**Recommended semester/trimester of the course:** 1.

**Course level:** I.II.

**Prerequisites:**

**Conditions for course completion:**

active presence in all practical lessons

each test assessment: minimum of 60%

**Learning outcomes:**

To introduce the basic concepts of cell biology and molecular biology, including cell structure, biomacromolecules, cell cycle, cell reproduction, gene expression and cell communications. To give students a thorough grounding in the theoretical and practical foundations of molecular biology and cytology. Students have acquired an understanding of the major concepts in cell and molecular biology and have obtained basic information related to cytogenetics in clinical practice.

**Brief outline of the course:**

Biomacromolecules – the fundamental components of biological macromolecules, common characteristics, the structure and function of saccharides, lipids, proteins and nucleic acids. Cell structure – prokaryotic and eukaryotic cells, cell organelles, their structure and function. General characteristic of biomembranes, molecular structure of biomembranes; movement of molecules through the membrane. The structural organization of genome - organization of DNA in genomes, the basic principles of human cytogenetics. Replication of DNA. Cell cycle – phases, control of cell cycle, mitosis, meiosis, spermatogenesis, oogenesis. Cell signalling. Gene expression – gene structure and function, transcription, post-transcriptional RNA processing, translation, synthesis of proteins, posttranslational modifications, regulation of gene expression. The basic principles of epigenetics. Cell differentiation, cell ageing and cell death. Genomics and medicine.

<b>Prerequisites:</b> ULBL/BL-V1/09	
<b>Conditions for course completion:</b> All practical lessons (100%) are obligatory for all students. Assessment of the student's learning achievements is carried out as a combination of continuous monitoring of the study during the teaching part of the semester (40%) with the final examination for the period of the semester concerned (60%). Prerequisite for the final examination (to register for the final examination) is the acquirement of 20 points minimum from continuous assessment during the semester.	
<b>Learning outcomes:</b> To introduce the basic concepts of general biology and human genetics, including mutations and their role in pathogenesis in human diseases, Mendelian genetics, quantitative and population genetics. To give students a thorough grounding in the theoretical and practical foundations of basic genetics. Students have acquired an understanding of the major concepts in human and molecular genetics and have obtained basic information related to genetic and molecular biology methods in clinical practice.	
<b>Brief outline of the course:</b> Mutations I. - classification of mutations, mechanisms of mutagenesis, gene (point) mutations, structural and numerical chromosome mutations. Mendelian genetics - historical overview, general characteristics, Mendel's laws of inheritance. Quantitative genetics - polygenic inheritance, heritability, multifactorial diseases. Gene linkage. Heredity and sex. Genetics in pathogenesis of human diseases. Inheritance of blood group systems I. - ABO, Rh, MNss, Lewis, .... HLA system. Population genetics - Hardy-Weinberg law, population equilibrium, panmixis, inbreeding, genetic drift, eugenics, eugenics. Genealogy and genetic counselling. Genetics of cancer. Molecular biology methods in human genetics and clinical practice. Ethical issues in human genetics.

**Learning outcomes:**

The student masters selected chapters from organic chemistry (eg carboxylic acids, heterocycles) and knows the chemistry of carbohydrates, lipids, amino acids, nucleic acids and proteins, which are necessary for understanding the biochemical processes taking place in the body. Knowledge of the structure of bioorganic molecules, their properties and reactions forms a good basis for subsequent study of medical biochemistry.

<b>Learning outcomes:</b> This subject should provide an understanding of the basic principles that underlie research design, data analysis and interpretation of results and enable the students to carry out a wide range of statistical analyses.	
<b>Brief outline of the course:</b> Basic notion. General sequence of steps in a research project. The design of experiment. Descriptive statistics - mean, standard deviation, variance, standard error of the mean, quartils, confidence intervals. The distribution of observations. Theoretical models of distribution probability. Data protection in information systems. Estimation and hypothesis testing. Data collection, data entry, data checking, data cleaning, data analysis. The two-sample test for equal means, paired and not-paired. Homogeneity of variance in the two samples means test. Analysis of variance one way, parametric. Non-parametric tests. Solution of tasks with using commercialy software. Regression and correlation. Relation between two continuous variables. Simple linear regression and correlation. Correlation coefficient. Point and interval estimates for parameters of line. Testing hypothesis of probability. Contingency tables. Uncertainty models and their applications in medicine. Solution of typical tasks.

<b>Learning outcomes:</b> Laboratory diagnostics is an everyday part of the practice of both general practitioners and specialists. In addition to the basic approaches in the diagnosis, treatment and prevention of diseases, there are also laboratory examinations of body fluids, the analysis of which the graduate of the course should be able to handle. In recent years, many new analytes and approaches have emerged in the field of laboratory diagnostic procedures, not only in the field of molecular biological or proteomic techniques, with which students will be acquainted. The graduate knows the current laboratory methods and their use in clinical diagnostics at the theoretical and practical level, including changes and adjustments to recommended procedures, reference intervals and methods used.	
<b>Brief outline of the course:</b> Analytical methods (eg spectral, electrochemical, chromatographic, immunochemical, enzyme analysis, biosensors). Choice of analytical method (eg based on biological variability, clinical success). Laboratory technology (eg automation, laboratory information system). Therapeutic monitoring of drug levels, basics of toxicology, basic methods of molecular biology.
