Course ID: KPPaPZ/ASP/15	Course name: Application of Systematic Approach in School Practice
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 2 Per study period: 14 / 28 Course method: present	
Number of ECTS credits: 4	
Recommended semester/trimester of the course: 2.	
Course level: II.	
Prerequisites:	
Conditions for course completion: The evaluation of the course (continuous and final) and its subsequent completion will be based on clearly and objectively set requirements, which will be set in advance and will not change. The aim of the assessment is to ensure an objective and fair mapping of the student's knowledge while adhering to all ethical and moral standards. There is no tolerance for students' fraudulent behavior, either in the teaching process or in the assessment process. Attendance - completion of 80% of teaching (lectures, seminars). Student assessment is also based on (1) activities during the semester (40 points) and (2) the final exam (60 points) demonstrating theoretical and practical knowledge and skills of systemic therapy. (1) Activities assessed during the semester: short test (max. 20 points) and presentation of the selected topic (max. 20 points). Minimum number of points required to pass the test: 21. (2) The final exam (max. 60 points) includes a test (max. 30 points) and a video presentation of a counseling meeting with the client, where the student will be able to use system procedures and techniques. Final evaluation (sum of all points): At least 91 points are needed for A, at least 81 points for B, at least 71 points for C, at least 61 points for D, at least 51 points for E, for FX = 50 and less.	
Learning outcomes: The purpose of this course is to equip students with a comprehensive, competent and respectful approach to people, especially in the professions of psychotherapy, psychological counseling and coaching. The aim of the course is to ensure that students: (1) they understood the scientific current called the "systems approach" (they were mainly acquainted with the basics of constructivist philosophy, communication theory, cybernetics and the theory of autopoietic systems), (2) had the basics of systems thinking (thinking of people as human and social systems interacting with other environments), (3) mastered the basic techniques of systemic work with the individual (abilities established frameworks for collaboration, established a respectful relationship, mastered supportive and competitive communication, and encouraged the transfer of results to other client situations), and (4) were able to apply all policies and procedures to each other.	

<p>The course is interactive, seminars and exercises alternate, in seminars students create theories and methodologies they learn, using stimulus sheets that give them a basic framework for thinking about concepts and models that offer systematic and systemic approaches. It allows everyone to choose from a wide range of systems theories and methodologies, the spectrum that best suits their personal and educational structure, and thus provides better guarantees for a more effective use of knowledge and skills in practice.</p> <p>The method of teaching the subject will be oriented to the student. Lecturers will be interested in the needs, expectations and opinions of students so as to encourage them to think critically by expressing respect and feedback on their opinions and needs.</p> <p>The content of the curriculum will be based on primary and high-quality sources that will reflect the topicality of the topics so as to ensure the connection of the curriculum with other subjects and also the connection of the curriculum with practice. Students will be expected to take an active approach in lectures and seminars with an emphasis on their independence and responsibility.</p> <p>Graduates of the course will be able to understand the basic ideas of a systemic approach and be able to apply systemic techniques in the context of school.</p>																	
<p>Brief outline of the course:</p> <p>Anchoring the systemic approach of other psychotherapeutic and assistive approaches; Philosophical background of the systemic approach (social constructivism, cybernetics, autopoietic systems); Basic questions and premises of systemic theory (objectivity, subjectivity, reality, causality, relation of language to reality); Systemic understanding of the problem; Attitudes, basic assumptions and goals in working with the client; Systemic questions (circular questions, questions to be solved, Andersen questions); Solution-oriented approach (starting points, goals and techniques)</p>
