<b>Course ID:</b> ÚGE/ DPZ/15	<b>Course name:</b> Remote Sensing
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 2 <b>Per study period:</b> 28 / 28 <b>Course method:</b> present	
<b>Number of credits:</b> 6	
<b>Recommended semester/trimester of the course:</b>	
<b>Course level:</b> II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> During the semester, students will need to hand in the outputs of the practicals. The resulting assessment is based on the final exam, which the student can undertake if he/she handed in all the required outputs of the practical according to the given criteria. The final exam is a combination of a written test and an oral examination. The student must obtain at least 90 points to get the A mark, at least 80 points to get B, at least 70 points to get C, at least 60 points to get D, at least 50 points to get E. The credits shall not be granted to a student who does not hand in one or more outputs of the practicals or he/she will get less than 50 points out of 100.	
<b>Learning outcomes:</b> The learning outcomes comprise knowledge on remote sensing methods, ability to judge appropriateness of particular remote sensing methods for geographical applications, skills of processing the remote sensing data and their interpretation.	
<b>Brief outline of the course:</b> Lectures: Introduction, key concepts, historical background of remote sensing methods. Physical principles –electromagnetic energy (EME), its properties and spectral characteristics. Interaction of EME – scattering, spectral behaviour, absorption. Spectral, temporal, spatial and radiometric resolution. Analogue image interpretation. Global navigation satellite systems. Phtogrammetry. Multispectral scanning. Active systems. Airborne laser scanning. Terrestrial laser scanning. Radar remote sensing. Practicals: Web-based data sources of remotely sensed data. Physical properties of the EME. Spectral behaviours of particular objects. Geometric parameters of aerial imagery. Planning an airborne photogrammetric and laser scanning mission. Image adjustment and false colour composite imagery. Supervised and unsupervised image classification. The work on practicals expects basic GIS skills.

<b>Conditions for course completion:</b> active participation in seminars preparation of the presentation to the given topic semestral written test oral examination					
<b>Learning outcomes:</b> The main goal of the subject is to gain basic knowledge on the functioning of the soil system with the special reference to dominant systematic groups of the soil fauna, their ecology and taxonomic identification.					
<b>Brief outline of the course:</b> The subject deals with the soil as an ecological system and type of environment It is concentrated to the ecological factors ruling the life in soil, soil-dwelling animals and their adaptations to this specific habitat. Functioning of the soil system and understanding of the principal interactions of soil fauna with plant rhizosphere and soil microflora are among the main goals of the discipline.

<b>Course type, scope and the method:</b> <b>Course type:</b> Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 <b>Per study period:</b> 28 <b>Course method:</b> present	
<b>Number of credits:</b> 3	
<b>Recommended semester/trimester of the course:</b>	
<b>Course level:</b> II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> During the semester, students will need to hand in the outputs of the practicals. The resulting assessment is based on the final practical skills verification and delivery of the outputs of practicals. From the practical skills verification, students must obtain at least 90 points to get the A mark, at least 80 points to get B, at least 70 points to get C, at least 60 points to get D, at least 50 points to get E. The credits shall not be granted to a student who does not hand in one or more outputs of the practicals or he/she will get less than 50 points out of 100.	
<b>Learning outcomes:</b> The main learning outcomes include practical skills in advanced geodata processing in open source GIS software. In particular, the skills involve data editing and advanced raster analyses with digital terrain models.	
<b>Brief outline of the course:</b> Key concepts and historical background of the open source idea, terminology and definitions. Input and graphics of a data layer, selection of the features within the data layer, creation of a new layer in Quantum GIS. Editing of the attribute table and joining external tables, cartogram and cartodiagram in Quantum GIS. Quantum GIS plug-ins, WMS and map composer. Installation and data import in GRASS GIS, generating map layouts. Basic operations with vector data in GRASS GIS. Basic operations with raster data sets in GRASS GIS. Digital terrain modelling in GRASS GIS, geomorphometric analysis. Map algebra, water flow modelling, watershed modelling. 3-D/4-D visualisation in GRASS GIS.

<b>Recommended semester/trimester of the course:</b> 1.					
<b>Course level:</b> I., II.					
<b>Prerequisites:</b>					
<b>Conditions for course completion:</b> Active participation in seminars. Preparation of oral presentation to selected topic. Semestral written test. Oral examination.					
<b>Learning outcomes:</b> The main goal of the subject is to get knowledge on the basic reasons of recent distribution of the animals on the Earth, zoogeographic regionalization of the Earth's surface and human influence on the faunal distribution in the history.					
<b>Brief outline of the course:</b> This course will review our current understanding of the patterns of animal distribution and the processes that influence distributions of species and their attributes. Zoogeography will integrate information on the historical and current ecology, genetics, and physiology of animals and their interaction with environmental processes (continental drift, climate) in regulating geographic distributions. The course will emphasize descriptive and analytical approaches useful in hypothesis testing in zoogeography and will illustrate applied aspects of zoogeography (e.g. refuge design in conservation).
