Learning outcomes: Broadening of the ba	sic knowledge of metabolic processes for homeostasis maintenance in animal

Broadening of the basic know and human organism

Brief outline of the course:

Carbohydrates – structure, biological significance of mono-, di-, polysaccharides and its derivatives, pathways of carbohydrate synthesis and degradation, glycaemia regulation, clinical aspects of carbohydrate metabolism. Lipids – categories, metabolism, lipogenesis, lipolysis, the metabolic roles of the liver and adipose tissue. Ketogenesis. Regulation of carbohydrate and lipid metabolism. Plasma lipoprotein metabolism, hyper- and hypolipoproteinemias. Cholesterol metabolism, biochemical and clinical aspects of atherogenesis and atherosclerosis. Arachidonic acid – biological significance, formation and functions of eicosanoids, clinical correlations. Reactive oxygen and nitrogen species, oxidative metabolism, antioxidative systems. Metabolic pathways of protein degradation and amino acid transformation, special products of amino acid metabolism. Nitrogen metabolism, urea biosynthesis. Metabolism of solutes. Mechanisms of metabolic processes regulation.

Faculty: Faculty of Science Course ID: ÚBEV/ EFYZ/04 Course name: Environmental physiology Course type, scope and the method: Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: Per study period: 15s Per week: Per study period: 15s Course method: present Number of ECTS credits: 4 Recommended semester/trimester of the course: Course level: III. Prerequisities: Conditions for course completion: oral exam Oral exam Learning outcomes: The aim of this subject is to explain the influence of environmental factors and mechanisms of adaptations in animals and humans. Brief outline of the course: Definition and classification of adaptations. Energy homeostasis maintenance, mechanisms of food intake rgulation. Energy deficit, factors limitating survival in fasting. Increased energy intake and its impact on metabolic and endocrinological profile. Tolerance of extreme temperatures, limits of survival. Survival strategies in hypobaric and hyperbaric environment. Hypergravity and microgravity impact on living organisms. Electromagnetic fields. Biotransformation and the impact of environmental xenobioties on living organisms. Recommended literature: Piantadosi C.A.: The Biology of Human Survival. Oxford University Press, 2003 Asheroft F.: Life at the Extremes. University of California Press, 2000 Kamler K.: Surviving the Extremes. Penguin Books, 2004 Course language: Notes: Course language: Notes:
