COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚCHV/ NMR1/00	**Course name:** 1D & 2D NMR Spectroscopy

Course type, scope and the method:
Course type: Lecture / Practice
Recommended course-load (hours):
Per week: 2 / 3 **Per study period:** 28 / 42
Course method: present

Number of ECTS credits: 6

Recommended semester/trimester of the course:

Course level: II.

Prerequisities:

Conditions for course completion:
Active student´s work at seminars and individual homework, written examinations in 7th and 14th semestral week.
Terminal examination in written form (4 exercises from combined applications of 1D a 2D NMR and other spectral methods) and oral form (3 themes) joining theoretical knowledge with a practical solution of selected NMR problems and exercises.

Learning outcomes:
Students will learn how to analyze structure and properties of organic, inorganic and biomolecular compounds by 1D and 2D proton and carbon NMR spectra, quantitative NMR analysis, and practical applications in various fields of science and technology.

Brief outline of the course:
Theoretical principles of nuclear magnetic resonance (NMR), basic NMR pulse techniques and Fourier transformation, NMR spectrometers, description of NMR by vector models. Parameters of one- (1D) and two-dimensional (2D) NMR spectra, practical application of 1H and 13C NMR spectra and basic correlated 2D spectra for structure and stereochemical arrangement, elucidation of reaction mechanisms, molecular dynamics, physico-chemical properties and quantitative analysis of chemical compounds.

Recommended literature:

Number of ECTS credits: 5	
Recommended semester/trimester of the course:	
Course level: II.	
Prerequisities:	
Conditions for course completion: Individual work on seminars Final assessment - exam: written exam consisting of theory and solving the practical synhetic problems	
Learning outcomes: Objectives of the course: To clarify the role of the organometallic compounds chemistry as one of the perspective interdisciplinary field of organic and inorganic chemistry.	
Brief outline of the course: The goal of this subject is to apprise the students of the main characteristics of organometallic compounds - the types of carbon-metal bonds, the structure, chirality and basic methods of preparation of organometallic compounds. The most important groups of organometallic compounds, including metallocenes, are presented in details herein. Many examples of the utilization of organometallic complexes in addition, elimination and substitution reactions are given including many examples of their applications in asymmetric synthesis and in the synthesis of natural products possesing some biological activity.

Learning outcomes:
Explanation of basic principles in the research and development of chemical drugs, understanding of structure-activity relationships including space structure and chirality and their consequences on chemical and physico-chemical properties influencing biological activity. Gaining knowledge of the present state in the field of selected important groups of drugs, such as antibacterial, antiviral or antitumor drugs.

Brief outline of the course:
Introduction, classification of drugs, factors influencing design and activity of drugs of the third generation, drug chirality, search for new drugs, structure-activity relationships, chemotherapeutics of central, peripheral and vegetative nervous system, antibacterial, antitumor and antiviral compounds, antitussives and expectorants, disinfectants.

University: P. J. Šafárik University in Košice

Faculty: Faculty of Science

Course ID: ÚCHV/ MM1/00	**Course name:** Molecular modeling

Course type, scope and the method:
Course type: Lecture / Practice
Recommended course-load (hours):
Per week: 1 / 3 **Per study period:** 14 / 42
Course method: present

Number of ECTS credits: 4

Recommended semester/trimester of the course:

Course level: II.

Prerequisities:

Conditions for course completion:
Verbal examination and the seminar project

Learning outcomes:
Basic skills and theory necessary for the realisation of the computational experiments in chemistry using specialized software packages. Students will be able to perform theoretical studies of the structure and electronic properties of the smalll and middle-sized molecules and study the thermodynamical and structural aspects of the chemical reactions.

Brief outline of the course:
Building and visualization of chemical structures. Structure optimization and calculation of minimum energy structure. Theoretical studies of reaction mechanisms and chemical reactions. Methods in molecular mechanics and semi-empirical methods. Ab initio and DFT methods. Basic principles and use of molecular dynamics. Conformational analysis.

Recommended literature:

Course method: present

Number of ECTS credits: 5

Recommended semester/trimester of the course:

Course level: II.

Prerequisities:

Conditions for course completion:
Seminar report on the selected subjects of neurochemistry and its oral presentation connected with discussion. Terminal examination by oral form.

Learning outcomes:
Explanation of the fundamental principles of the chemical transmission between nerve cells.

Brief outline of the course:
Neurocellular anatomy, characteristics of the neuron. Cell membrane structures - phospholipid bilayer, membrane proteins. Membrane transport and ion channels. Synaptic transmission and cellular signaling. Neurotransmitters - acetylcholine, catecholamines, serotonin, amino acids (glutamate, aspartate, GABA, glycine). Neuropeptides - neuropeptide functions and regulation. G-proteins, the second-messenger hypothesis (cAMP, IP3, DAG, Ca2+).

Course method: present

Number of ECTS credits: 4

Recommended semester/trimester of the course:

Course level: II.

Prerequisities:

Conditions for course completion:
Work at seminars. Homeworks: Calculations of kinetic and thermodynamic parameters of model reactions.
Terminal examination consists of responding 3 themes and 3 exercises connecting thus the theoretical knowledge with praktical solutions of problems.

Learning outcomes:
Adopting of principles and methodology of the kinetics of organic reactions and their utilization for kinetic measurements of main types of chemical reactions. Learning of measurements and calculations of the basic kinetic and thermodynamic parameters using examples from real chemical experiments and the use of these data for determination of the mechanisms of the organic reactions.

Brief outline of the course:
The importance of kinetics and mechanisms of organic reactions. Rate constants and kinetic equations. Methods used at measuring of the reaction rates. Particular steps of determination of kinetic equations and rate constants. Main stages at solving of kinetic problems. Effects of reaction conditions on the reaction rate. Determination of the kinetic equation and rate constants. Reactions, kinetic equations, and rate constants of the first, pseudo-first, and second order. Reversible reactions. Parallel reactions. Consecutive reactions. Activation energy and entropy. Acido-basic catalysis. Isotopic effects. Influence of the medium on the chemical reactions. Linear free-energy relationships.

Prerequisities:

Conditions for course completion:
Midterm exam.
Presentation of a multistep synthesis.
Final written exam.

Learning outcomes:
The aim is to become familiar with the most important methods for the synthesis of organic compounds, their combination and application in the synthesis of complex molecules.

Brief outline of the course:
Retrosynthetic analysis of organic compounds and synthesis planning. Building of a carbon backbone using organometallic compounds and enolates. Reactions resulting in creation of multiple bonds. Synthesis of cyclic molecules. Synthesis of halogenderivatives, oxygen containing organic molecules, nitrogen derivatives. Protecting groups and special synthetic techniques. Synthesis of complex molecules and natural products.

Conditions for course completion:
Conditions for the continuous assessment during the semester:
Active work (maximum 5 points, 2 absences are allowed).
Preparation, presentation and discussion on a selected topic - max. 15 points.
Written examination (maximum 30 points).
Conditions for admission to the exam: min. 25 points.
Conditions for the final assessment:
Exam: written form (max. 50 points, min. 25 points)
Conditions for successful completion of the course: participation in lessons, fulfillment of assignments and at least 66 points from the overall evaluation.
Detailed information in the electronic bulletin board of the course in AIS2. The teaching of the subject will be realized by a combined method.

Learning outcomes:
The student will understand the basic concepts and theories of health psychology, can explain salutogenic factors as well as the consequences of risk behavior related to health. He is able to apply the knowledge especially in the field of prevention of burnout syndrome and support of mental health in the work of a teacher.

Brief outline of the course:
1 Introduction to health psychology
2 Psychoimmunology
3 Personality factors and health
4 Social support as a protective factor in relation to health
5 Subjective well-being
6 Stress and stressful situations and ways to manage them
7 Burnout syndrome
8 Health-promoting behavior, mental hygiene
9 Health risk behavior
10 School as an important factor of health

Conditions for course completion:
Activity within practice will be evaluated. Two written tests will be realized in 7-th and 14-th week, resp. during the term of the course.
The examination will consist of written and verbal test. Continuous evaluation will be also taken into account.

Learning outcomes:
Students will intensify their knowledge in the field of valence-bond based on molecular orbital theory (MO) and self-reliant perform basic quantum chemical calculations (molecular geometry optimization, transition states, vibrational analysis, etc.).

Brief outline of the course:
Development of valence-bond theory. Time-independent Schrodinger equation. Basic approximations in molecular orbital valence-bond theory. Variant methods of calculation in the framework of molecular orbital valence-bond theory. Chemical reactivity. Potential energy hypersurfaces of molecules. Reaction coordinate. Calculation of the absolute and relative equilibrium and rate constants, resp. in gas phase. Solvatation energy calculation.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice

Faculty: Faculty of Science

Course ID: ÚTVŠ/ TVc/11	**Course name:** Sports Activities III.

Course type, scope and the method:
Course type: Practice
Recommended course-load (hours):
Per week: 2 **Per study period:** 28
Course method: combined, present

Number of ECTS credits: 2

Recommended semester/trimester of the course: 3.

Course level: I., I.II., II.

Prerequisities:

Conditions for course completion:
min. 80% of active participation in classes

Learning outcomes:
Sports activities in all their forms prepare university students for their professional and personal life. They have a great impact on physical fitness and performance. Specialization in sports activities enables students to strengthen their relationship towards the selected sport in which they also improve.

Brief outline of the course:
Within the optional subject, the Institute of Physical Education and Sports of Pavol Jozef Šafárik University provides for students the following sports activities: aerobics, aikido, basketball, badminton, body form, bouldering, floorball, yoga, power yoga, pilates, swimming, body-building, indoor football, S-M systems, step aerobics, table tennis, tennis, volleyball and chess.
In the first two semesters of the first level of education students will master basic characteristics and particularities of individual sports, motor skills, game activities, they will improve level of their physical condition, coordination abilities, physical performance, and motor performance fitness. Last but not least, the important role of sports activities is to eliminate swimming illiteracy and by means of a special program of medical physical education to influence and mitigate unfitness.
In addition to these sports, the Institute offers for those who are interested winter and summer physical education trainings with an attractive program and organises various competitions, either at the premises of the faculty or University or competitions with national or international participation.

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚCHV/ STRE/09	**Course name:** Structure and Reactivity in Organic Chemistry

Course type, scope and the method:
Course type: Lecture / Practice
Recommended course-load (hours):
Per week: 2 / 1 **Per study period:** 28 / 14
Course method: present

Number of ECTS credits: 4

Recommended semester/trimester of the course:

Course level: II.

Prerequisities:

Conditions for course completion:
Tests: in 6th week (50 points) and in 12th week (50 points). At least 50% of points required from both. Terminal examination by written form, 100 points (2 x 50 points).

Learning outcomes:
This module aims to give an understanding of the major principles involved in organic chemistry - covering the fundamentals of bonding, structure and stereochemistry, leading to a description of the types of reaction and reactivity of the various structural types.

Brief outline of the course:
1. Bonding: atomic structure - the chemical bond, the periodic table, valence electrons, Lewis structures, conventions for drawing structures, atomic orbital theory, molecular orbital theory; covalent bonding – bonding in hydrocarbons, bonding in compounds containing heteroatoms, bonding in common functional groups, electronic effects, steric effects.
2. Structure: configuration – geometrical isomerism, optical isomerism, representations of stereoisomers, molecules with one stereogenic centre, molecules with more than one stereogenic centre, asymmetric heteroatoms; conformations – representations of conformers.
3. Reactivity: thermodynamics – Gibbs energy, enthalpy, entropy, chemical equilibrium; kinetics – rates of reaction, activation energy; classes of reaction mechanism – polar, radical, pericyclic, ligand coupling mechanisms, selectivity of reactions, solvents in organic chemistry.
4. Intermediates: carbocations, carbanions, radicals, carbenes, benzynes, ketenes.
5. Acidity a basicity: Lowry-Bronsted acid-base theory, organic acidity, organic basicity.
6. Nucleophilic Substitution: the SN1 reaction, the SN2 reaction, factors affecting reactions.
7. Electrophilic addition reactions, the energy profile of the reaction, the addition of HX to alkenes, Markovnikov's rule, the stereochemistry of electrophilic addition reactions, addition X2 to alkenes, hydration, hydroxymerkuration, hydroboration, addition of carbenes, addition of polyenes, nucleophilic addition reactions, nucleophilic addition to carbonyl compounds, addition water, addition of alcohols, addition of carbanions, the addition of organometallic reagents, addition of amines, conjugated additions, radical addition reactions.
8. Elimination reaction, E1, E2, E1cB, dehydration, dehydrohalogenation, dehalogenation, dehydrogenation.

9. The electrophilic aromatic substitution, halogenation, nitration, sulfonation, Friedel-Crafts alkylation, acylation, towards the impact of multiple groups, nucleophilic aromatic substitution, addition-elimination mechanism, benzynic mechanism, radical substitution of aromatics.
10. Nucleophilic substitution of sp2 carbon, tetrahedral mechanism, addition-elimination mechanism, the elimination-addition mechanism, the types of nucleophilic acyl substitution, nucleophilic acyl substitution of carboxylic acids and their derivatives.
11. Radical reactions, radical substitution, the radical addition, homolytic cleavage of σ-bond photochemical cleavage of π-bonds, one electron oxidation or reduction, cykloaromatiztion.
12. Pericyclic reaction types of pericyclic reactions: electrocyclic reactions, cycloaddition, sigmatropic rearrangements, ene reactions, Woodward-Hoffman rules.
7. Addition reactions
8. Elimination reactions
9. Aromatic substitution
10. Addition-elimination reactions
11. Radical reactions
12. Pericyclic reactions
