Recommended literature:</b> 1. P.G.de Gennes, The Physics of Liquid Crystals, Clarendon Press, Oxford 1974 2. N.Tomašovičová, P.Kopčanský, N.Éber: Magnetically Active Anisotropic Fluids Based on Liquid Crystals, Anisotropy Research: New Developments, ed. Hirpa Lemu, Nova Science Pub Incorporated, 2012.

<b>University:</b> P. J. Šafárik University in Košice					
<b>Faculty:</b> Faculty of Science					
<b>Course ID:</b> ÚFV/ FNT1/03		<b>Course name:</b> Low Temperature Physics			
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture <b>Recommended course-load (hours):</b> <b>Per week:</b> 4 <b>Per study period:</b> 56 <b>Course method:</b> present					
<b>Number of ECTS credits:</b> 6					
<b>Recommended semester/trimester of the course:</b> 3.					
<b>Course level:</b> II.					
<b>Prerequisites:</b>					
<b>Conditions for course completion:</b> Two tests during the semester. Final examination consists of the results of two tests and oral exam. The oral exam may be waived of if the tests results are better then D.					
<b>Learning outcomes:</b> The cours gives knowledge of methods and techniques used in low-temperature physics and information on basic physical properties of condensed matter at low temperatures.					
<b>Brief outline of the course:</b> Phase diagram of 4He. Thermal and transport propertie sof liquid helium-4. Superfluidity. Two-fluid model for superfluid He II. Hydrodynamics and thermodynamics for superfluid helium-4. Quantize vortices. Phase diagram of 3He. Order parameter. Properties of 3He-4He solutions. Quantum crystals. Superconductivity. Tunnel superconducting junctions. Application of superconductivity. Transport properties (electrical and thermal) of solids at low temperatures. Macroscopic quantum effects and mesoscopic systems. Specific heat of solids at low temperatures. Reaching low and very low temperatures. Thermometry. New problems of low-temperature physics.

<b>Course ID:</b> ÚFV/ MAG/08/08		<b>Course name:</b> Magnetochemistry			
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 1 <b>Per study period:</b> 28 / 14 <b>Course method:</b> present					
<b>Number of ECTS credits:</b> 5					
<b>Recommended semester/trimester of the course:</b> 1.					
<b>Course level:</b> II.					
<b>Prerequisites:</b>					
<b>Conditions for course completion:</b> Exam					
<b>Learning outcomes:</b> Introduction to the basic interactions in the electron subsystem of insulators, demonstration of the correlations between the structure and magnetic properties. Students will learn the basic standard methods used in the analysis of thermodynamic data (specific heat, susceptibility, magnetization) and EPR, since the study of magnetic properties yield an important information about the structure of material especially at low temperatures.					
<b>Brief outline of the course:</b> Electronic states in hydrogen atom, electronic configuration, term, multiplet. Paramagnetic and diamagnetic atoms. Atom in magnetic field: specific heat, susceptibility, magnetization and electron paramagnetic resonance (EPR). Atom in the crystal field. Freezing of angular momentum. Spin Hamiltonian. Thermodynamics and EPR of paramagnetic atoms in the crystal field. Exchange and dipole interaction. Heisenberg Hamiltonian. Magnetic dimer. Long-range and short-range order. Low-dimensional magnets. Spatial anisotropy of exchange coupling. Exchange anisotropy. Heisenberg, Ising and XY model.

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Science	
<b>Course ID:</b> ÚFV/ MSA1/03	<b>Course name:</b> Methods of Structural Analysis
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 3 / 2 <b>Per study period:</b> 42 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 7	
<b>Recommended semester/trimester of the course:</b> 2.	
<b>Course level:</b> I., II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> Elaboration of theoretical projects on EM topics and practical lab session on TEM: 50% Elaboration of practical RTG project: - 50%	
<b>Learning outcomes:</b> The course is oriented on modern methods of structural analysis of metals. Main topics are: optic microscopy, electron microscopy (TEM, SEM), electron microprobe analysis and X-ray diffractometry.	
<b>Brief outline of the course:</b> Optic microscopy. Electron microscopy: Electron beam instruments, Electron optics, Electron lenses and deflection systems, Transmission electron microscopy - principle and construction. Electron – specimen interactions. Electron diffraction. Kikuchy lines. Scanning electron microscopy – principle and cnstrucion. Scanning transmission electron microscopy. High Voltage electron microscopy. Electron microprobe analysis: WDX spectrometer, EDX spectrometer, Auger electron spectrometer. Self-emision microscopy. Convergent beam diffraction. X-ray diffractometry: Scattering of x-rays, Neutrons and neutron scattering, CW - diffractometer, Ewald's sphere, Diffraction on powder samples, The main characteristics of powder diffraction pattern, Structure factor, Occupation factor, Atomic displacement factor, Peak intensity, shape and symmetry, Sherrer equation. Peak profile, Rietweld method. Qualitative phase analysis, parameters of elementary cell, Profile analysis of diffraction peak and interpretation of profile analysis.

<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 1 <b>Per study period:</b> 28 / 14 <b>Course method:</b> present							
<b>Number of ECTS credits:</b> 3							
<b>Recommended semester/trimester of the course:</b> 2.							
<b>Course level:</b> II.							
<b>Prerequisites:</b>							
<b>Conditions for course completion:</b> powerpoint review of selected topic							
<b>Learning outcomes:</b> The goal of this course is to make an overview of methods used for fabrication of nanostructures and nanodevices.							
<b>Brief outline of the course:</b> This course teaches student about methods for fabrication of microelectromechanical devices, microanalytical devices and nanoobjects using top-down methods. I will make an overview of forces acting upon nanoobjects, thermodynamics on nanoscale. Overview of thin film preparation methods will be also given. I will talk about conventional and unconventional nanopatterning methods. Also application of nanostructures in fundamental and applied science will be described. Part of this course is also laboratory practice.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Science	
<b>Course ID:</b> ÚFV/ FMT/07	<b>Course name:</b> Physics of Materials
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture <b>Recommended course-load (hours):</b> <b>Per week:</b> 3 <b>Per study period:</b> 42 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 4	
<b>Recommended semester/trimester of the course:</b> 2.	
<b>Course level:</b> II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> 70% written test 30% exam	
<b>Learning outcomes:</b> The course gives basic information about Physics of Metals. Main topics are: diffusion in metals, classification of surfaces, models of grain boundary, segregation kinetics, dislocations, plastic deformation.	
<b>Brief outline of the course:</b> Imperfections in crystal lattice. Diffusion in metals: 1st and 2nd Fick's laws, diffusion coefficient, solution of Ficks' laws for different marginal conditions, Kirkendall effect, diffusion-controlled growth of precipitates, up-hill diffusion, diffusion in dilute and alloy systems. Experimental methods of diffusion coefficient determination. Classification of surfaces, models of grain boundary. Grain boundary segregation in solids: equilibrium segregation (McLean's and Guttman's models), site competition effect, non-equilibrium segregation, segregation kinetics. Dislocations: classification, properties, movement and dislocation reactions. Dislocation structure in bcc, fcc and hcp lattice. Elastic deformation. Elastic stretching. Plastic deformation. Mechanism of strain hardening. Mechanical properties and behaviour. Creep, Stress, Rupture and Stress Corrosion.	
<b>Recommended literature:</b> 1. Heumann: Diffusion in Metallen, Springer-Verlag, Berlin 1992 (in German). 2. W. Cahn and P. Haasen: Physical Metallurgy, Elsevier Science Publishers, Amsterdam 1996. Shewmon: Diffusion in solids, TMS, Warrendale 1989. 3. D.R. Askeland, P. Phulé, The Science and Engineering of Materials, Thomson, 2003.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice					
<b>Faculty:</b> Faculty of Science					
<b>Course ID:</b> ÚFV/ RPM/14		<b>Course name:</b> Relaxation processes in molecular magnets			
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 <b>Per study period:</b> 28 <b>Course method:</b> present					
<b>Number of ECTS credits:</b> 2					
<b>Recommended semester/trimester of the course:</b> 1., 3.					
<b>Course level:</b> II.					
<b>Prerequisites:</b>					
<b>Conditions for course completion:</b> Discussion accompanied with the preparation and presentation of a short project					
<b>Learning outcomes:</b> Student obtains basic knowledge about the dynamics of the energy transport between a lattice and spins, so called relaxation phenomena, demonstrating in spectroscopy, ac susceptibility, ac calorimetry, thermal conductivity, etc.					
<b>Brief outline of the course:</b> Spin-spin interactions. Interaction of spin with electromagnetic field. Spin-lattice relaxation due to phonons – Waller's mechanism. Spin-lattice relaxation due to crystal field modulation. Direct process. Orbach process. Raman process of the first and second order. Phonon bottleneck effect. Thermally activated magnetic relaxation. Superparamagnetism. Neél-Arrhenious law. Blocking temperature. Relaxation due to quantum tunnelling. Thermally assisted quantum tunnelling. Relaxation processes due to localized modes. E' centres. „Rattling“ modes. Optical modes. Casimir and du Pré theory. Ac susceptibility. Cole-Cole diagram. Debye relaxation. Distribution of relaxation times. Examples of spin-lattice relaxation in molecular and single-ion magnets. Observation of relaxation phenomena using various experimental techniques.

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Science	
<b>Course ID:</b> ÚFV/ SKM/14	<b>Course name:</b> Scanning probes microscopy of nanostructures
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 <b>Per study period:</b> 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 3	
<b>Recommended semester/trimester of the course:</b> 2.	
<b>Course level:</b> II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> exam	
<b>Learning outcomes:</b> The students will learn about various methods of visualization and fabrication of nanostructures on surfaces.	
<b>Brief outline of the course:</b> Historical overview of microscopy, resolution limits of optical microscopy. Scanning and transmission electron microscopy – principles and applications. Basics of tunneling spectroscopy, local density of electron states, molecular orbitals. Scanning tunneling microscopy of molecules and organic nanostructures. Principles of atomic force microscopy, imaging of organic nanostructures. Force curves method. Overview and basic principles of various other scanning probes microscopies (magnetic force microscopy, Kelvin probe microscopy, electrochemical scanning tunneling microscopy, scanning near-field optical microscopy etc.). Scanning probe microscopy at low temperatures and in ultra-high vacuum. Dynamic visualization by scanning probe microscopies. Manipulation of nanostructures using scanning probe microscopies. The course includes practical demonstrations of some of the discussed techniques in the laboratory.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice					
<b>Faculty:</b> Faculty of Science					
<b>Course ID:</b> ÚFV/ SPE1/03		<b>Course name:</b> Solid State Spectroscopy			
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 3 / 1 <b>Per study period:</b> 42 / 14 <b>Course method:</b> present					
<b>Number of ECTS credits:</b> 5					
<b>Recommended semester/trimester of the course:</b> 3.					
<b>Course level:</b> II.					
<b>Prerequisites:</b>					
<b>Conditions for course completion:</b> Exam interview.					
<b>Learning outcomes:</b> Explanation of the principles of Mössbauer spectroscopy, infrared spectroscopy and radiospectroscopy (electron paramagnetic resonance, nuclear magnetic resonance). The theoretical knowledge will be completed by the work in research laboratories.					
<b>Brief outline of the course:</b> Mössbauer spectroscopy: Mössbauer effect. Hyperfine coupling. Electric monopole and quadrupole, and magnetic dipole interactions. Mössbauer spectroscopy, analysis of Mössbauer spectra – intensity and width of lines, isomer shift, quadrupole splitting and magnetic splitting. Infrared spectroscopy: Harmonic and anharmonic oscillator. Vibrational spectra. IR spectrometers, techniques, sample preparation. NMR/EPR spectroscopy: Electron spin. Crystal field. Electron spectra and transitions. EPR technique. Interactions of nuclei with magnetic and electric fields. Nuclear paramagnetism. Continual wave and pulse nuclear magnetic resonance techniques. Relaxation processes in nuclear spin system. One dimensional <sup>1</sup> H and <sup>13</sup> C NMR of liquid samples. Two-dimensional NMR spectra. Principles, measuring techniques. Solid-state NMR. NMR of ferromagnetics.					
<b>Recommended literature:</b> 1. Dickson P.E., Berry F.J.: Mössbauer spectroscopy. Cambridge University Press, London 1986. 2. Slichter C. P.: Principles of Magnetic Resonance, Springer-Verlag, London, 1990.

<b>Course ID:</b> ÚTVŠ/ TVa/11	<b>Course name:</b> Sports Activities I.
<b>Course type, scope and the method:</b> <b>Course type:</b> Practice <b>Recommended course-load (hours):</b> <b>Per week: 2 Per study period: 28</b> <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 1.	
<b>Course level:</b> I., I.II., II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> Conditions for course completion: Min. 80% of active participation in classes.	
<b>Learning outcomes:</b> Learning outcomes: Increasing physical condition and performance within individual sports. Strengthening the relationship of students to the selected sports activity and its continual improvement.	
<b>Brief outline of the course:</b> Brief outline of the course: Within the optional subject, the Institute of Physical Education and Sports of Pavol Jozef Šafárik University provides for students the following sports activities: aerobics, basketball, badminton, floorball, yoga, pilates, swimming, body-building, indoor football, self-defence and karate, table tennis, sports for unfit persons, streetball, tennis, and volleyball. In the first two semesters of the first level of education students will master basic characteristics and particularities of individual sports, motor skills, game activities, they will improve level of their physical condition, coordination abilities, physical performance, and motor performance fitness. Last but not least, the important role of sports activities is to eliminate swimming illiteracy and by means of a special program of medical physical education to influence and mitigate unfitness. In addition to these sports, the Institute offers for those who are interested winter and summer physical education trainings with an attractive program and organises various competitions, either at the premises of the faculty or University or competitions with national or international participation.

<b>Course ID:</b> ÚFV/ FPO/14		<b>Course name:</b> Surface science			
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 <b>Per study period:</b> 28 <b>Course method:</b> present					
<b>Number of ECTS credits:</b> 3					
<b>Recommended semester/trimester of the course:</b> 1.					
<b>Course level:</b> II.					
<b>Prerequisites:</b>					
<b>Conditions for course completion:</b> report from selected scientific problems, exam					
<b>Learning outcomes:</b> The goal of this course is to introduce student to theory and physical properties of surfaces, processes and phenomena on surfaces and methods used for their study.					
<b>Brief outline of the course:</b> In the introduction i will make general overview of terminology in physics of surfaces, electronic structure of solids with application to surfaces. I will make detailed overview of experimental methods used for surface characterization. Student will learn about theory of adsorption and diffusion on surfaces, with thermodynamics and kinetics of processes on surfaces and growth of layers. I will show examples of physical and chemical processes on surfaces in real applications. Student will gain basic knowledge about theory of interfaces and about processes stimulated by laser and electrons and about manipulation on surfaces on nanoscale.

<b>Course type, scope and the method:</b> <b>Course type:</b> Practice <b>Recommended course-load (hours):</b> <b>Per week: Per study period:</b> 36s <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b>	
<b>Course level:</b> I., II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> Conditions for course completion: Attendance Final assessment: continuous fulfilment of all tasks within the course	
<b>Learning outcomes:</b> Learning outcomes: Students will be familiarized with principles of safe stay and movement in extreme natural conditions as they will obtain theoretical knowledge and practical skills to solve the extraordinary and demanding situations connected with survival and minimization of damage to health. The course develops team work and students will learn how to manage and face the situations that require overcoming of obstacles.	
<b>Brief outline of the course:</b> Brief outline of the course: Lectures: 1. Principles of behaviour and safety for movement and stay in unknown mountains 2. Preparation and leadership of tour 3. Objective and subjective danger in mountains 4. Principles of hygiene and prevention of damage to health in extreme conditions Exercises: 1. Movement in terrain, orientation and navigation in terrain (compasses, GPS) 2. Preparation of improvised overnight stay 3. Water treatment and food preparation.

<b>Number of ECTS credits:</b> 3	
<b>Recommended semester/trimester of the course:</b> 1.	
<b>Course level:</b> II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> 50 % maintained output, written test 50% final output, wtitten test	
<b>Learning outcomes:</b> The course gives information about principles of solidification, precipitatin. Thermodynamics of phase transitions, Plastic deformation, strethenning and Racrystallisation and Hot working	
<b>Brief outline of the course:</b> Principles of solidification: solidification defects, casting processes for manufacturing components, ingot casting, directional solidification, single crystal growth and epitaxial growth, joining of metallic materials. Solid solutions and phase equilibrium: phase diagrams,solubility and solutions, solid-solution strengthening. Relationship between properties and phase diagram. Nonequilibrium solidificatin and segregation. Dispersion strengthening and eutectic phase diagram: intermetallic compounds, eutectic phase diagram, eutectic alloys. Dispersion strengthening by phase transformations and heat treatment: nucleation and growth in solid-state reactions, precipitation hardening, age hardening, eutectoid reaction – pearlite, bainite and martensitic reaction, Strain hardening snd annealing. Hot working, recrystallisation. Superplastic forming. Ferrous alloys.

<b>University:</b> P. J. Šafárik University in Košice					
<b>Faculty:</b> Faculty of Science					
<b>Course ID:</b> ÚFV/ TKL1/99		<b>Course name:</b> Theory of Condensed Matter			
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 4 / 2 <b>Per study period:</b> 56 / 28 <b>Course method:</b> present					
<b>Number of ECTS credits:</b> 8					
<b>Recommended semester/trimester of the course:</b> 1.					
<b>Course level:</b> II.					
<b>Prerequisites:</b>					
<b>Conditions for course completion:</b> Successful passing of the final oral exam.					
<b>Learning outcomes:</b> To manage basic methods of quasiparticle formalism of Solid State Physics (electrons, phonons, electron-electron, electron-phonon interactions, magnons)					
<b>Brief outline of the course:</b> Born-Openheimer and Hartree-Fock aproximatins. The structure of solids and its theoretical description. The ideal crystal, direct and recipcal lattice. Brawaiss elementary cell. Electron in a periodic potential field, Bloch's theorem. Born-Karmán boundary conditions, Brillouin zones. Nearly free electron theory. Tight binding approximation. Existence of energy bands. Effective mass tensor. Lattice waves. Dynamical matrix. Linear monoatomic and diatomic lattices. Acoustic and optical modes. Phonons in solids. Electron-phonon interactions. The Fröhlich Hamiltonian. The attractive interaction between electrons.					
<b>Recommended literature:</b> [1.] Ch. Kittel: Quantum Theory of Solids, John Wiley & Sons Inc, 1985. [2.] N.W. Ashcroft, N.D. Mermin: Solid State Physics, Harcourt College Publishers, 1976. [3.] P.L. Taylor: A Quantum Approach to the Solid State, Prentice-Hall, Inc., Englewood Cliffs, New Jersey, 1970. [4.] J.M. Ziman, Principles of the Theory of Solids, University Press, Cambridge, 1972. [5.] A.O.E. Animalu, Intermediate Quantum Theory of Crystalline Solids, Prentice-Hall, Inc., Englewood Cliffs, New Jersey, 1981.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice					
<b>Faculty:</b> Faculty of Science					
<b>Course ID:</b> ÚFV/ TVKL/14		<b>Course name:</b> Transport properties of condensed matter			
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 1 <b>Per study period:</b> 28 / 14 <b>Course method:</b> present					
<b>Number of ECTS credits:</b> 4					
<b>Recommended semester/trimester of the course:</b> 2.					
<b>Course level:</b> II.					
<b>Prerequisites:</b>					
<b>Conditions for course completion:</b> successful passing final exam					
<b>Learning outcomes:</b> To provide to students the basic knowledge about the theory of transport phenomena in solids. To teach students to apply theoretical knowledge for a description of real systems.					
<b>Brief outline of the course:</b> Occupation number representation. Second quantization for bosons and fermions. Equilibrium distribution of electrons in metals. Density of states. Boltzmann equation. Electrical conductivity. Galvanomagnetic phenomena. Thermal conductivity. Thermoelectric phenomena. Relaxation time and scattering processes. Electron-phonon interaction and scattering on acoustic phonons. Scattering on ionised impurity atoms. Superconductivity.					
<b>Recommended literature:</b> J. M. Ziman, Electron and Phonons: The Theory of Transport Phenomena in Solids, Electrons and Phonons: The Theory of Transport Phenomena in Solids, Oxford (2001).					
<b>Course language:</b> slovak, english					
<b>Notes:</b>

<b>University:</b> P. J. Šafárik University in Košice					
<b>Faculty:</b> Faculty of Science					
<b>Course ID:</b> ÚFV/ FTV/06		<b>Course name:</b> Vacuum Physics			
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 <b>Per study period:</b> 28 <b>Course method:</b> present					
<b>Number of ECTS credits:</b> 4					
<b>Recommended semester/trimester of the course:</b> 3.					
<b>Course level:</b> II.					
<b>Prerequisites:</b>					
<b>Conditions for course completion:</b> Final test exam					
<b>Learning outcomes:</b>					
<b>Brief outline of the course:</b> Overview of basic topics in vacuum physics - volume transport properties of gas, gas flow, gas on solids. Principles of the measurement and creation of low pressure conditions. Basics of the vacuum equipment construction and the leak-tightness testing. The use of vacuum technology in advanced material preparation and cryogenics.					
<b>Recommended literature:</b> J.F. O'Hanlon, A User's Guide to Vacuum Technology, Wiley-Interscience; 2003;					
<b>Course language:</b>
