Learning outcomes: The main goal of the course is to acquaint students with cognitive psychology, as a scientific discipline that deals with the study of human cognition, and to provide them with the current knowledge related to human cognition. In addition, the course also emphasizes the ability to properly understand this knowledge and apply it. For this purpose, the course provides not only an overview of the main theories of selected cognitive processes and the broader context of the discipline but also practical illustrations and systematic encouragement of critical thinking. The main goal of seminars is to train the ability to use and adequately present the acquired knowledge, connect this knowledge to other related areas, think about it independently, discuss it critically and, last but not least, to flexibly and creatively solve various related model activities.	

The information will be yearly specified on the electronic noticeboard of the course in AiS2, alternatively in LMS UPJŠ or MS Teams environment.

Recommended semester/trimester of the course: 1.

Prerequisites:	
Conditions for course completion: Lectures and practical exercises, original drawing of some parts of animal body or it derivatives, examination.	
Learning outcomes: The student will acquire basic knowledge about the principles of building the animal body from the simplest protostomian invertebrates to vertebrates. Despite the huge taxonomic diversity of animals, their bodies can be interpreted by a relatively limited number of building principles that correspond to the systematic position of the examined animal and functional adaptations to the environment and way of life. The subject examines the structure of the body at the level of organs and organ systems, by applying the method of comparison it seeks general principles and also peculiarities. It is also important to get acquainted with the principal terms, which the student will use in the spectrum of other study subjects.

Notes: The study of the animal body structure of animals is a very old scientific discipline that has accumulated a vast amount of detailed knowledge. Comparing them is not only a way to put the knowledge into a comprehensive system, but mainly a way to find general anatomical rules that are tied to one of the animal's phylogenetic lineage or have general validity and reveal the degree of phylogenetic relationship of animals or the degree of adaptation to the environment	

and a way of life. A brief summary of the phylogeny of the animal body building plan and organ systems using the knowledge of classical and modern comparative morphological approach, supported by knowledge of embryology and molecular data for interpretation of the phenotype are the content of this course.

Recommended semester/trimester of the course: 1.	
Course level: I.	
Prerequisites:	
Conditions for course completion: Rating Conditions of continuous control and awarding of assessment: Active participation in teaching, the student has assignments during the semester - 2 assignments (Electronic subject bulletin board). During the semester, students take a knowledge test and a final knowledge test. If the teaching is carried out in a classical way - face-to-face form of teaching. In the case of the distance form of study, emphasis is placed on independent study and written processing of assignments (seminar work as a project for the entire semester, submission of partial outputs by the specified date. Electronic bulletin board). The condition for registering for the exam is to pass the final written test on the basic problems that are connected with the development of philosophical thinking from Thales to Nietzsche. Conditions for awarding the exam: only after successfully passing the knowledge test - the final test, the student can take the written exam. After its successful implementation, the student will receive credits for the subject.	
Learning outcomes: Students will gain an understanding of the fundamental issues in the history of philosophy from Thales to Nietzsche. The discipline presents an overview of more specialized philosophical topics and works that influenced the development of disciplines such as psychology and social work. Students will acquire basic terminology from philosophy by studying source texts of periods of the history of philosophy in relation to the discipline of their field of study. The student acquires the ability for a deeper understanding of historical events, where the emphasis is placed on critical thinking with an emphasis on self-knowledge. The information is updated annually in the subject's electronic message board in AIS2 or in the MS Teams environment.

Conditions for course completion: The condition for awarding the evaluation will be the active approach of students to fulfilling their study obligations, independent work with selected philosophical texts in the library, active participation and creative work in seminars. In connection with the possibility of interrupting face-to-face teaching, there will be greater demands on the student's independent study and the processing of professional literature, which will be continuously evaluated, using e-mail to communicate with the teacher, at the end of the semester, preparing and handing in the semester's seminar work by the set date, or also passing a knowledge test - about which the students will be informed in advance in sufficient time.	
Learning outcomes: Deepening knowledge about the development of spiritual culture in the European spiritual space and pointing out the most important sources of this development: (1) ancient philosophy and science, (2) Christianity as the second pillar of Europe, (3) the Renaissance and the emergence of modern science (mathematical natural science) as the third pillar of European development. Development of critical thinking skills, active position in professional (ethics of science), public and private life (ethics of responsibility). Learning outcomes: After completing the subject, the student is oriented in various aspects of phytogeographic issues and can apply the acquired knowledge both in basic research within chorology, historical and regional phytogeography, as well as in the evaluation of world biomes. The practical application of the subject is within the study of geographically and climatically conditioned changes in vegetation, in the assessment of the reduction of biodiversity and the extinction of the natural plant communities of the Earth, and the acquired knowledge can be used in work in environmental protection.	
Brief outline of the course: 1. History of the subject. Plants and environment. Dynamics of the earth's surface. 2. Abiotic and biotic factors of the plant environment. 3. Chorology, range, areal disjunctions, relics, endemism, vicarism. 4. Elements of flora - older and newer approaches. 5. Main features of florogenesis. Paleozoic, Mesozoic, Cenozoic. 6. Main features of florogenesis. Cenozoic - Pleistocene, Holocene. 7. Basics of GIS (geographic information systems) and their use in botanical research. 8. Postglacial development of vegetation in Slovakia. 9. Current changes in terrestrial vegetation and their study, plant invasions. 10. Geography of vegetation: from tropical rainforests to tundra I. 11. Geography of vegetation: from tropical rainforests to tundra II. 12. Geographical origin of cultivated plants. Seminars and exercises consist of a 5-hour excursion focusing on the connections and conditionality of plant distribution and indoor exercises focusing on an overview of phytogeographical literature, atlases of plant distribution and their importance, types of mapping, types of areas, practical	

assessment of floristic elements and types of disjunctions , work with maps of specific taxa throughout Europe. Further: regional phytogeography of the Earth, historical overview of opinions on the phytogeographical (floristic) division of Slovakia. Plant phylogeography. Prerequisites: ÚBEV/VB1/01	
Conditions for course completion: 1. Active participation in laboratory practicals. In case of justified non-participation, the teacher will determine an alternative form of lessons. 2. Before the practicals, the students will study the main points of the task that will be carried out. Students will receive an exact list of tasks according to individual lessons at the beginning of the semester. 3. Students make a written report of the practicals. The students will evaluate the results of the tasks and form a conclusion. The protocols are handed over to the teacher before the next lessons at the latest. The teacher checks the protocols and, in case of errors, returns the protocols for revision. If the submitted protocol is correct, the task is considered validly completed. 4. Practical tasks are considered to have been completed when at least 10 practical tasks are validly completed. Completion of practicals by the end of the semester at the latest (the date will be specified by the teacher) is obligatory for participation in the exam. 5. The activity in the practicals is evaluated by means of an ongoing point evaluation. A student can get 1-3 points. Obtaining 2 points is considered a standard completion of practicals. The best students can get 3 points for high-quality performance in the laboratory or excellent protocols. On the other hand, 1 point will be awarded to students who completed the practicals despite the teacher's minor reservations. 6. The examination of the subject takes place orally. Students need to answer to three questions and have a max. 30 minutes to prepare them. Any changes or modifications to the conditions for completing the subject due to the COVID19 pandemic or other serious reasons are continuously posted on the subject's electronic board.
