COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ ASTF/15	Course name: Astrophysics
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 4 Per study period: 56 Course method: present	
Number of ECTS credits: 8	
Recommended semester/trimester of the course: 1.	
Course level: III.	
Prerequisites:	
Conditions for course completion: To successfully complete the course, the student must demonstrate a sufficient understanding of the formation of spectra in stellar atmospheres and their properties. Knowledge of chemical analysis, determination of stellar radii, temperatures and photospheric pressures, stellar rotation, micro and macroturbulence is required. The condition for obtaining credits is preparation of seminar essay and passing an oral exam, which consists of three theoretical questions within the curriculum presented during the course. The credit evaluation of the course considers the following student workload: direct teaching (2 credits), self-study (3 credits), individual consultations (2 credits) and assessment (1 credit). The minimum threshold for completing the course is to obtain at least 50% of the total score, using the following rating scale: passed (50-100%), failed (0-49%).	
Learning outcomes: After completing lectures, the student will master important concepts of the physics of stellar atmospheres. It will also have sufficient physical knowledge and mathematical apparatus to independently solve a wide range of astronomical problems related to the analysis of stellar spectra, such as performing chemical analysis, determining stellar radii, temperatures and photospheric pressure, rotational velocity and micro and macroturbulence parameters.	
Brief outline of the course: 1. Chemical analysis: Curve of growth. Dependence on the temperature, pressure. Saturation. A reference curve of growth. Derivation of abundances, differential analysis, and synthesis method. The solar chemical composition, stellar abundances, and their evolutionary changes. Chemically peculiar stars. 2. Stellar radii and temperatures: speckle photometry, the interferometers, eclipsing binaries, the bolometric flux method, the surface-brightness method. The effective temperature from absolute flux, the Paschen continuum, colour indices, the Balmer jump, spectral lines of hydrogen and metals. 3. Photospheric pressure: the continuum as a pressure indicator, the spectral lines of hydrogen. The gravity-temperature diagram. The helium abundance. 4. Stellar rotation: the rotation profile, spectroscopic measurements of rotation, Fourier analysis, rotation dwarfs and evolved stars. Rotation and magnetic activity. Rotation of binary stars. Rotational mapping.	

5. Velocity fields in stellar photospheres: Micro-turbulence and macro-turbulence. Line asymmetries. Stellar granulation. Modelling. Stellar wind.	
Recommended literature: 1. Gray, D.F., The observation and analysis of stellar photospheres, Cambridge University Press, Cambridge, 1992; 2. Böhm-Vitense, E., Introduction to stellar astrophysics, Stellar atmospheres, Cambridge University Press, Cambridge, 1997; 3. COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ODZP/14	Course name: Defence of Doctoral Thesis
Course type, scope and the method: Course type: Recommended course-load (hours): Per week: Per study period: Course method: present	
Number of ECTS credits: 30	
Recommended semester/trimester of the course:	
Course level: III.	
Prerequisites:	
Conditions for course completion: The Dissertation thesis is the result of the student's own scientific research. It must not show elements of academic fraud and must meet the criteria of correct research practice defined in the Rector's Decision no. 21/2021, which lays down the rules for assessing plagiarism at Pavel Jozef Šafárik University in Košice and its constituents. Fulfillment of the criteria is verified mainly in the process of supervising and in the process of the thesis defense. Failure to do so is grounds for disciplinary action.	
Learning outcomes: The Dissertation thesis has elements of a scientific work and the student demonstrates extensive mastery of the theory and professional terminology of the field of study, acquisition of knowledge, skills and competences in accordance with the declared profile of the graduate of the field of study, as well as the ability to apply them in an original way in solving selected problems of the field of study. The student demonstrates the ability of independent scientific work in terms of content, formal and ethical aspects. Further details of the Dissertation thesis are determined by Directive no. 1/2011 on the essential prerequisites of final theses and by the Study Rules of Procedure at UPJŠ in Košice for doctoral studies. The doctoral student demonstrated the ability and readiness for independent scientific and creative activity in the field of study of philology in accordance with the expectations of the relevant qualification framework and the profile of the graduate.

Number of ECTS credits: 20	
Recommended semester/trimester of the course:	
Course level: III.	
Prerequisites:	
Conditions for course completion: Obtaining required number of credits as given by the study plan.	
Learning outcomes: Evaluation of competences of the student according to his/her scientific profile.	
Brief outline of the course: Presentation of the results in the thesis for disertation exam, responding to referee's comments, answering questions of exam committee. Two questions are selected subsequently from one compulsory and one optional subject, respectively. The subjects are selected by guarantee of the program according to the study plan and scientific profile of the student. The third question addresses the current state of work on dissertation thesis.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ ASVE/15	Course name: High energy astrophysics
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 4 Per study period: 56 Course method: present	
Number of ECTS credits: 8	
Recommended semester/trimester of the course: 3.	
Course level: III.	
Prerequisites:	
Conditions for course completion: To successfully complete the course, the student must demonstrate sufficient understanding of the basics of high energy astrophysics. Knowledge of astrophysical mechanisms of origin and properties of high-energy radiation in various types of space objects, as well as methods of detection and analysis of X-rays and gamma rays is required. The condition for obtaining credits is preparation of seminar essay and passing an oral exam, which consists of three theoretical questions within the curriculum presented during the course. The credit evaluation of the course considers the following student workload: direct teaching (2 credits), self-study (3 credits), individual consultations (2 credits) and assessment (1 credit). The minimum threshold for completing the course is to obtain at least 50% of the total score, using the following rating scale: passed (50-100%), failed (0-49%).	
Learning outcomes: After completing the lectures, the student will master the basic knowledge of astrophysical mechanisms of origin and properties of high-energy radiation in various types of space objects, as well as methods of detection and analysis of X-rays and gamma rays. It will also have sufficient physical knowledge and mathematical apparatus to enable independent solving of a wide range of astronomical problems related to high energy astrophysics.	
Brief outline of the course: 1. High energy astrophysics: the discovery, properties, and mechanisms for generating of X-rays and gamma rays, observing of high energy photons from cosmic sources. X-ray and gamma ray detectors, location of cosmic X-ray sources, spectroscopy, timing, significant missions. 2. Solar system X-rays: The production of planetary X-rays, Earth and other planets, the Moon, comets. The interstellar medium: absorption of X-ray by interstellar and intergalactic gas, shadows, scattering of X-ray by interstellar dust. 3. Active stellar coronae: The Sun, the dynamo model, coronal emission from binary systems, high-resolution X-ray spectra, X-ray Doppler imaging, Flare stars, young stars. 4. Early-type stars: O stars, stellar winds, X-rays from single stars, colliding winds, Eta Carinae, Superbubbles. 5. Supernova explosions and their remnants: X-ray from supernovae, evolution of supernovae remnants, young shell-like remnants.	

6. Neutron stars and pulsars: The Crab nebula, rotation and spin-down, the glitch, pulsed radiation, structure of neutron stars, cooling, pulsar wind nebulae, anomalous pulsars, soft-gamma repeaters, magnetars.
7. Cataclysmic variable stars (CVs): geometry of accretion in CVs, dwarf nova outbursts, X-rays from dwarf novae, formation and evolution of CVs, magnetic CVs, X-ray spectroscopy of CVs, AM CVn systems, super-soft sources.
8. X-ray binaries: high-mass and low-mass X-ray binaries, black-hole X-ray binaries and their observed properties, soft X-ray transients.
9. Galaxies, active galactic nuclei (AGNs) and clusters of galaxies: X-ray sources in the Milky Way, Local Group, star-burst galaxies, the unified model, and structure of AGNs, central supermassive black holes, jets, out-flowing wings, X-rays from inter cluster medium (ICM), temperature and morphology of ICM, the Sunyaev-Zeldovitch effect.
10. The diffuse X-ray background and Gamma-ray bursts (GRBs): extragalactic source populations and cosmic variance, diffuse galactic emission, discovery, afterglows and precise location of GRBs, present understanding.

Learning outcomes: The aim of the course is to give to the students, oriented to the astrophysics, basic knowldges about unified theory of electro-weak interactions	
Brief outline of the course: 1.From the metodological point of view the lectures are based on explanation of known processes of weak interaction where beta-decay belongs. 2.Genesis of modern electro-weak theory and standard model is given by inductive method starting from definition of V-A currents, choise of appropriate calibration symmetry, corresponding intermediate bosons and Yang_Mils quantum fields and Higgs mechanism. 3.As a result the modern formulation of Glashow- Weinberg-Salam standard model is proposed.

Course type, scope and the method: Course type: Recommended course-load (hours): Per week: Per study period: Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course:	
Course level: III.	
Prerequisites:	
Conditions for course completion: Active participation in the home conference.	
Learning outcomes: By actively participating in the national scientific conference, the PhD student demonstrates a high degree of ability to identify, evaluate, and apply correct scientific methods or research methodology in his scientific field. He demonstrates the ability to reflect on a specific scientific problem by using the latest approaches and applying them critically. Demonstrates competence in using existing theories and concepts in an innovative way, as well as generating new original scientific knowledge and communicating research results to a wider audience using adequate means and through the Slovak language.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ NMAS/15	Course name: Numerical methods of astrophysics
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 4 Per study period: 56 Course method: present	
Number of ECTS credits: 8	
Recommended semester/trimester of the course: 3.	
Course level: III.	
Prerequisites:	
Conditions for course completion: To successfully complete the course, it is necessary for the student to demonstrate a sufficient understanding of various numerical methods used in astrophysics, be able to apply machine learning approaches and simulate some astrophysical processes. Lectures are organized in blocks. In order to obtain an evaluation and thus also credits, the student must create a software project on a given topic and present the achieved results. Credit evaluation of the course takes into account the following student workload: direct teaching (2 credit), self-study (3 credits), individual consultations (2 credit), and exam (1 credit).	
Learning outcomes: After completing the course, the student will have the knowledge that will enable him to independently solve complex numerical problems in astrophysics, such as Monte-Carlo simulations, integration of N-body motion, etc. They will also be able to apply machine learning approaches and methods to different types of astronomical data.	
Brief outline of the course: Monte-Carlo simulations in astrophysics, energy transfer in a star, determination of parameter errors, simulations of light curves of eclipsing binary stars - ELISA module. Simulations of mass transfer and accretion disks. Dynamics of systems with N bodies. Machine-learning and eclipsing binaries	
Recommended literature: 1. Press et. al.: 2002, Numerical Recipes in C.: Cambridge University Press 2. Robert, A. & Cassela, M.: 2005, Monte Carlo Statistical Methods, Springer 3. Raschka, S.: 2016, Python Machine Learning, Packt Publishing 4. COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: KPE/ PgVU/17	Course name: Pedagogy for University Teachers
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: Per study period: 28s Course method: present	
Number of ECTS credits: 5	
Recommended semester/trimester of the course:	
Course level: III.	
Prerequisites:	
Conditions for course completion: 1. Development of a teaching diary—100% 2. Compulsory active participation and attendance in accordance with the Study Regulations.	
Learning outcomes: Students will be able to: Apply didactic principles, methods, forms, and tools in the teaching of a specialised subject. Specify the educational procedures of a university teacher in subject teaching, pedagogical diagnostics, evaluation of learning outcomes, and self-reflection. Present rationalisation and streamlining possibilities in the teaching of specialised subjects. Apply educational competencies of university teachers taking into account the peculiarities of educating university students.	
Brief outline of the course: The personality of a university teacher. Teaching styles. Student in university education. Student learning styles. Possibilities of adapting teaching styles and student learning styles. University teacher–student interaction and communication in the teaching process. Pedagogical competencies of a university teacher. Didactic analysis of the curriculum; teaching materials and textbooks. Forms of university teaching. Methods of university teaching. Verification methods and student assessment. Creation of a didactic test. Designing university teaching process. University teacher self-reflection.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ FTDV/15	Course name: Physics of the close binaries
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 4 Per study period: 56 Course method: present	
Number of ECTS credits: 8	
Recommended semester/trimester of the course: 2.	
Course level: III.	
Prerequisites:	
Conditions for course completion: To successfully complete the course, it is necessary for the student to demonstrate a sufficient understanding of the physical processes that take place in close binary stars, such as mass transfer, the formation of the accretion disk, as well as to know about their origin and development. Lectures are organized in blocks and the course ends with a final oral exam. Credit evaluation of the course takes into account the following student workload: direct teaching (2 credit), self-study (3 credits), individual consultations (2 credit), and exam (1 credit).	
Learning outcomes: After completing the lectures, the student will have knowledge of the formation and development of close binary stars, of the processes that take place between the two components, such as mass transfer, the formation of the accretion disk and tidal pulsations. They will be able to determine the photometric and absolute parameters of the components and the path elements.	
Brief outline of the course: Kopal's classification of close binaries. Creation and evolution of close binaries. Physical processes in close binaries: mass transfer, outflow, tidal pulsations, accretion disks, mass flows. Methods of observations: photometry, spectroscopy, interferometry, polarimetry, Doppler tomography. Determination of orbital parameters and absolute parameters of bodies.	
Recommended literature: 1. Hilditch, R.W.: 2001, An introduction to Close binary Stars, Cambridge University Press 2. Kallrath, J., Milone, E.F.: 1999, Eclipsing Binary Stars, Springer Verlag 3. University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: KPPaPZ/PsVU/17	Course name: Psychology for University Lecturers
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: Per study period: 28s Course method: present	
Number of ECTS credits: 5	
Recommended semester/trimester of the course:	
Course level: III.	
Prerequisites:	
Conditions for course completion: Case study, micro-output, its analysis Current modifications of the course are listed in the electronic bulletin board of the course.	
Learning outcomes: After completing the course, students can: and Understand, summarize and explain selected psychological knowledge from cognitive psychology, emotion and motivation psychology, personality psychology, developmental, social, educational psychology and health psychology. b) apply the above psychological knowledge necessary for the professional, competent performance of university teaching practice of doctoral students c) to create and implement the teaching of a professional topic with applied psychological knowledge d) evaluate their performance and the performance of their classmates, provide feedback	
Brief outline of the course: The content of the course is based on selected psychological knowledge of cognitive psychology, psychology of emotions and motivation, personality psychology, developmental, social, educational psychology and health psychology. Teaching is realized by a combination of lectures with interactive, experiential methods, discussion, open communication with mutual respect, support of independence, activity and motivation of students. Syllabus: University teacher and his work in the teaching process with a focus on: teachers in relation to themselves (cognitive, personal, social and competencies in the use of methods), in relation to students and as part of the teacher-student relationship on the basis of selected areas of cognitive psychology, psychology of emotions and motivation, developmental psychology, social psychology, educational psychology and health psychology with application to the university environment

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ KTPA/15	Course name: Quantum field theory
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 4 Per study period: 56 Course method: present	
Number of ECTS credits: 8	
Recommended semester/trimester of the course: 2.	
Course level: III.	
Prerequisites:	
Conditions for course completion: Exam	
Learning outcomes: To acquaint with quantum field theory methods and their application in theory of elementary particles and astrophysics.	
Brief outline of the course: 1. Quantum field, Lagrange formalism, interacting quantum fields, Wick theorems and Feynman diagrammatic technique, higher orders of perturbation theory. 2. Application of quantum field theory in the theory of elementary particles: standard model, unified theories of elementary particles. 3. Application of quantum field theory in statistical physics. Feynman diagrams. 4. Critical dynamics and description of scaling at phase transitions by means of quantum-field technique and renormalization group. Selection of aforementioned topics will be made by supervisor according to the content and aims of PhD thesis

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ SASTb/15	Course name: Seminar in Astrophysics
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: 3 Per study period: 42 Course method: present	
Number of ECTS credits: 3	
Recommended semester/trimester of the course: 2.	
Course level: III.	
Prerequisites:	
Conditions for course completion: To successfully complete the course, the student must demonstrate progress in the preparation of the dissertation thesis and present the partial results. The credit evaluation of the course takes into account the following student workload: self-study (2 credits), evaluation - presentation of an interim report on the preparation of the dissertation (1 credit). The minimum threshold for completing the course is to obtain at least 50% of the total score, using the following rating scale: passed (50-100%), failed (0-49%).	
Learning outcomes: The student will master the methods and procedures for solving scientific problems and demonstrate the ability to solve them independently and creatively in accordance with current scientific methods and procedures used in astrophysics. The student is also able to critically approach the analysis of possible research tasks and the creation of models. After completing the course, the student will be able to evaluate the progress of preparing the dissertation thesis and based on comments and recommendations will be able to modify the next steps in its preparation.	
Brief outline of the course: Study of assigned problems, acquisition of literary sources and observational data. Processing and analysis of observational data, physical interpretation of results. Processing and presentation of achieved partial results of the dissertation thesis. Consultations of the processes and results of dissertation thesis.	
Recommended literature: Current papers in astronomical and astrophysical journals. According to the topic of particular dissertation thesis.

After completing the course, the student will be able to evaluate the progress of preparing the dissertation thesis and based on comments and recommendations will be able to modify the next steps in its preparation.	
Brief outline of the course: Study of assigned problems, acquisition of literary sources and observational data. Processing and analysis of observational data, physical interpretation of results. Processing and presentation of achieved partial results of the dissertation thesis. Consultations of the processes and results of dissertation thesis.	
Recommended literature: Current papers in astronomical and astrophysical journals. According to the topic of particular dissertation thesis.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ SASTc/15	Course name: Seminar in astrophysics
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: 3 Per study period: 42 Course method: present	
Number of ECTS credits: 3	
Recommended semester/trimester of the course: 3.	
Course level: III.	
Prerequisites:	
Conditions for course completion: To successfully complete the course, the student must demonstrate progress in the preparation of the dissertation thesis and present the partial results. The credit evaluation of the course takes into account the following student workload: self-study (2 credits), evaluation - presentation of an interim report on the preparation of the dissertation (1 credit). The minimum threshold for completing the course is to obtain at least 50% of the total score, using the following rating scale: passed (50-100%), failed (0-49%).	
Learning outcomes: The student will master the methods and procedures for solving scientific problems and demonstrate the ability to solve them independently and creatively in accordance with current scientific methods and procedures used in astrophysics. The student is also able to critically approach the analysis of possible research tasks and the creation of models. After completing the course, the student will be able to evaluate the progress of preparing the dissertation thesis and based on comments and recommendations will be able to modify the next steps in its preparation.	
Brief outline of the course: Study of assigned problems, acquisition of literary sources and observational data. Processing and analysis of observational data, physical interpretation of results. COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ SLAA/15	Course name: Solar activity
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 4 Per study period: 56 Course method: present	
Number of ECTS credits: 8	
Recommended semester/trimester of the course: 2.	
Course level: III.	
Prerequisites:	
Conditions for course completion: To successfully complete the course, it is necessary for the student to demonstrate a sufficient degree of understanding of the relationship between the solar interior and cycles of solar activity and understand the influence of the magnetic field on the activity and energy transfer in the Sun's atmosphere. Lectures are organized in blocks and the course ends with a final oral exam. The credit evaluation of the course takes into account the following student workload: direct teaching (2 credit), self-study (3 credits), individual consultations (2 credit), and exam (1 credit).	
Learning outcomes: After completing the lectures, the student will have knowledge of the physical properties of plasma in the solar interior and in the solar atmosphere, the influence of the magnetic field on the active areas. Gain knowledge about the cycle of solar activity and energy transfer between the layers of the solar atmosphere.	
Brief outline of the course: Solar interior - solar activity cycles, Tachocline, solar atmosphere - energy transfer and radiation, magnetic field of the Sun and active regions, solar spots, eruptions, coronal mass ejections, Solar dynamics, Helioseismology

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚFV/ SPKD/15	Course name: Spectroscopy
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 4 Per study period: 56 Course method: present	
Number of ECTS credits: 8	
Recommended semester/trimester of the course: 1.	
Course level: III.	
Prerequisites:	
Conditions for course completion: To successfully complete the course, the student must demonstrate sufficient understanding of the basics of acquisition, processing, and analysis of stellar spectra. Knowledge of different types of spectroscopic instruments and detectors is required, as well as knowledge of the practical determination of the properties of the stellar continuum and spectral lines. The condition for obtaining credits is preparation of seminar essay and passing an oral exam, which consists of three theoretical questions within the curriculum presented during the course. The credit evaluation of the course considers the following student workload: direct teaching (2 credits), self-study (3 credits), individual consultations (2 credits) and assessment (1 credit). The minimum threshold for completing the course is to obtain at least 50% of the total score, using the following rating scale: passed (50-100%), failed (0-49%).	
Learning outcomes: After completing the lectures, the student will master the basics of acquisition, reduction, and analysis of stellar spectra. It will also have sufficient physical knowledge and mathematical apparatus to independently solve a wide range of astronomical problems related to the analysis of stellar spectra, such as determining the properties of the stellar continuum and spectral lines.	
Brief outline of the course: 1. Spectroscopic tools: spectrographs, diffraction and blazed reflection gratings. Shadowing, grating ghosts, satellites, and anomalies. Spectrograph cameras. Echelle spectrographs. Interferometers. 2. Detectors: Quantum efficiency and spectral response. Linearity, detector background output, noise, signal to noise ratio, dynamic range and well capacity. Spatial and spectral resolution. 3. The measurement and the behaviour of stellar continua: ultra-low resolution spectrographs and continuum scanners. Absolute calibration, photometric standard stars, measured continua. Continua from photospheric models. Line absorption. A comparison of models to stellar continua. Bolometric flux. 4. The measurement of spectral lines: The coude grating spectrograph, the Richardson image slicer, diffraction grating spectrographs. Instrumental profile, the reconstruction process, noise. The discrete Fourier transform. Measurement of the instrumental profile. Scattered light: measurement and correction.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: Dek. PF UPJŠ/JSD/14	Course name: Spring School for PhD Students
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: Per study period: 4d Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course:	
Course level: III.	
Prerequisites:	
Conditions for course completion: Active participation in the Spring School of PhD students of UPJŠ.	
Learning outcomes: By actively participating in the Spring School of PhD Students of UPJŠ, the PhD student demonstrates a high level of ability to process the issues of his dissertation for a multidisciplinary audience with an emphasis on clarifying the motivation, scientific problem, processing methodology and own contribution to the solution of the selected topic. The PhD student demonstrates the ability to professionally discuss various research topics, present his own positions and accept a plurality of opinions. Demonstrates the ability to communicate research results to a wider professional audience with adequate means and through the Slovak language.	
Brief outline of the course: 1. Interdisciplinary lectures from the fields of medicine, natural sciences, law, public affairs, humanities. Lecturers - top foreign or national experts from the mentioned fields. 2. Scientific lectures in sections created within related disciplines. Lecturers - top experts from UPJŠ from the mentioned fields. 3. Scientific contributions of PhD students in sections of related fields. 4. Panel discussions on the issue of PhD studies and current trends in the development of scientific disciplines at UPJŠ.
