Approved: prof. RNDr. Stanislav Vokál, DrSc.					

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice					
Faculty: Faculty of Science					
Course ID: ÚFV/ AJF1/08		Course name: Applied Nuclear Physics			
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present					
Number of ECTS credits: 4					
Recommended semester/trimester of the course: 3.					
Course level: II.					
Prerequisites:					
Conditions for course completion: term project examination					
Learning outcomes: Overview of possible applications of nuclear radiation.					
Brief outline of the course: Interaction of radiation with matter. Application of nuclear radiation, new trends in medicine. Biological effects of radiation, radiation dose units, basics for limits of exposure. Nuclear methods of structural analysis. Tracer techniques. Dating. Activation analysis.

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ KZ11/03	Course name: Cosmic Rays
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 4	
Recommended semester/trimester of the course: 3.	
Course level: II.	
Prerequisites:	
Conditions for course completion: Recherche work. Final examination.	
Learning outcomes: To acquaint with the basic characteristics of cosmic rays.	
Brief outline of the course: Energetic particles in space. Origin of cosmic rays. Interaction of cosmic ray particles with the material. Detectors of cosmic rays, X rays and gamma rays. Cosmic rays in the upper layers of the atmosphere. Solar cosmic rays. Modulation and production of cosmic rays in the heliosphere. Influence of geomagnetic field on cosmic ray particles. Acceleration mechanisms of cosmic rays.

Number of ECTS credits: 8					
Recommended semester/trimester of the course: 1.					
Course level: II.					
Prerequisites:					
Conditions for course completion:					
Learning outcomes: To obtain basic knowledge of particle physics which is necessary for quantum field theory and quantum chromodynamics.					
Brief outline of the course: Definition, sources and detection of elementary particles, relativistic kinematics, history of discoveries of elementary particles, basic experiments, quark model, particle classification, particle dynamics, electromagnetic interaction, strong and weak interaction, symmetries and conservation laws, parity, charge conjugation, CP symmetry, experiments with violation of spatial and combined symmetry, physics beyond the Standard Model.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ EJF1a/04	Course name: Experimental Methods of Nuclear Physics
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 4 / 1 Per study period: 56 / 14 Course method: present	
Number of ECTS credits: 8	
Recommended semester/trimester of the course: 3.	
Course level: II.	
Prerequisites:	
Conditions for course completion: thesis exam	
Learning outcomes: Acquire basic knowledges of the principles of particle detectors, construction of large detectors complex and basis of electronics in subnuclear physics.	
Brief outline of the course: Principles and construction of particle detectors: quantities characterizing detectors. Proportional chambers, MWPC. Drift chambers, TPC. Special types of gas detectors, MSGC. Silicon detectors (pixels/strips). Scintillators and photodetectors. Methods of physical quantities measurement: Vertex detectors. Track detectors (measurement of coordinates, paths, angles, momenta). Charged particle identification (ionisation losses, time of flight ...). Calorimetry, electromagnetic and hadron calorimeters. Large detector systems, fixed target and collider experiments. Basis of electronics used in subnuclear physics (fundamental concepts, principles, requirements, specialness).	
Recommended literature: Fernow R.: Introduction to experimental particle physics, Cambridge, 1986. Gruppen C.: Particle detectors, Cambridge, 1996 Kleinknecht K.: Detectors for particle radiation, Cambridge, 1986. Number of ECTS credits: 2	
Recommended semester/trimester of the course: 2.	
Course level: I., II.	
Prerequisites:	
Conditions for course completion: written test and thesis exam	
Learning outcomes: Basic facts in the history of physics.	
Brief outline of the course: Evolution of knowledge before Galileo. Evolution of physics within the mechanical picture of the world. Evolution and limits of classical physics, phase of breakthrough in physics. Origin and evolution of the theory of relativity. Quantum physics and prospects of further evolution of physics and their application. Contemporary state of physical research and its application in technology, natural sciences and philosophy. Position of physics in our society.

Number of ECTS credits: 4					
Recommended semester/trimester of the course: 1.					
Course level: II.					
Prerequisites:					
Conditions for course completion: written tests and thesis exam					
Learning outcomes: Students will acquire basic knowlwdges on interactions of ionizing radiation in the matter and principles of acceleration and detection of elementary particles.					
Brief outline of the course: Accelerators of charged particles - linear and circular, colliding beams. Particle passage through the matter. Energy loss of charged particles. Multiple scattering. Interactions of electrons and gamma radiation with matter. Transition radiation. Particle detection. Gaseous ionization detectors. Scintillation detectors. Cherenkov detectors. Semiconductor detectors. Spectrometry of charged particles. Tracking detectors.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ ZDC/14	Course name: Introduction to particle detection by calorimetric methods
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 4	
Recommended semester/trimester of the course: 2.	
Course level: II.	
Prerequisites:	
Conditions for course completion:	
Learning outcomes: Special lectures as introduction to particle calorimetry.	
Brief outline of the course: PASSAGE OF PARTICLES THROUGH MATTER Electronic energy loss by heavy particles, Moments and cross sections, Maximum energy transfer in a single collision Stopping power at intermediate energies, Mean excitation energy, Density effect, Energy loss at low energies Energetic knock-on electrons (δ rays) , Restricted energy loss rates for relativistic ionizing particles Fluctuations in energy loss, Energy loss in mixtures and compounds, Ionization yields Multiple scattering through small angles, Photon and electron interactions in matter Collision energy losses by e^\pm , Radiation length, Bremsstrahlung energy loss by e^\pm Critical energy, Energy loss by photons, Bremsstrahlung and pair production at very high energies Photonuclear and electronuclear interactions at still higher energies , Muon energy loss at high energy Cherenkov and transition radiation Optical Cherenkov radiation Coherent Cherenkov radiation CALORIMETERS Principles of Calorimetry Electromagnetic and Hadronic Showers Shower Profiles and Containment Electromagnetic calorimeters Hadronic calorimeters Free electron drift velocities in liquid ionization chamber Types of Calorimeters: Compensating and non-compensating Total Absorption, Sampling, homogeneous	

Scintillation, Ionization, Cherenkov
 Signal Detection
 Shower shapes in hadron calorimeters
 Fluctuations in hadronic energy measurements
 Position resolution in the calorimeters
 Shower maximum detectors
 Signal read-out, processing, calibration of readout electronics. Physics calibration of electromagnetic and hadron calorimeters, jet reconstruction, determination of missing energy and that of the jet energy scale.(Getting from calorimetry to physics results)
 Energy and position resolution in calorimetry.

Brief outline of the course: The basic concepts of clinical dosimetry and its radiotherapy applications. The sources of ionising radiation. The dose measurement methods. New trends in clinical dosimetry. PC supported topometry and dosimetry of beams "in phantoms" and "in vivo" dosimetry. 3D-figures (based on tomograph slices) on simulation methods and it's using on radiotherapy.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: KPPaPZ/PPZMg/12	Course name: Psychology and Health Psychology (Master's Study)
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 2 Per study period: 14 / 28 Course method: present	
Number of ECTS credits: 4	
Recommended semester/trimester of the course:	
Course level: II.	
Prerequisites:	
Conditions for course completion: a) Active work during the whole semester (according to the ongoing instructions of the lecturer and instructors); continuous control of study results at seminars during the teaching part of the semester in the range of maximum 5 points. Preparation, presentation and discussion on a selected topic - max. 15 points. A maximum of 2 absences are allowed. b) Written examination of the topics of lectures in the 9th week of the semester at the time and place of the lecture. The written examination will consist of 10 questions of a factual nature (1 question / 3 points) with a maximum of 30 points. Conditions for admission to the exam: completion of seminars and obtaining at least 25 points. c) Exam: written form (50 points / 10 questions of factual-evaluation character of 5 points each) You need to get at least half of the 50 points. Rating: 65 and less FX; 66 - 72 E; 73 - 79 D; 80 - 86 C; 87 - 93 B; 94 - 100 A. The final evaluation reflects the results obtained during the semester and in the exam: A more detailed explanation of the assignment and the work schedule of students will be the subject of an agreement for the 1st exercise of the semester. Any modifications to the implementation of the course in connection with the current order of the Rector are listed in the electronic board of the course.	
Learning outcomes: Students will be able to orient themselves in the basic concepts and theories of health psychology, which will be given an interesting and engaging explanation, accompanied by many examples from life. They will gain orientation in current topics, which are the content of health psychology or they are closely related to the issues not only of this discipline, but also of other psychological disciplines such as educational psychology, personality psychology and the like. Within the course, students are allowed to communicate freely with the teacher and discuss the topics with other classmates.	

Students can practically apply the knowledge from the subject especially in the field of prevention of burnout syndrome and support of mental health in the work of a teacher.

Brief outline of the course:

- 1 Introduction to health psychology
- 2 Psychoimmunology
- 3 Personality factors and health
- 4 Social support as a protective factor in relation to health
- 5 Subjective well-being
- 6 Stress and stressful situations and ways to manage them
- 7 Burnout syndrome
- 8 Health-promoting behavior, mental hygiene
- 9 Health risk behavior
- 10 School as an important factor of health

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice					
Faculty: Faculty of Science					
Course ID: ÚFV/ KTP1a/03		Course name: Quantum Field Theory I			
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 3 / 1 Per study period: 42 / 14 Course method: present					
Number of ECTS credits: 6					
Recommended semester/trimester of the course: 1.					
Course level: II.					
Prerequisites:					
Conditions for course completion: homeworks; their presentation and common analysis of problem under consideration, exam					
Learning outcomes: To offer basic knowledges about modern trends and theoretical methods in description of microword and phenomena in physical systems with infinite degrees of freedom.					
Brief outline of the course: Conception of relativistic quantum field. Particles as quantum fluctuations of this field. Lagrange formalism. Symmetries and related conservation laws for currents. Euler-Lagrange equations. Basic fields - scalar, spinor, electromagnetic and vector. Equations for free classical fields - Klein-Gordon and Dirac equations, Maxwell equations. Lagrangeans and Hamiltonians for these fields. Quantization of free fields. Basic commutating and anticommutating relations for free quantum fields.

Course ID: ÚTVŠ/ ÚTVŠ/CM/13	Course name: Seaside Aerobic Exercise
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: Per study period: 36s Course method: combined, present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course:	
Course level: I., II.	
Prerequisites:	
Conditions for course completion: Conditions for course completion: Attendance	
Learning outcomes: Learning outcomes: Students will be provided an overview of possibilities how to spend leisure time in seaside conditions actively and their skills in work and communication with clients will be improved. Students will acquire practical experience in organising the cultural and art-oriented events, with the aim to improve the stay and to create positive experiences for visitors.	
Brief outline of the course: Brief outline of the course: 1. Basics of seaside aerobics 2. Morning exercises 3. Pilates and its application in seaside conditions 4. Exercises for the spine 5. Yoga basics 6. Sport as a part of leisure time 7. Application of projects of productive spending of leisure time for different age and social groups (children, young people, elderly) 8. Application of seaside cultural and art-oriented activities in leisure time

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice					
Faculty: Faculty of Science					
Course ID: ÚFV/ SPJ1/99		Course name: Special Practice from Nuclear Physics			
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: 3 Per study period: 42 Course method: present					
Number of ECTS credits: 3					
Recommended semester/trimester of the course: 2.					
Course level: II.					
Prerequisites:					
Conditions for course completion: written tests, measurements of experimental tasks, written reports of tasks					
Learning outcomes: Practice in nuclear physics – quantitative and qualitative analysis, selected detector methods and tasks.					
Brief outline of the course: Introduction to practice. Quantitative and qualitative analysis. Gamma source identification using ethalon. Activity determination of gamma source. Identification of unknown beta source from their maximal energy. Beta - spectroscopy. Determination of short lived radioisotope half-lives. Semiconductor detectors. Fine structure of the alpha spectrum of Am-241. Franck-Hertz experiment with Hg tube. Virtual laboratory of nuclear physics.					
Recommended literature: 1. J.Vrláková, S.Vokál: Základné fyzikálne praktikum, skriptá PF UPJŠ, Košice, 2012, dostupné na : http://www.upjs.sk/public/media/5596/Zakladne-fyzikalne-praktikum-III.pdf 2. W.R.Leo: Techniques for Nuclear and Particles Physics Experiments, Springer-Verlag, 1994

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice					
Faculty: Faculty of Science					
Course ID: ÚFV/ TRS/03		Course name: Special Theory of Relativity			
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present					
Number of ECTS credits: 3					
Recommended semester/trimester of the course: 1.					
Course level: I., II.					
Prerequisites: ÚFV/TEP1/03					
Conditions for course completion: Final examination					
Learning outcomes: To acquaint students with principles of a special theory of relativity.					
Brief outline of the course: Galilean transformation and Galilean principle of relativity. Ether's hypothesis. Michelson experiment. Einstein's principles of the special theory of relativity. Lorentz transformation and its physical consequences. Interval and light cone. Proper time. Minkowski's space-time. Mathematical apparatus of special relativity. Relativistic electrodynamics. Relativistic mechanics.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚTVŠ/ TVa/11	Course name: Sports Activities I.
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: combined, present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 1.	
Course level: I., I.II., II.	
Prerequisites:	
Conditions for course completion: Conditions for course completion: Min. 80% of active participation in classes.	
Learning outcomes: Learning outcomes: Increasing physical condition and performance within individual sports. Strengthening the relationship of students to the selected sports activity and its continual improvement.	
Brief outline of the course: Brief outline of the course: Within the optional subject, the Institute of Physical Education and Sports of Pavol Jozef Šafárik University provides for students the following sports activities: aerobics, basketball, badminton, floorball, yoga, pilates, swimming, body-building, indoor football, self-defence and karate, table tennis, sports for unfit persons, streetball, tennis, and volleyball. In the first two semesters of the first level of education students will master basic characteristics and particularities of individual sports, motor skills, game activities, they will improve level of their physical condition, coordination abilities, physical performance, and motor performance fitness. Last but not least, the important role of sports activities is to eliminate swimming illiteracy and by means of a special program of medical physical education to influence and mitigate unfitnes. In addition to these sports, the Institute offers for those who are interested winter and summer physical education trainings with an attractive program and organises various competitions, either at the premises of the faculty or University or competitions with national or international participation.

Course ID: ÚTVŠ/ KP/12	Course name: Survival Course
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: Per study period: 36s Course method: combined, present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course:	
Course level: I., II.	
Prerequisites:	
Conditions for course completion: Conditions for course completion: Attendance Final assessment: continuous fulfilment of all tasks within the course	
Learning outcomes: Learning outcomes: Students will be familiarized with principles of safe stay and movement in extreme natural conditions as they will obtain theoretical knowledge and practical skills to solve the extraordinary and demanding situations connected with survival and minimization of damage to health. The course develops team work and students will learn how to manage and face the situations that require overcoming of obstacles.	
Brief outline of the course: Brief outline of the course: Lectures: 1. Principles of behaviour and safety for movement and stay in unknown mountains 2. Preparation and leadership of tour 3. Objective and subjective danger in mountains 4. Principles of hygiene and prevention of damage to health in extreme conditions Exercises: 1. Movement in terrain, orientation and navigation in terrain (compasses, GPS) 2. Preparation of improvised overnight stay 3. Water treatment and food preparation.

University: P. J. Šafárik University in Košice					
Faculty: Faculty of Science					
Course ID: ÚFV/ VOM/09		Course name: The Universe at Microscopic Level			
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present					
Number of ECTS credits: 3					
Recommended semester/trimester of the course: 3.					
Course level: II.					
Prerequisites:					
Conditions for course completion:					
Learning outcomes: To provide the students with the recent knowledge of the structure of the Universe at the elementary particle level.					
Brief outline of the course: The lectures provide an insight into the microstructure of the Universe - starting with early cosmic phases like quark-gluon plasma, baryogenesis and first nuclei creation and continue with the structure of nowadays Universe: main sequence stars, white dwarfs, neutron stars, black holes, interstellar and inter galactic space, dark matter and dark energy and cosmic rays.					
Recommended literature: 1. D. Griffiths: Introduction to Elementary Particles, Wiley-VCH, Weinheim, 2004 2. D. Perkins: Particle Astrophysics, Oxford University Press, Oxford, 2003 3. D. Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present					
Number of ECTS credits: 3					
Recommended semester/trimester of the course: 1.					
Course level: II.					
Prerequisites:					
Conditions for course completion:					
Learning outcomes: The goal of the subject is to introduce the students to the physical matters of the high (over 10^{15} eV) and ultra high (over $4 \cdot 10^{19}$ eV) cosmic rays. The lectures will concern the history of their observation, the principal of measurement, actual and future experiments, especially JEM-EUSO experiment (the first space-based experiment, which will observe from the International Space Station). The final lectures will review the principles of their propagation and acceleration in galactic and intergalactic space and discuss possible sources of origin.
