Course type, scope a Course type: Lectur Recommended cou Per week: 2 Per stur Course method: pro	re rse-load (hours): ıdy period: 28					

Number of ECTS credits: 5

Recommended semester/trimester of the course: 2., 4.

Course level: III.

Prerequisities: ÚFV/MSA1/03

Conditions for course completion:

75% written test

25% the ppt presentation from selected topic

Learning outcomes:

To obtain knowledges about frontier microskopic techniques and XRD techniques for structural analysis of materials.

Brief outline of the course:

New trends in Optic microscopy, Electron microscopy, Electron diffraction. Electron microprobe analysis: WDX spectrometer, EDX spectrometer, Auger spectroscopy. Self-emision microscopy. Modern electron diffracion methods (CBD, nanodiffraction), X-ray diffractometry, phase and profile analysis. Synchrotron radion: sources and application of SR in material science research, neutron scattering , Small angle scattering. Modern methods of surface observation: STM, AFM. Synchrotron radiation in material science research.

Recommended semester/trimester of the course: 2., 4.						
Course level: II., III.						
Prerequisities:						

Conditions for course completion:

Test or preparation of the ppt presentation on a selected topic in the field of nanomaterials.

Learning outcomes:

To acquaint students with the basic concepts of nanotechnology and to bring them knowledge about physical and chemical properties of nanomaterials. Provide students with a comprehensive view of the wide applications using nanomaterials.

Brief outline of the course:

Recommended literature:

- 1. Nanoscience and nanotechnologies, The Royal Society, London 2004.
- 2. C. Burda, X. Chen, et al., Chemical Review 105, (2005) 1025-1102.
- 3. J. A. Mydosh, Spin glasses, Taylor and Francis 1993.

Course language:

Notes:

During the course will be presented also the latest scientific results about nanomaterials obtained during the research project

APVV-0132-11 (Unconventional quantum states in nanoscopic magnetic systems)

APVV-0073-14 (magnetocaloric effect in quantum and nanoscopic systems)

VEGA 1/0861/12 (The effect of the interaction of particles in the ferromagnetic iron-based magnetic properties of the composite material), VEGA-1/0377/16

workplaced in KFKL, UFV, PF UPJŠ.

During exercise will be used the most modern research infrastructure solutions purchased for scientific projects.

RNDr. Adriana Zeleňáková, PhD., prof. RNDr. Peter Kollár, DrSc., doc. RNDr. Ján Füzer, PhD.	Number of ECTS cr	edits: 5	
Prerequisities: Conditions for course completion: Active participation and preparing of measurement protocols. Learning outcomes: The objectives of the laboratory are: a. To gain some physical inside into some of the concepts presented in the lectures. b. To gain some practice in data collection, analysis and interpretation of resumance. c. To gain experience and report writing presentation and results. Brief outline of the course: Measurement of basic magnetic properties at ac and dc magnetisation, domain structure observation. Measurement of magnetic properties using a SQUID magnetometer. Measurement of the dynamics of domain walls and measurement of magnetostriction. Recommended literature: Tumanski S, Handbook of magnetic measurements, CRC press, 2011. Fiorillo F, Characterization and Measurement of Magnetic Materials, Elsevier, 2004.
