COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ POCF/13	Course name: Computational Physics
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 4 Per study period: 56 Course method: present	
Number of ECTS credits: 8	
Recommended semester/trimester of the course: 2.	
Course level: III.	
Prerequisites:	
Conditions for course completion: Examination	
Learning outcomes: To acquaint students with modern methods of computational physics and their application to different physical systems.	
Brief outline of the course: Brief outline of the course: 1. Modern Monte Carlo methods targeted for problematic complex systems with multimodal energy surfaces. Multicanonical methods. Parallel tempering (replica exchange) method. Calculation of density of states and free energy by using Wang-Landau method. 2. Molecular Dynamics. Hybrid Monte Carlo method and spin dynamics. Langevin equations. Cellular automata of lattice gas. Quantum Monte Carlo simulations of lattice systems based on Suzuki-Trotter relation. Ising model in transversal field. Anisotropic Heisenberg chain. Monte Carlo Renormalization Group (MCRG) methods. Mao and Swendsen method. Problems of dynamics. 3. Other models and applications. Fitting data with linear models. Pattern recognition. Recurrent neural networks and time series prediction. Hebbian learning. Principal component analysis. Stochastic signal processing. Simulations of neural networks. Socio-physical models motivated by spin models. Galam models. Voter model in hierarchical systems. Model of group decision making. The opinion dynamics. Sznajd model and its applications.

Number of ECTS credits: 4	
Recommended semester/trimester of the course: 2.	
Course level: III.	
Prerequisites:	
Conditions for course completion:	
Learning outcomes: Knowledge of the basic principles of the radiation detection in the high energy physics.	
Brief outline of the course: 1. Passage of radiation through matter. 2. Gaseous detectors: principles of operation, ionization chamber, proportional chamber, spark chamber, streamer chamber, MWPC, drift chamber, TPC. 3. Scintillation detectors: Geiger and Marsden experiments, scintillation detectors, photomultipliers. 4. Calorimeters: calorimetry in the high energy physics, electromagnetic calorimeters, Rossi-Heitler model of the electromagnetic shower, electromagnetic showers, practical realization of electromagnetic calorimeters, energetic resolution of electromagnetic calorimeters. 5. Hadron calorimeters: hadron showers, electromagnetic and hadronic shower components, calorimeter response, compensation, energy resolution. 6. Cherenkov radiation detectors: Cherenkov radiation, differential Ch. detectors, RICH. 7. Transition radiation detectors. 8. Semiconductor detectors: conduction, semiconductors, P-N junction, microstrip detectors, pixel detectors, drift detectors. 9. Time of flight method. 10. Muon detectors: multiple scattering, Branson plane. 11. Photoemulsion detectors. 12. Experiments at large accelerators. ALICE experiment at LHC at CERN.

Course type, scope and the method: Course type: Recommended course-load (hours): Per week: Per study period: Course method: present	
Number of ECTS credits: 20	
Recommended semester/trimester of the course:	
Course level: III.	
Prerequisites:	
Conditions for course completion: Obtaining required number of credits as given by the study plan.	
Learning outcomes: Evaluation of competences of the student according to his/her scientific profile.	
Brief outline of the course: Presentation of the results in the thesis for disertation exam, responding to referee's comments, answering questions of exam committee. Two questions are selected subsequently from one compulsory and one optional subject, respectively. The subjects are selected by guarantee of the program according to the study plan and scientific profile of the student. The third question addresses the current state of work on dissertation thesis.

Number of ECTS credits: 3	
Recommended semester/trimester of the course: 2.	
Course level: III.	
Prerequisites:	
Conditions for course completion: Distance mode of instruction. Online consultations. Test, oral exam in accordance with the exam requirements (https://www.upjs.sk/filozoficka-fakulta/cjp/doktorandi-upjs/)	
Learning outcomes: Development of students' language skills, improvement of students' linguistic competencies (selected aspects of English pronunciation, vocabulary and syntax), development of students' pragmatic competence (selected aspects of functional grammar) with focus on English for academic and specific purposes. B2/C1 level of language competence (according to CEFR.)	
Brief outline of the course: Specific aspects of academic and professional English with focus on vocabulary development (noun and verb collocations, phrasal verbs, prepositional phrases, word-formation, formal/informal language, etc.), selected aspects of English grammar (prepositions, grammar tenses, passive voice, etc.), selected functional grammar (expressing opinion, cause/effect, arguments, examples, etc.). Academic communication. Cross-language interference.

Course ID: ÚFV/ESH/09	Course name: Extremal States of Matter
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 4	
Recommended semester/trimester of the course: 2.	
Course level: III.	
Prerequisites:	
Conditions for course completion:	
Learning outcomes: The main goal of lectures is introduction to matter extremal states topic.	
Brief outline of the course: Lectures are introduction to extremal state of matter. Deals with wide spectrum of effects beginning with electromagnetic plasma, following with phase states of matter in very hot/dense conditions and finish with a high speculative forms of matters. These can be responsible for accelerated expansion in very early state of space (inflation) or for his actual acceleration (dark energy). Lectures are also short introduction to modern cosmology, with relations to nuclear and particle physics.	
Recommended literature: 1. Andrew Liddle, An introduction to modern cosmology, Chichester, UK: Wiley (1998) 129 str. 2. Joseph Silk, The Big Bang 3. COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ UFRJZ/09	Course name: Introduction to Physics of Relativistic Nuclear Collisions
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 5	
Recommended semester/trimester of the course: 2.	
Course level: III.	
Prerequisites:	
Conditions for course completion: written test and thesis, exam	
Learning outcomes: Acquisition of basic knowledges from the high-energy heavy ion physics.	
Brief outline of the course: Heavy ion collisions from intermediate to ultra-relativistic energies are covered in this lecture. After the introductory part, including kinematics, cross sections, geometry and centrality of nuclear collisions, the fragmentation processes, multiplicities, longitudinal and transverse momentum spectra of secondary particles are discussed. The next part covers a wide range of subjects from strangeness production and heavy flavors through creation of antinuclei and hypernuclei in nuclear collisions to hadron femtoscopy. Some selected phenomena connected with possible production of the dense and hot nuclear matter (quark-gluon plasma) are introduced. Finally, collective flows, charmonium suppression, di-lepton mass spectra, direct photons and production of particles with high transverse momenta are presented. 1. Introduction 2. Basic overview of the phenomenology of heavy ion collisions 3. Introduction to relativistic kinetic theory 4. Relativistic Boltzmann transport equation 5. Equation of state 6. Relativistic fluid dynamics 7. Simple models 8. Measurable quantities 9. Scaling in hydrodynamic model 10. Direct solution of the kinetic equation 11. Search for quark-gluon plasma 12. Relation to astrophysics

Recommended semester/trimester of the course: 1.	
Course level: III.	
Prerequisites:	
Conditions for course completion:	
Learning outcomes: To acquaint with basic information about the theory of strong interactions - quantum chromodynamics	
Brief outline of the course: 1. Lectures are oriented on explanation of the strong interaction on the base of first principles, their description and analysis of both elastic and deep-inelastic scattering of hadrons and leptons. 2. Determination of the color is introduced, which is basic quantum number for strongly interacting particles and fundamental physical principle on which quantum chromodynamics (QCD) is constructed. 3. Basic features of this theory are explained and it is demonstrated its application for calculation cross sections of typical interacting processes in presence of mesons and baryons.

Prerequisites:	
Conditions for course completion:	
Learning outcomes: To review biophysical and statistical models for evaluation of biological equivalent dose (BED) of ionizing radiation based on the type of dosing and timing of the therapy as well as on the type of biological object (tumor, healthy tissue. To describe the linear-quadratic model, Lyman model for predictive determination of complications (NTCP) and the Poisson model for the determination of tumor control probability (TCP).	
Brief outline of the course: Classification of tissue damage by ionizing radiation – outputs of experimental and clinical radiobiology. Stochastic and deterministic effects of ionizing radiation. Immediate and retarded effects of ionizing radiation. Radiation damage of the malignant and normal tissue – therapeutic ratio. Tumor reparation, repopulation, redistribution, and reoxygenization. Linear-quadratic model and the biological equivalent dose. Volume factor in the radiotherapy – dose-volume histograms (DVH). Lymanov-Kutcher-Burman model of complication probability NTCP. Recommendations of the QUANTEC project for the appreciation of the retarded effects prediction. The Poisson model for the determination of tumor control probability - TCP. BioGray – an SW tool for the TCP/NTCP predictive modeling. Optimization of the radiation treatment applying 3D CT/MR, DVH and fractionation.

Learning outcomes: The aim is a short renewal of master course and application of quantum field theory in physics of elementary particles and in macroscopic systems with infinite number of degrees of freedom.	
Brief outline of the course: 1. Lectures cover wide sphere of problems of high energy physics and statistical physics. Specific applications are carried out for basic theories of elementary particles – Quantum electrodynamics (QED), Quantum Chromodynamics (QCD), standard model (SM) and for some models of unified theory of elementary particles. 2. Application of quantum field theory to the classical physics is concentrated on explanation of connection between the quantum field and statistical fluctuations of classical fields, generating functional of Green functions of quantum fields and statistical sum, on the Feynman graphs and perturbative technique in statistical physics

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/SJSF3a/04	Course name: Seminar from Nuclear and Subnuclear Physics
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 3	
Recommended semester/trimester of the course: 5.	
Course level: III.	
Prerequisites:	
Conditions for course completion:	
Learning outcomes: To bring the topical problems, methodics and tools of high energy physics to the students.	
Brief outline of the course: Department seminar - selected topical problems of the nuclear and subnuclear physics.	
Recommended literature:	
Course language:	
Notes:	
Course assessment Total number of assessed students: 14	
abs	n
100.0	0.0
Provides: doc. RNDr. Janka Vrláková, PhD.

Faculty: Faculty of Science	
Course ID: ÚFV/MSF/04	Course name: Simulation of Experiments and Processes in Subatomic Physics
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 5	
Recommended semester/trimester of the course: 1.	
Course level: III.	
Prerequisites:	
Conditions for course completion:	
Learning outcomes: To introduce the students into the simulation of experiments and to the available programming tools.	
Brief outline of the course: The role of simulation in physics. Basics of probability theory and mathematical statistics. Frequently used distributions in physics. Basics of the Monte Carlo methods. Random number generators and their realisations. Programming tools used in high energy physics experiments simulation (e.g. GEANT, PYTHIA).	
Recommended literature: .Hudson: Lectures on Elementary statistics and probability, CERN 63-29, 1963 D. Hudson: Maximum likelihood and Least square theory, CERN 64-18, 1964 Manuály modelovacích programov A.G. University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ SLNZ/09	Course name: Study of Lepton-Nucleon Collisions
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 5	
Recommended semester/trimester of the course: 2.	
Course level: III.	
Prerequisites:	
Conditions for course completion:	
Learning outcomes: To review the results of lepton-nucleon collision studies.	
Brief outline of the course: The lectures are concentrated on the analysis of relativistic leptons (electron, positron, and neutrinos) collisions with nucleons (protons and neutrons) and based on these results to study the internal structure of hadrons, mainly that of the proton. Determination of the proton (neutron, pion) structure functions and the extraction of parton structure functions in the proton. To study the photon structure function and analysis of diffractive processes in lepton-nucleon collisions.	
Recommended literature: 1. Dušan Bruncko: Štúdium leptónovo-nukleónových zrážok (Study of lepton-nucleon collisions) http://home.saske.sk/~bruncko/img/paper/skripta.pdf http://home.saske.sk/~bruncko/img/paper/skripta.ps
