COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚGE/SCIP/19	Course name: How to easily write an effective scientific paper
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 1.	
Course level: II., III.	
Prerequisites:	
Conditions for course completion: Lectures will cover course material in a general way, and will provide numerous suggestions for further reading and student self-learning, in particular via pointers to the primary literature. Students will be encouraged to develop practicing approaches for their own publishing needs. This self-learning approach will be further developed as students chose a “current debate” in research publication issues, design and build a presentation on their own publication scheme project that will be delivered to the class in the form of a standard presentation (practical session; 100%).	
Learning outcomes: Effective scientific publishing has never been so important – high levels of scrutiny both in editorial, peer review, and in terms of public spending mean that it's more-and-more critical to think about how, why, and where you are publishing your work. Recent reports suggest over 4 million scientific papers are published each year and to be able to stand out from the crowd and show real impact is becoming ever more crucial. In this short training course, we will help you to achieve your potential in academic publishing, guide you through your publishing journey, and help get your work published in high impact journals. This course provides essential tips and tricks to enable you to achieve your writing aspirations by publishing your research in high impact journals. Although this presentation emphasises ECRs, it contains information useful to all interested in writing for publication. What's covered? 1. How to sell your work to editors, reviewers, and readers – your message; 2. Tips and tricks for things to put into your paper (and things not too); 3. A clear and easy-to-apply roadmap for writing an effective paper; 4. Gaining confidence in the publishing process; “... to publish a paper more easily”.

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ NGM/15	Course name: Nontraditional geostatistical methods
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 1 Per study period: 14 Course method: present	
Number of ECTS credits: 5	
Recommended semester/trimester of the course: 3.	
Course level: III.	
Prerequisites:	
Conditions for course completion:	
Learning outcomes: To acquaint students with interdisciplinary approaches to solving of geostatistical problems, based on models from statistical physics.	
Brief outline of the course: Geostatistical problems solved by innovative approach, an alternative to conventional geostatistical methods, based on models from statistical physics. Getting familiar with the basic concepts of statistical physics and their application to the physical lattice spin models. Geostatistical data modeled as correlated spatial random fields defined through local interactions - an analogy with statistical-physical spin models. Demonstrating the effectiveness and universality of defined models in the processing of bulky, for example, satellite or radar datasets.	
Recommended literature: PATHRIA, R.K., BEALE P.D. 2007: Statistical Mechanics. Elsevier. MECKE, K.R. (Ed.), STOYAN D. (Ed.) 2000: Statistical Physics and Spatial Statistics. Springer. LANDAU, D.P., BINDER. K 2009: A guide to Monte Carlo simulations in statistical physics. Cambridge University Press. ŽUKOVIČ, M., HRISTOPULOS, D.T. 2009: Classification of missing values in spatial data using spin models. Physical Review E 80 (1) 011116.
