Provides: Doc. PhDr. Peter Nezník, CSc.					
Date of last modification: 12.02.2020					
Approved: prof. RNDr. Michal Jaščur, CSc.					

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice					
Faculty: Faculty of Science					
Course ID: ÚFV/ APR/13		Course name: Astronomical Instruments			
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 3 / 1 Per study period: 42 / 14 Course method: present					
Number of ECTS credits: 5					
Recommended semester/trimester of the course: 1.					
Course level: II.					
Prerequisites:					
Conditions for course completion: 2 tests during term. Each test for 15 points. Minimal amounts of points for an exam is 20. Oral examination and test.					
Learning outcomes: Acquaint students with construction of astronomical telescopes, correction of optica errors and light detectors in different spectral regions.					
Brief outline of the course: Principles of geometrical optics, optical errors and their corrections, types of telescopes and their construction, radio-telescopes, satellite UV and X-ray telescopes, detectors of the light: CCD, CMOS, principles of photometry, spectroscopy and polarimetry.					
Recommended literature: 1. Howell : 2000, Handbook of CCD Astronomy, Cambridge University Press. 2. Cheng, J.: 2009, The Principles of Astronomical Telescope Design, Springer-Verlag 3. Lena et al.: 1996, Observational Astrophysics, Springer-Verlag 4. Martinez a Klotz: 1998, A practical giude to CCD Astronomy, Cambridge University Press. 5. COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice					
Faculty: Faculty of Science					
Course ID: ÚFV/ BSIM1/14		Course name: Biomolecular Simulations			
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present					
Number of ECTS credits: 5					
Recommended semester/trimester of the course: 2.					
Course level: II.					
Prerequisites:					
Conditions for course completion: Elaboration and presentation of the project on given actual subject. Development of own computer programs on project given at the exercises. Exam. Might be substituted by written exam including Q/A part.					
Learning outcomes: Introduction to actual problematics of biomolecular simulations.					
Brief outline of the course: Structural characteristics of biological polymers. Foldamers. Central dogma of molecular biology as flow of biological information. 3D-structure and function of foldamers. Recent view on enzyme mechanisms. Experimental methods of structure determination and their limitations. Empirical force fields and methods of classical molecular dynamics. Molecular dynamics and Monte Carlo methods - algorithms and paralelization. <i>Ab initio</i> molecular dynamics and hybrid approaches. Computational challenges in biomolecular simulations - simulations of chemical reactions, free energy evaluation, protein folding. Computational complexity, nontraditional approaches and heuristic approaches.					
Recommended literature: Actual literature recommended by lecturer.

Number of ECTS credits: 5					
Recommended semester/trimester of the course: 1.					
Course level: II.					
Prerequisites:					
Conditions for course completion: 2 tests in the range of calculated examples on the exercises each for 10 point. Minimal amounts of points for an exam is 10. Oral exam					
Learning outcomes: Acquaint students with foundations of the celestial mechanics, solution of two body problem and its application to bodies of the Solar system.					
Brief outline of the course: Problem of two bodies; Kepler's laws; shape of orbit; position of body in orbit; velocity of body in orbit; Kepler's equation; elements of orbit; transformation of coordinates; determination of ephemeris; description of orbits of Solar system bodies.					
Recommended literature: 1. Andrlé P., Základy nebeské mechaniky. Academia, Praha, 1971 2. Brouwer D., Clemence G. M.: Methods of Celestial Mechanics, Academia Press, New York and London, 1961 3. COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ NME2/13	Course name: Celestial Mechanics II
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 1 Per study period: 28 / 14 Course method: present	
Number of ECTS credits: 5	
Recommended semester/trimester of the course: 2.	
Course level: II.	
Prerequisites: ÚFV/NME1/13	
Conditions for course completion: solution of selected problems (exercises) Exam	
Learning outcomes: The students gain the basic knowledge to be able to solve the celestial-mechanics problems of interaction between three and more bodies, or a body, which moves in a central, spherically symmetric potential (e.g. the potential of the Sun) is perturbed by another agent or agents. In other words, the students learn to perform a numerical integration of orbits of "n" bodies.	
Brief outline of the course: I. Equations of motion for "n" material bodies, II. Restricted three-body problem, equations in the non-rotating frame, equations in the rotating coordinate frame, Jacobi integral, surfaces and curves of zero velocity (Hill surfaces), Lagrange libration points, Tisserand criterion III. Numerical integration of orbits, perturbation function, Evarhart's integrator GAUSS-RADAU (RA15), symplectic "Leap-frog" integrator. IV. Method of variation of constants, Langrange brackets, Whittaker method of the detemination of Lagrange brackets, Lagrange equations, Lagrange equations for canonical elements, Gauss form of the Lagrange equations.	
Recommended literature: Puankare A.: Lekcii po nebesnoj mechanike. Nauka, Moskva, 1965. Andrle P.: Základy nebeské mechaniky. Academia, Praha, 1971. Boccaletti D., Pucacco G.: Theory of Orbits (Vol. 1 and Vol. 2), Springer, Berlin, 2001. Brouwer D., Clemence G.M.: Methods of Celestial Mechanics. Academia Press, New York and London, 1961. Brauer D., Klemens Dž.: Metody nebesnoj mechaniki. Mir, Moskva, 1964. Everhart E.: An efficient integrator that uses Gauss-RADAU spacings. In: Dynamics of Comets: Their Origin and Evolution, eds. A. Carusi and G. B. Valsecchi, Reidel, Dordrecht, pp. 185\$-\$202. Roy A.E.: Orbital Motion. Adam Hilger Ltd., Bristol, 1978. Roj A.: Dviženije po orbitam. Mir, Moskva, 1981.

Recommended semester/trimester of the course: 2.					
Course level: II.					
Prerequisites:					
Conditions for course completion: Software project and its presentation. Oral examination					
Learning outcomes: Inform students of astronomy as well as other interested people about basic numerical methods used in astronomy and astrophysics, give them basic informations about problems of scientific writing and basic work with astronomical packages					
Brief outline of the course: Introduction to LaTeX system., Sources of astronomical informations on web, VIZIER, NASA ADS Abstract Service. FITS format of astronomical data. Reduction of CCD and photoelectric photometry Introduction to MIDAS and IRAF. Numerical procedures for JD computation, stellar time, air mass, reduction of precession, nutation, aberation, refraction and proper motion. Heliocentric and barycentric correction of time and velocity. Period determination in astronomical data. Transformation of photometric systems and calibration of spectra. Minima times determinations.

Recommended semester/trimester of the course: 1.					
Course level: I., II.					
Prerequisites:					
Conditions for course completion: Continuous evaluation is based on students' activity in the classroom and work on assignments. Examination and assignments submitted electronically with the attached computer code.					
Learning outcomes: To teach students to create simulation projects to help to solve physical problems.					
Brief outline of the course: Advanced methods of Monte Carlo (MC) simulations of lattice spin systems. Local and cluster perturbation algorithms. Errors and histogram analysis of MC data. Reweighting by simple and histogram methods. Universality and finite-size scaling. Determination of order of phase transitions and calculation of critical exponents. Basics of quantum MC simulations. MC simulations of stochastic processes. Diffusion equation. Stochastic processes in financial analysis. Basics of molecular dynamics method.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ EKF/04	Course name: Econophysics
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 1 Per study period: 28 / 14 Course method: present	
Number of ECTS credits: 4	
Recommended semester/trimester of the course: 3.	
Course level: II.	
Prerequisites:	
Conditions for course completion: Continuous evaluation is based on students' activity in the classroom and work on assignments. Examination	
Learning outcomes: To teach student to employ the aquired knowledge from physics in different disciplines such as economy and sociology.	
Brief outline of the course: Introduction. Pareto and Bachelier approach. The physical "philosophy" in the formulation of models of social and economic models. The system of measurable quantities in economy, the logarithmic price, the uints of time and price in economy. The stochastic models, random processess and distribution functions, stability of distributions, infinitely divisible process, scaling of distribution functions, Gauss and Lévy distribution, the simulation of random processes via computer. Selected parallels between economy and fluid turbulence, market volatility and intermittence. Correlations of markets, the markets in mutual correlations and anticorrelations. Autocorrelations and analysis of time series. Portfolio taxonomy and the strategy of the joining of enterprises and formation of corporations. Computer modeling of GARCH and ARCH random processes with variable dispersion of volatility. Models based on the stochastic diferential equations, Black-Scholes model of the rational option price.	
Recommended literature: 1. An Introduction to Econophysics: Correlations and Complexity in Finance, R. N. Mantegna, H. E. Stanley, Cambridge University Press 2000. 2. The Statistical Mechanics of Financial Markets, J. Voit, Springer 2003. 3. Econophysics: An Introduction, Sitabhra Sinha, A. Chatterjee, A. Chakraborti, B. K. Chakrabarti, Wiley VCH 2011.

Recommended semester/trimester of the course: 2.					
Course level: II.					
Prerequisites:					
Conditions for course completion: Continuous elaboration of homework during the semester. During the oral exam five random homework problems are selected and their physical content will be discussed. Based on the answers final mark will be given.					
Learning outcomes:					
Brief outline of the course: Overview of the special theory of relativity (STR). Uniformly accelerated motion in STR. Local principle of equivalence - Eotvos experiment. Tensor calculus in pseudoriemann's metric. Einstein equations of gravitational field. Schwarzschild's solution for spherically symmetric field. Experimental tests of the general theory of relativity. Black holes. Solutions for homogeneous and isotropic distribution of mass. Cosmological applications.

Course ID: ÚFV/ MKL/03		Course name: Magnetic Properties of Solids					
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 4 Per study period: 56 Course method: present							
Number of ECTS credits: 6							
Recommended semester/trimester of the course: 2.							
Course level: II., III.							
Prerequisites:							
Conditions for course completion: Elaboration of written texts. Distance oral exam.							
Learning outcomes: To obtain a general view on basic magnetic phenomena, intrinsic magnetic properties of various magnetic materials, magnetization processes and domain structure.							
Brief outline of the course: Magnetic materials and magnetization. Magnetic quantities. Carriers of magnetic moment. Vector model of the atom. Magnetic field sources. Measurements of magnetic field. Diamagnetism. Paramagnetism. Ferromagnetism. Antiferromagnetism. Ferrimagnetism. Magnetic behavior and structure of materials. Neutron diffraction. Magnetic anisotropy. Hall effect, magnetoresistance. Domain structure. Magnetostriction. Technical magnetization. Dynamic magnetization processes. Susceptibility. Thin films.							
Recommended literature: S. Chikazumi: Physics of Magnetism, Oxford University Press 2009 D. Jiles: Introduction to magnetism and magnetic materials, Chapman&Hall, London, New York, Tokyo, Melbourne, Madras, 1991

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ NSF/10	Course name: Non-Equilibrium Statistical Physics
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 1 Per study period: 28 / 14 Course method: present	
Number of ECTS credits: 5	
Recommended semester/trimester of the course: 3.	
Course level: II.	
Prerequisites:	
Conditions for course completion:	
Learning outcomes: To give basic knowledges about modern trends and theoretical methods in description of non-equilibrium phenomena in physics.	
Brief outline of the course: Problems of kinetic theory - formulations of basic tasks. Distribution function. Liouville theorem. Liouville operator. Kinetic Boltzman equation. H-theorem. Maxwell distribution. Transport phenomena. Conservation laws. Derivation of the macroscopic equations in leading and next-to-leading approximation. Hydrodynamic approximation. Set of equations for density, mean velocity and temperature. Derivation of continuity equation, Navier-Stokes equation, heat conductivity equation. Derivation of viscosity and diffusivity coefficients from microscopic description. Stokes laws. Reynolds number. Dynamical derivation of kinetic equation. Liouville (master) equation for N-particle distribution function. Bogolyubov set of equations for distribution functions. Principle of weakening of statistical correlations. Equation for one-particle distribution function. Brown motion. Langevin equation. Fokker-Planck equation and specific tasks.	
Recommended literature: 1. Landau L.D., Lifshitz E.M.: Teoreticheskaja fizika X: Lifshitz E.M., Pitaevskij L.P.: Fizicheskaja kinetika, Moskva, Fizmatlit 2002 2. K. University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ NOT1a/03	Course name: Nontraditional Optimization Techniques I
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present	
Number of ECTS credits: 5	
Recommended semester/trimester of the course: 1.	
Course level: I., II.	
Prerequisites:	
Conditions for course completion: Monitoring progress in solving applied projects. examination (50%), quality of the project (50%) examination	
Learning outcomes: To familiarize students with biologically and physically inspired optimization, simulation and prediction techniques. To expand students' creativity and programming skills by applying heuristic techniques in solving applied problems.	
Brief outline of the course: Fundamentals of optimization theory. Basic optimization problems. Basic types of objective functions. Classification of optimization techniques. Gradient-based optimization techniques. Evolutionary algorithms. Genetic algorithms. Genetic algorithms as Markov processes. Statistical Mechanics Approximations of Genetic Algorithms. Monte Carlo simulation and simulated annealing. Swarm optimization. Cellular Automata and their applications in simulations of complex systems. Fractals. Agent-based models. Evolutionary games. Evolution of cooperation. Fundamentals of Neural Networks. Application of singular value decomposition to solve least squares problems.

Number of ECTS credits: 5					
Recommended semester/trimester of the course: 2.					
Course level: I., II.					
Prerequisites:					
Conditions for course completion: Presentation of the project in written form. Oral exam and discussion of the presented project. Should corona-virus quarantine persist, written report and answer to posed questions suffice.					
Learning outcomes: By using examples from the biology to learn applications of optimization techniques on study and interpretation of complex systems. Introduction to new paradigms in the area of systems biology, including parasite/host coevolution.					
Brief outline of the course: Complex systems, emergent behavior. Evolutionary theory and memetics. Application of optimization techniques on complex systems. Application of methods /genetic algorithms, simulated annealing, taboo search/ on selected problems of biomolecular simulations. Molecular dynamics, protein folding. Population dynamics, metabolic networks and complexity in bioinformatics.

Course ID: ÚFV/ KTP1a/03		Course name: Quantum Field Theory I			
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 3 / 1 Per study period: 42 / 14 Course method: present					
Number of ECTS credits: 6					
Recommended semester/trimester of the course: 1.					
Course level: II.					
Prerequisites:					
Conditions for course completion: homeworks; their presentation and common analysis of problem under consideration, exam					
Learning outcomes: To offer basic knowledges about modern trends and theoretical methods in description of microword and phenomena in physical systems with infinite degrees of freedom.					
Brief outline of the course: Conception of relativistic quantum field. Particles as quantum fluctuations of this field. Lagrange formalism. Symmetries and related conservation laws for currents. Euler-Lagrange equations. Basic fields - scalar, spinor, electromagnetic and vector. Equations for free classical fields - Klein-Gordon and Dirac equations, Maxwell equations. Lagrangeans and Hamiltonians for these fields. Quantization of free fileds. Basic commuting and anticommutating relatios for free quantum fields.					
Recommended literature: Bogoljubov N.N., Širkov D.V.: Vvedenie v teoriiu kvantovannyh polej, Moskva, 1957 (prvé vydanie); Moskva, Nauka 1984 (4. Vydanie). Faculty: Faculty of Science	
Course ID: ÚTVŠ/ ÚTVŠ/CM/13	Course name: Seaside Aerobic Exercise
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: Per study period: 36s Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course:	
Course level: I., II.	
Prerequisites:	
Conditions for course completion: Conditions for course completion: Attendance	
Learning outcomes: Learning outcomes: Students will be provided an overview of possibilities how to spend leisure time in seaside conditions actively and their skills in work and communication with clients will be improved. Students will acquire practical experience in organising the cultural and art-oriented events, with the aim to improve the stay and to create positive experiences for visitors.	
Brief outline of the course: Brief outline of the course: 1. Basics of seaside aerobics 2. Morning exercises 3. Pilates and its application in seaside conditions 4. Exercises for the spine 5. Yoga basics 6. Sport as a part of leisure time 7. Application of projects of productive spending of leisure time for different age and social groups (children, young people, elderly) 8. Application of seaside cultural and art-oriented activities in leisure time

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice					
Faculty: Faculty of Science					
Course ID: ÚFV/ FSL1/13		Course name: Solar Physics			
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 4 Per study period: 56 Course method: present					
Number of ECTS credits: 6					
Recommended semester/trimester of the course: 2.					
Course level: II.					
Prerequisites:					
Conditions for course completion: solved exercises Exam					
Learning outcomes: To give students a comprehensive, physical 'up-to date' image of the sun from the deepest central area to the visible surface, solar atmosphere and the effects of the solar activity on the interplanetary space. To show an importance of the solar physics for understanding the evolution of stars and other areas of astrophysics.					
Brief outline of the course: Preliminary definitions and assumptions, basic facts about the sun, solar interior, solar atmosphere. magnetic fields and the dynamics of the Sun, The Standard Solar Model, solar activity, solar cycle.					
Recommended literature: Zirin, H., Astrophysics of the Sun, Cambridge Univ. Press, Cambridge, 1988 Physics of the Sun I. II. III. Geophysics and Astrophysics Monographs, eds: P.A. Sturrock, T. E. Holzer, D.M. Mihalas, R.K. Ulrich, Riedel Publ. Dodrecht 1968 M. Stix: The Sun, An Introduction, Springer, 2nd edition, 2002. E. R. Priest: Solar Magnetohydrodynamics, Reidel, 1982. K. R. Lang: The Sun from Space, Springer, 2000.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚTVŠ/ TVa/11	Course name: Sports Activities I.
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 1.	
Course level: I., I.II., II.	
Prerequisites:	
Conditions for course completion: Conditions for course completion: Min. 80% of active participation in classes.	
Learning outcomes: Learning outcomes: Increasing physical condition and performance within individual sports. Strengthening the relationship of students to the selected sports activity and its continual improvement.	
Brief outline of the course: Brief outline of the course: Within the optional subject, the Institute of Physical Education and Sports of Pavol Jozef Šafárik University provides for students the following sports activities: aerobics, basketball, badminton, floorball, yoga, pilates, swimming, body-building, indoor football, self-defence and karate, table tennis, sports for unfit persons, streetball, tennis, and volleyball. In the first two semesters of the first level of education students will master basic characteristics and particularities of individual sports, motor skills, game activities, they will improve level of their physical condition, coordination abilities, physical performance, and motor performance fitness. Last but not least, the important role of sports activities is to eliminate swimming illiteracy and by means of a special program of medical physical education to influence and mitigate unfitnes. In addition to these sports, the Institute offers for those who are interested winter and summer physical education trainings with an attractive program and organises various competitions, either at the premises of the faculty or University or competitions with national or international participation.

Course ID: ÚTVŠ/ KP/12	Course name: Survival Course
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: Per study period: 36s Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course:	
Course level: I., II.	
Prerequisites:	
Conditions for course completion: Conditions for course completion: Attendance Final assessment: continuous fulfilment of all tasks within the course	
Learning outcomes: Learning outcomes: Students will be familiarized with principles of safe stay and movement in extreme natural conditions as they will obtain theoretical knowledge and practical skills to solve the extraordinary and demanding situations connected with survival and minimization of damage to health. The course develops team work and students will learn how to manage and face the situations that require overcoming of obstacles.	
Brief outline of the course: Brief outline of the course: Lectures: 1. Principles of behaviour and safety for movement and stay in unknown mountains 2. Preparation and leadership of tour 3. Objective and subjective danger in mountains 4. Principles of hygiene and prevention of damage to health in extreme conditions Exercises: 1. Movement in terrain, orientation and navigation in terrain (compasses, GPS) 2. Preparation of improvised overnight stay 3. Water treatment and food preparation.

Number of ECTS credits: 8					
Recommended semester/trimester of the course: 1.					
Course level: II.					
Prerequisites:					
Conditions for course completion: Successful passing of the final oral exam.					
Learning outcomes: To manage basic methods of quasiparticle formalism of Solid State Physics (electrons, phonons, electron-electron, electron-phonon interactions, magnons)					
Brief outline of the course: Born-Openheimer and Hartree-Fock aproximatins. The structure of solids and its theoretical description. The ideal crystal, direct and recipcal lattice. Brawaiss elementary cell. Electron in a periodic potential field, Bloch's theorem. Born-Karmán boundary conditions, Brillouin zones. Nearly free electron theory. Tight binding approximation. Existence of energy bands. Effective mass tensor. Lattice waves. Dynamical matrix. Linear monoatomic and diatomic lattices. Acoustic and optical modes. Phonons in solids. Electron-phonon interactions. The Fröhlich Hamiltonian. The attractive interaction between electrons.

Number of ECTS credits: 4					
Recommended semester/trimester of the course: 2.					
Course level: II.					
Prerequisites:					
Conditions for course completion: successful passing final exam					
Learning outcomes: To provide to students the basic knowledge about the theory of transport phenomena in solids. To teach students to apply theoretical knowledge for a description of real systems.					
Brief outline of the course: Occupation number representation. Second quantization for bosons and fermions. Equilibrium distribution of electrons in metals. Density of states. Boltzmann equation. Electrical conductivity. Galvanomagnetic phenomena. Thermal conductivity. Thermoelectric phenomena. Relaxation time and scattering processes. Electron-phonon interaction and scattering on acoustic phonons. Scattering on ionised impurity atoms. Superconductivity.

Prerequisites:	
Conditions for course completion: 2 tests during term. Each test for 15 points. Minimal amounts of points for an exam is 20. Oral examination and test.	
Learning outcomes: Acquaint students with properties of variable stars, their distribution and basic characteristics, as well as give introduction to binaries, their observations and analysis of light curve and radial velocities.	
Brief outline of the course: Definition of variable stars and historical review, searching for variability and periodicity of variations. Classification of variable stars and basic parameters. Visual and spectroscopic binaries. Two body problem and orbital parameters. Roche model, mass exchange in binaries and eclipsing binaries. Period changes.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚTVŠ/ ZKLS//13	Course name: Winter Ski Training Course
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: 36 Per study period: 504 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course:	
Course level: I., II.	
Prerequisites:	
Conditions for course completion:	
Learning outcomes:
