| <b>Faculty:</b> Faculty of Science   |                                  |
| <b>Course ID:</b> ÚFV/<br>ASFU/15  | <b>Course name:</b> Astrophysics |
| <b>Course type, scope and the method:</b><br><b>Course type:</b> Lecture<br><b>Recommended course-load (hours):</b><br><b>Per week:</b> 3 <b>Per study period:</b> 42<br><b>Course method:</b> present   |                                  |
| <b>Number of ECTS credits:</b> 3   |                                  |
| <b>Recommended semester/trimester of the course:</b> 3.  |                                  |
| <b>Course level:</b> II.   |                                  |
| <b>Prerequisites:</b>  |                                  |
| <b>Conditions for course completion:</b><br>To successfully complete the course, the student must demonstrate sufficient understanding of the basic knowledge of the structure and evolution of the universe. Knowledge of the basic properties of stars and methods of their determination, the structure, evolution and energy sources of stars, the structure of matter in the universe and its evolution is required. The condition for obtaining credits is passing a written or oral exam, preparation, and presentation of a semester essay. The credit evaluation of the course considers the following student workload: direct teaching (1 credit), self-study (2 credit) and assessment (1 credits). The minimum threshold for completing the course is to obtain at least 50% of the total score, using the following rating scale: A (90-100%), B (80-89%), C (70-79%), D (60- 69%), E (50-59%), Fx (0-49%).  |                                  |
| <b>Learning outcomes:</b><br>After completing the lectures, the student will master the basic knowledge about the properties of stars and methods of their determination, structure, evolution and energy sources of stars, the structure of matter in the universe and its evolution. It will also have sufficient physical knowledge and mathematical apparatus to enable independent solving of a various tasks related to astrophysical research.  |                                  |
| <b>Brief outline of the course:</b> <ol style="list-style-type: none"> <li>1. Basic properties of stars and methods of their determination: radiation flux, apparent and absolute magnitude, distances of stars, colors of stars.</li> <li>2. Temperature of stars, black body radiation, spectra of atoms and molecules, non-thermal radiation.</li> <li>3. Spectral classifications, luminosity classes, HR diagram, masses of stars.</li> <li>4. Structure of stars: basic equations of stellar structure, transfer of energy by radiation and convection, production of energy in stars, fusion reactions.</li> <li>5. Evolution of stars: interstellar matter and formation of stars and stellar systems, Jeans' criterion, protostars.</li> <li>6. Evolution of stars: main sequence stars, giants, final stages of star evolution - white dwarfs, neutron stars and black holes.</li> <li>7. Distribution of matter in the universe: Milky Way, its structure, dynamics, and evolution, types of galaxies, quasars, intergalactic matter, local group of galaxies.</li> </ol> |                                  |

8. Clusters and super-clusters of galaxies, large-scale structure of the universe, dark matter, and dark energy.
9. Evolution of the universe: historical development of views on the universe, Olbers's paradox, gravitational paradox, Cosmological principle.
10. Isotropy and homogeneity of the universe, relic radiation, expansion of the universe. Steady state theory.
11. Relativistic cosmology: cosmological solutions of Einstein's equations, models of the universe and their properties, theory of the expanding universe, the Big Bang, the age of the universe.
12. Origin of the universe: the initial stages of the expansion of the universe, inflationary expansion and nucleogenesis, the formation of galaxies and galaxy clusters.

| <b>Prerequisites:</b> (ÚBEV/MKVU/15 or ÚBEV/VMK/22) and ÚBEV/VEK1/03 and ÚBEV/DIB1/03  |  |
| <b>Conditions for course completion:</b><br>112 credits of the study program subjects in the prescribed composition.   |  |
| <b>Learning outcomes:</b><br>State exams in the subject of Biology and didactics of biology are held in the form of an oral exam. The student has to demonstrate professional knowledge of the drawn topic and demonstrate the ability to present them, discuss them in a broader context. Each topic is assigned a didactic problem, which is to explain and apply to the teaching of the content at the level of secondary (secondary) or primary (primary) school according to the assignment in the question.  |  |
| <b>Brief outline of the course:</b><br>The graduate will demonstrate knowledge of biological content in context. Applies didactic knowledge to the given biological content.<br>Biological content:<br>Virus architecture. Structure, nutrition, growth, reproduction and genetics of microorganisms. Pathogenicity and virulence. Organizational levels of eukaryotes. Organisms and their environment. Ecological factors. Properties and relationships of populations and communities. Structure and function of ecosystems. Energy flow in ecosystems.<br>Didactic content:<br>State educational program ISCED2, ISCED3 - Biology. Principles of expressing the cognitive goals of the teaching unit. Conceptual process and logical procedures in teaching biology. Developing students' skills and competencies. Teaching biology based on elements of research, degrees of research. Student biological project. Formative and summative assessment in the process of teaching biology. |  |

| <b>Number of ECTS credits:</b> 2  |   |
| <b>Recommended semester/trimester of the course:</b> 1., 3.   |   |
| <b>Course level:</b> II.  |   |
| <b>Prerequisites:</b>   |   |
| <b>Conditions for course completion:</b><br>Active participation in seminars. Detailed information will be given.<br>Active participation - 20%<br>Seminar work - 40%<br>Seminar work 2 - 40%   |   |
| <b>Learning outcomes:</b><br>The student will acquire the latest information about bullying in schools and its consequences, about solving problematic situations associated with bullying as well as about possible ways of prevention. Within the seminars, students will develop professional skills through the implementation of prevention activities. At the same time, their sensitivity to the issue of bullying and their willingness to actively address it during their pedagogical practice will increase. |   |
| <b>Brief outline of the course:</b><br>Aggressive behavior. Characteristics of actors of bullying (personality, characteristics of family environment). Manifestations and possible causes of bullying. Bullying as a group process. The role of teacher, school and parent in solving bullying. Possibilities of prevention of bullying at the level of school, class, individuals. Primary, secondary and tertiary prevention. Socio-psychological activities used in the prevention of bullying.                     |   |

## COURSE INFORMATION LETTER

|  |  |
|--|--|
| <b>University:</b> P. J. Šafárik University in Košice  |  |
| <b>Faculty:</b> Faculty of Science   |  |
| <b>Course ID:</b> KGER/<br>NJKG/07   | <b>Course name:</b> Communicative Grammar in German Language |
| <b>Course type, scope and the method:</b><br><b>Course type:</b> Practice<br><b>Recommended course-load (hours):</b><br><b>Per week: 2 Per study period: 28</b><br><b>Course method:</b> present   |  |
| <b>Number of ECTS credits:</b> 2   |  |
| <b>Recommended semester/trimester of the course:</b>   |  |
| <b>Course level:</b> I., II.   |  |
| <b>Prerequisites:</b>  |  |
| <b>Conditions for course completion:</b><br>Active participation in class and completed homework assignments. Students are allowed to miss 2 classes at the most (2x90 min.). 2 control tests during the semester. Final grade will be calculated as follows: A 93-100 %, B 86-92%, C 79-85%, D 72-78%, E 65-71%, FX 64 % and less.  |  |
| <b>Learning outcomes:</b><br>The aim of the course is to identify and eliminate the most frequent grammatical errors in oral and written communication, learning language skills of listening comprehension, speaking, reading and writing, increasing students' language competence (acquisition of selected phonological, lexical and syntactic knowledge), development of students' pragmatic competence (acquisition of the ability to express selected language functions), development of presentation skills, etc.  |  |
| <b>Brief outline of the course:</b><br>The course is aimed at practicing and consolidating knowledge of morphology and syntax of German in order to show the context in grammar as a whole. The course is intended for students who often make grammatical errors in oral as well as written communication. Through the analysis of texts, audio recordings, tests, grammar exercises, monologic and dialogical expressions of students focused on specific grammatical structures, problematic cases are solved individually and in groups. Emphasis is placed on the balanced development of grammatical thinking in the communication process, which ultimately contributes to the development of all four language skills. |  |

| <b>Course type, scope and the method:</b><br><b>Course type:</b> Practice<br><b>Recommended course-load (hours):</b><br><b>Per week: 2 Per study period: 28</b><br><b>Course method:</b> present  |   |
| <b>Number of ECTS credits:</b> 2  |   |
| <b>Recommended semester/trimester of the course:</b> 1.   |   |
| <b>Course level:</b> II.  |   |
| <b>Prerequisites:</b>   |   |
| <b>Conditions for course completion:</b><br>Evaluation of participation in teaching, continuous evaluation of activity in seminars, evaluation of seminar work,   |   |
| <b>Learning outcomes:</b><br>The graduate will understand the principles of developmental psychology, and will be able to characterize the norm in separate developmental stages with a specific focus on the period of school age and adolescence. As part of the seminar work, a students will process current knowledge published in foreign journals. They will have a knowledge about the current social discourse on the topics covered. The graduate will be able to consider various aspects of the possible influence of parents and friends on the development of piupils and apply the knowledge of developmental psychology in the practice of the teacher. |   |
| <b>Brief outline of the course:</b><br>Determinants and factors of development, cognitive development, personality development. Socialization in separate developmental stages (family, peers, school). Specifics of development in the period of school age, in pubescence and adolescence. Parents and their role in child development. Application of knowledge of developmental psychology in the teacher's practice - communication with students in different developmental stages, creating a teacher-student relationship with respect to the development needs of the student.   |   |

| <b>Course ID:</b> ÚBEV/<br>DIB1/03  | <b>Course name:</b> Didactics of biology |
| <b>Course type, scope and the method:</b><br><b>Course type:</b> Lecture / Practice<br><b>Recommended course-load (hours):</b><br><b>Per week:</b> 2 / 3 <b>Per study period:</b> 28 / 42<br><b>Course method:</b> present  |  |
| <b>Number of ECTS credits:</b> 6  |  |
| <b>Recommended semester/trimester of the course:</b> 2.   |  |
| <b>Course level:</b> II.  |  |
| <b>Prerequisites:</b> KPPaPZ/PPgU/15 or KPE/DPP/14 or KPE/PDU/15  |  |
| <b>Conditions for course completion:</b><br>It is a profile subject with compulsory participation in lectures and exercises.<br>Continuous control tests after each topic of the lecture, activity during the lecture, prepared and continuously submitted solutions to assignments from the exercises and the final project according to the assignment at the beginning of the semester are evaluated.<br>The final exam is usually oral, in the case of distance learning (due to an epidemic situation, for example) it can be written, and presentations and tests can be held online.<br>The share of the grade from the assessed activities on the final grade:<br>25% - continuous control tests (maximum is 100 points)*<br>20% - solutions to assignments from individual exercises (maximum is 100 points)*<br>5% - activity at the lecture (evaluation is part of the evaluation form)<br>20% - semester project (evaluation is part of the evaluation form).<br>30% - the result of the final exam: oral exam if the teaching takes place face-to-face/final online test in the case of distance learning.<br>If the student documents his ECDL certificate, he will be credited with an A grade for one third of the final exam (10% ECDL -A, 20% final exam grade = 30%).<br>* Conversion of points to a grade:<br>A minimum of 50 points out of 100 is required to pass the tests and interim assignments.<br>And 95-100<br>B 85 - 94<br>C 65 - 84<br>D 55 - 64<br>E 50 - 54<br>FX 0 - 49<br>The final grade is calculated as a weighted average according to the standard value of classification grades A to E. |  |
| <b>Learning outcomes:</b><br>Meet specific subjects teaching biology in high school and an elementary school. Learn and apply didactic knowledges in the topics of the biology curriculum with respect of psychological principles of learning. Selected biology teaching methods and technologies.   |  |

**Brief outline of the course:**

- 1 Didactics of biology in the system of sciences
- 2 Domains of biology education
- 3 Biology standards
- 4 Curriculum and textbooks in SR
- 5 Biological sciences
- 6 Complex of didactic tools of biology
- 7 Hands-on education as an educational concept
- 8 Teaching organization forms
- 9 Lesson preparation
- 10 Principles of knowledge
- 11 Formative and summative evaluation in biology
- 12 Biological educational strategies
- 13 Teaching aids of biology
- 14 School garden and the environment corner at school
- 15 Biological excursion
- 16 Working with talents and biological competitions for students

## COURSE INFORMATION LETTER

|  |   |
|--|---|
| <b>University:</b> P. J. Šafárik University in Košice  |   |
| <b>Faculty:</b> Faculty of Science   |   |
| <b>Course ID:</b><br>KPPaPZ/PUDU/15  | <b>Course name:</b> Drug Addiction Prevention in Educational Practice |
| <b>Course type, scope and the method:</b><br><b>Course type:</b> Lecture / Practice<br><b>Recommended course-load (hours):</b><br><b>Per week:</b> 2 / 1 <b>Per study period:</b> 28 / 14<br><b>Course method:</b> present   |   |
| <b>Number of ECTS credits:</b> 4   |   |
| <b>Recommended semester/trimester of the course:</b> 1., 3.  |   |
| <b>Course level:</b> II.   |   |
| <b>Prerequisites:</b>  |   |
| <b>Conditions for course completion:</b><br>1st part of the semester evaluation: active participation in the training part (30p). 2nd part of the semester evaluation: active participation in workshops (20p) 3rd part of the semester evaluation - preparation (10p) and implementation (10p) of block activities (20p, minimum 11 points). 4th part of the evaluation - written knowledge exam (20p, minimum 11 points). In total, students can get 90p and the final grade is as follows: 90 - 82: A 81 - 73: B 72 - 66: C 65 - 59: D 58 - 54: E 53 and less: FX. Detailed information in the electronic bulletin board of the course in AIS2. The teaching of the subject will be realized by a combined method.  |   |
| <b>Learning outcomes:</b><br>The student understands principals of research data based prevention of risk behavior, can describe and explain the determinants of risk behavior as well as protective and risk factors for substance use. Understands and adequately interprets the theory explaining the background of substance and non-substance addictions.<br>The student is also able to state and classify the types and forms of prevention, strategies and approaches in prevention, can distinguish effective strategies from ineffective ones.<br>The student is able to apply the learned rules, procedures and competencies for the work of a teacher in the field of drug use prevention, as well as the acquired professional skills for the work of a teacher and prevention coordinator at school. |   |
| <b>Brief outline of the course:</b><br>Psychological, pedagogical-psychological, medical and legal-forensic aspects of substance use prevention<br>Prevention of substance use based on risk and resilience<br>Primary, secondary and tertiary prevention of substance use<br>Universal, selective and indicated prevention of substance use<br>Effective substance prevention strategies based on research data<br>Preparation and implementation of components of effective substance use prevention programs  |   |

| <b>Course type, scope and the method:</b><br><b>Course type:</b> Lecture<br><b>Recommended course-load (hours):</b><br><b>Per week:</b> 3 <b>Per study period:</b> 42<br><b>Course method:</b> present   |   |
| <b>Number of ECTS credits:</b> 3   |   |
| <b>Recommended semester/trimester of the course:</b> 1., 3.  |   |
| <b>Course level:</b> II.   |   |
| <b>Prerequisites:</b>  |   |
| <b>Conditions for course completion:</b><br>Exam   |   |
| <b>Learning outcomes:</b><br>To provide information about the object, significance and role of biophysics in science. The main emphasis will be given on the understanding of the principles determining the structure and function of the most important biological structures (nucleic acids, proteins, biomembranes) as well as on the thermodynamics and kinetics of selected chemical and biophysical processes.  |   |
| <b>Brief outline of the course:</b><br>The definition of biophysics and its role in the science. Intra- and inter-molecular interactions in biological systems. Function and structure of the important biomacromolecules (nucleic acids, proteins, biomembranes, sugars). Conformational transitions in biopolymers: helix-coil transition in DNA, denaturation of proteins, phase transitions in biomembranes.<br>Thermodynamics of biological processes. Gibbs energy and chemical equilibrium, chemical potential, binding constants of the ligand-macromolecule interactions, cooperativity of the binding between biological important molecules, membrane potential.<br>Kinetics of the chemical and biophysical processes. The principles of chemical kinetics, enzymatic reactions, inhibition of the enzymes, membrane transport, introduction to the pharmacokinetics.<br>Cell biophysics. The basic bioenergetic processes, oxidative phosphorylation, photosynthesis. Mechanisms of regulations and control processes in cells-the basic principles.<br>Medicinal biophysics. Biophysical principles of selected diagnostic and therapeutical methods.<br>Radiation and environmental biophysics. The influence of physico-chemical factors of the environment on the living systems. |   |

| <b>University:</b> P. J. Šafárik University in Košice   |  |
| <b>Faculty:</b> Faculty of Science  |  |
| <b>Course ID:</b><br>KPPaPZ/UPN/17  | <b>Course name:</b> Introduction into Psychology of Religion |
| <b>Course type, scope and the method:</b><br><b>Course type:</b> Practice<br><b>Recommended course-load (hours):</b><br><b>Per week: 2 Per study period: 28</b><br><b>Course method:</b> present  |  |
| <b>Number of ECTS credits:</b> 2  |  |
| <b>Recommended semester/trimester of the course:</b> 2.   |  |
| <b>Course level:</b> II.  |  |
| <b>Prerequisites:</b>   |  |
| <b>Conditions for course completion:</b><br>The assessment is based on the interim evaluation. The subject will be taught in both present and distance format. Up-to-date information concerning the subject for the given academic year can be found on the electronic board of the subject in the Academic information system of the UPJŠ.  |  |
| <b>Learning outcomes:</b><br>The student will acquire a basic overview of the origin and current state of knowledge in the field of research and application the psychology of religion. He/she will be able to described, explaine, and evaluate this knowlege. The student will be able to apply the acquired knowledge in the basic orientation in the field, and develop critical thinking and will be able to apply and integrate already acquired knowledge from other (psychological) distributions  |  |
| <b>Brief outline of the course:</b> <ol style="list-style-type: none"> <li>1. History of psychology of religion in national and world context</li> <li>2. Psychological perspective on religion and religious experience</li> <li>3. Psychology of religion in an interdisciplinary context</li> <li>4. Basic approaches to psychological interpretation and selected views</li> <li>5. Different types of religious experience</li> <li>6. Psychological view of religion from a biodromal perspective</li> <li>7. Spirituality versus religiosity in a postmodern society</li> <li>8. Coping in the context of religiosity</li> <li>9. Psychotherapy and religion, pastoral psychology</li> </ol> |  |

## COURSE INFORMATION LETTER

|  |  |
|--|--|
| <b>University:</b> P. J. Šafárik University in Košice  |  |
| <b>Faculty:</b> Faculty of Science   |  |
| <b>Course ID:</b><br>KPPaPZ/ZMPPV/15   | <b>Course name:</b> Introduction to Research Methodology in Education and Psychology |
| <b>Course type, scope and the method:</b><br><b>Course type:</b> Lecture / Practice<br><b>Recommended course-load (hours):</b><br><b>Per week:</b> 2 / 2 <b>Per study period:</b> 28 / 28<br><b>Course method:</b> present   |  |
| <b>Number of ECTS credits:</b> 4   |  |
| <b>Recommended semester/trimester of the course:</b> 2.  |  |
| <b>Course level:</b> II.   |  |
| <b>Prerequisites:</b> KPPaPZ/PPgU/15 and KPE/PDU/15  |  |
| <b>Conditions for course completion:</b><br>- active participation in seminars, presentation of assignments in groups, final exam  |  |
| <b>Learning outcomes:</b><br>The graduate of the course will gain information about the research methodology, will understand the basic methods of pedagogical and psychological research that can be used in the practice of the teacher. Within the seminars, students will develop professional skills through their own demonstration of a specific research method. The graduate of the course will be able to carry out simple scientific research, present the results of research and read the results of the latest research in the field of pedagogy and psychology.   |  |
| <b>Brief outline of the course:</b><br>Research in pedagogy and psychology. Scientific research, scientific thinking. Parts of a research project. Research planning. Topic selection, research problem formulation. Types of research plans. Hypothesis, variables, operationalization. Ethical issues of scientific research. Experiment (experiment problems, control of variables in the experiment). Experimental plans, quasi-experiment. Reliability and validity of research. Research sample, methods of sample selection. Data collection techniques - questionnaire, interview, sociometry, semantic differential, observation, tests. Introduction to qualitative methodology. Possibilities of quantitative data processing. How to write a scientific article, presentation, poster, qualification work. Interpretation of findings, integration of findings into context. |  |

| <b>University:</b> P. J. Šafárik University in Košice  |   |
| <b>Faculty:</b> Faculty of Science   |   |
| <b>Course ID:</b> ÚFV/MFDF/15  | <b>Course name:</b> Modern Physics from Didactics Point of View |
| <b>Course type, scope and the method:</b><br><b>Course type:</b> Lecture / Practice<br><b>Recommended course-load (hours):</b><br><b>Per week:</b> 2 / 1 <b>Per study period:</b> 28 / 14<br><b>Course method:</b> present   |   |
| <b>Number of ECTS credits:</b> 3   |   |
| <b>Recommended semester/trimester of the course:</b> 1.  |   |
| <b>Course level:</b> II.   |   |
| <b>Prerequisites:</b>  |   |
| <b>Conditions for course completion:</b><br>Summary evaluation based on ongoing assessment:<br>1. Practical ongoing assignments (at least 50% needed)<br>3. Active participation during face-to-face contact learning in classical or virtual classroom (3 absences allowed) and during online learning (no absence, uploading all ongoing assignments)  |   |
| <b>Learning outcomes:</b><br>Student should<br>1. Achieve better conceptual understanding and an integrated view on fundamental ideas of contemporary modern physics, which every future physicist and physics teacher should have. (Emphasis is not on abstract mathematical methods, but on using most recent knowledge and tools of Physics Education Research - computer modeling of physical phenomena and employing only elementary algebra and calculus.)<br>2. Get physical intuition and experience dealing with practical applications of modern physics.  |   |
| <b>Brief outline of the course:</b><br>01.-05. Fundamental ideas of modern mechanics: scales, symmetry, event, worldline, spacetime diagram, principle of least action, conservation laws; practical applications.<br>06.-09. Fundamental ideas of relativity: principle of relativity, space-time interval, conservation of momentum, metrics, principle of maximal aging; practical applications.<br>10.-13. Fundamental ideas of quantum mechanics: probability amplitude, principle of democracy of histories, rules for amplitudes, propagator, Schrödinger's equation, stationary state, Feynman's diagrams; practical applications. |   |

| <b>Course level:</b> II.  |   |
| <b>Prerequisites:</b> KPE/PDU/15 and KPPaPZ/PPgU/15   |   |
| <b>Conditions for course completion:</b><br>Obtaining the required number of credits in the prescribed composition by the study plan.   |   |
| <b>Learning outcomes:</b><br>Verification of the acquired competencies of the student in accordance with the profile of the graduate.ie required number of credits in the prescribed composition by the study plan.   |   |
| <b>Brief outline of the course:</b><br>Pedagogy: 1. Pedagogy, basic pedagogical categories, system of pedagogical scientific disciplines. 2. Education, pages and functions of education, educational process, self-education.3. Factors of education, educated individual, pedagogue, pedagogical profession, professional competencies.4. School education, family education. 5. Educational goals, taxonomy, requirements, classification of educational goals.6. Methods of education. 7. Pedagogical principles. 8. School system of the Slovak Republic. 9. Didactics, basic questions of didactics, current starting points of didactics. 10. Objectives of the teaching process, the teacher's work with the objectives of teaching.11. Content of education, basic curriculum, extension curriculum, elements and components of curriculum. 12. Assessment in school education, types, functions and criteria of assessment.13. Pedagogical control, methods and forms of pedagogical control.14. Teacher's work planning, written preparation of the teacher for teaching.15. Teaching process, stages of the teaching process and their didactic functions.16. Organizational forms of teaching, lesson, stages, types of lessons.17. Teaching methods, classification, functions, selection of teaching methods. 18. Didactic principles of the teaching process. 19. Basic pedagogical documents, textbook, functions and structural components of the textbook.20. Current concepts of the teaching process.<br>Psychology: 1.Psychology as a science, goals and subject of psychology in terms of influential psychological directions.2.Pedagogical psychology in teacher training, its subject, function.3.Psychology in school practice: professional forms of control and assistance, psychological examination, counseling process. Crisis intervention. Code of ethics.4.Psychology in school practice: approaches and models of prevention, prevention spectrum, protective and risk factors of risk behavior of schoolchildren in the context of the theory of triadic influence.5.Psychology in school practice: effective strategies for prevention of substance use.6.Psychology of education from from the point of view of psychodynamic approach (Psychoanalysis and Individual Psychology) .7.Psychology of education from the point of |   |

view of humanistic psychology.8. Psychology of education from the point of view of cognitive psychology.9. Psychology of learning and types of learning supplemented by examples from school practice. / success in the context of individual theories of cognitive development.11. Nutritional peculiarities, school non-success / intelligence in terms of intelligence.12. Memory and developmental peculiarities, school non-success 13. Attention and developmental peculiarities, school non / success peculiarities of individual types of family, educational styles.15. Social relations at school, the modes of cognition of interaction U and Ž. Psychosocial climate of school class and school, methods of cognition, sociometry.16. Social influence: presence of others, interpersonal influences and meaningful understanding of social influence in teacher's work.17. Teacher as a professional, his professional ability, teaching style, attitudes towards students, expectations towards students, coping with stress, burnout syndrome.18. Students: gifted and talented, school failure, non-thriving pupils and failing pupils, pupils' self-efficacy.19. Types of research plans and their creation (setting goals, hypotheses, variables, selection of research sample) in the context of pedagogical-psychological research.20. Selected methods of pedagogical-psychological research - questionnaire, interview, observation and possibilities of their use in school practice.

## COURSE INFORMATION LETTER

|  |  |
|--|--|
| <b>University:</b> P. J. Šafárik University in Košice  |  |
| <b>Faculty:</b> Faculty of Science   |  |
| <b>Course ID:</b> ÚFV/<br>FPK1/15  | <b>Course name:</b> Phase Transitions and Critical Phenomena |
| <b>Course type, scope and the method:</b><br><b>Course type:</b> Lecture<br><b>Recommended course-load (hours):</b><br><b>Per week:</b> 3 <b>Per study period:</b> 42<br><b>Course method:</b> present   |  |
| <b>Number of ECTS credits:</b> 3   |  |
| <b>Recommended semester/trimester of the course:</b> 2.  |  |
| <b>Course level:</b> II.   |  |
| <b>Prerequisites:</b>  |  |
| <b>Conditions for course completion:</b><br>To successfully complete the course, the student is required to understand the concept of phase transitions and critical phenomena based on thermodynamics and statistical physics. The successful graduate will be able to apply this apparatus to simpler models of magnetic systems using exact or approximate methods. The condition for obtaining credits is successful completion of 2 written tests. The credit evaluation of the course takes into account the following student workload: direct teaching (2 credits) and assessment (1 credit). The minimum limit for completing the course is to obtain at least 50% of the total score, using the following rating scale: A (90-100%), B (80-89%), C (70-79%), D (60- 69%), E (50-59%), F (0-49%).   |  |
| <b>Learning outcomes:</b><br>To acquaint students with the basic problems of the theory of phase transitions and critical phenomena and their solutions using the methods of thermodynamics and statistical physics. Emphasis is placed on the study of phase transitions in magnetic systems, through several theoretical models.   |  |
| <b>Brief outline of the course:</b> <ol style="list-style-type: none"> <li>1. Thermodynamics and phase transitions.</li> <li>2. Conditions of stability of the equilibrium state of the magnetic system.</li> <li>3. Phase equilibrium, phase transitions. Clausius-Clapeyron equation.</li> <li>4. Classical (Ehrenfest) classification of phase transitions: phase transitions of the first and second kind.</li> <li>5. Landau's description of phase transitions of the second kind.</li> <li>6. Critical indices, universality. Definition of critical indices for the magnetic system. Thermodynamic relations between critical indices.</li> <li>7. Basic microscopic models of magnetic phase transitions. Heisenberg and Ising model.</li> <li>8. Exact solutions of microscopic models: one-dimensional and two-dimensional Ising model.</li> <li>9. Thermodynamic functions for a one-dimensional Ising model.</li> <li>10. Some approximate methods of solving the Ising model.</li> <li>11. Phenomenological theory of phase transitions.</li> <li>12. Landau's theory of phase transitions.</li> </ol> |  |

| <b>Course ID:</b> ÚBEV/<br>FG1/03  | <b>Course name:</b> Phytogeography |
| <b>Course type, scope and the method:</b><br><b>Course type:</b> Lecture / Practice<br><b>Recommended course-load (hours):</b><br><b>Per week:</b> 2 / 1 <b>Per study period:</b> 28 / 14<br><b>Course method:</b> present   |                                    |
| <b>Number of ECTS credits:</b> 5   |                                    |
| <b>Recommended semester/trimester of the course:</b> 1., 3.  |                                    |
| <b>Course level:</b> I., II.   |                                    |
| <b>Prerequisites:</b>  |                                    |
| <b>Conditions for course completion:</b><br>1. Lectures are optional, but highly recommended due to the presentation of otherwise difficult-to-access information and its synthesis.<br>2. In addition to the exam, the student must complete a mandatory 5-hour field trip focusing on the aspects that determine the spread of plants on Earth, solve practical tasks from the topic of the subject and prepare a semester presentation on the given topic, the presentation is defended at a scientific mini-conference.  |                                    |
| <b>Learning outcomes:</b><br>After completing the subject, the student is oriented in various aspects of phytogeographic issues and can apply the acquired knowledge both in basic research within chorology, historical and regional phytogeography, as well as in the evaluation of world biomes. The practical application of the subject is within the study of geographically and climatically conditioned changes in vegetation, in the assessment of the reduction of biodiversity and the extinction of the natural plant communities of the Earth, and the acquired knowledge can be used in work in environmental protection.  |                                    |
| <b>Brief outline of the course:</b><br>1. History of the subject. Plants and environment. Dynamics of the earth's surface.<br>2. Abiotic and biotic factors of the plant environment.<br>3. Chorology, range, areal disjunctions, relics, endemism, vicarism.<br>4. Elements of flora - older and newer approaches.<br>5. Main features of florogenesis. Paleozoic, Mesozoic, Cenozoic.<br>6. Main features of florogenesis. Cenozoic - Pleistocene, Holocene.<br>7. Basics of GIS (geographic information systems) and their use in botanical research.<br>8. Postglacial development of vegetation in Slovakia.<br>9. Current changes in terrestrial vegetation and their study, plant invasions.<br>10. Geography of vegetation: from tropical rainforests to tundra I.<br>11. Geography of vegetation: from tropical rainforests to tundra II.<br>12. Geographical origin of cultivated plants.<br>Seminars and exercises consist of a 5-hour excursion focusing on the connections and conditionality of plant distribution and indoor exercises focusing on an overview of phytogeographical literature, atlases of plant distribution and their importance, types of mapping, types of areas, practical |                                    |

| <b>University:</b> P. J. Šafárik University in Košice  |   |
| <b>Faculty:</b> Faculty of Science   |   |
| <b>Course ID:</b><br>KPPaPZ/KPE/<br>EPU/15   | <b>Course name:</b> Professional Ethics for Teachers and School Counsellors |
| <b>Course type, scope and the method:</b><br><b>Course type:</b> Practice<br><b>Recommended course-load (hours):</b><br><b>Per week: 2 Per study period: 28</b><br><b>Course method:</b> present   |   |
| <b>Number of ECTS credits:</b> 2   |   |
| <b>Recommended semester/trimester of the course:</b> 2., 4.  |   |
| <b>Course level:</b> II.   |   |
| <b>Prerequisites:</b>  |   |
| <b>Conditions for course completion:</b><br>1. Active participation in seminars (max. 1 absence) - 30p, 2. Preparation for the seminar - 40p, 3. Preparation (description and analysis) of the moral dilemma - 30p. By summing the points obtained during the semester, the student obtains the final evaluation according to the scale: A 87 - 100, B 77 - 86, C 69 - 76, D 61 - 68, E 56 - 60, FX 55 and less. Detailed information in the electronic board of the course in AIS2. The teaching of the subject will be realized by a combined method.  |   |
| <b>Learning outcomes:</b><br>The student will understand the principles of teacher ethics and the ethics of the educational counselor as one of the branch types of professional ethics. The student can theoretically reflect on the ethical and moral issues of the teaching profession and the function of the educational counselor (including the formulation of moral values, principles and standards of the teaching profession and the function of the educational counselor in the form of codes of ethics). He is able to analyze and solve practical moral problems in pedagogical practice, which supports the development of professional skills of students. The student is able to critically evaluate situations with a moral context thanks to the opportunity to discuss moral and ethical issues in an open way.   |   |
| <b>Brief outline of the course:</b><br>Moral emotions (theories of emotion, the center of emotions in the brain, types of emotions and their manifestations)<br>Development of moral reasoning, cognitive approaches to moral reasoning and their comparison (Piaget, Kohlberg, Gilligan, Eisenberg, Selman, Lind),<br>Moral behavior (from the point of view of learning theories) and moral (vs. social and emotional) intelligence in the work of a teacher<br>Possibilities of examining moral behavior and judgment (socio-psychological research of conformity, obedience, aggression and psychodiagnostic approaches to the determination of moral judgment)<br>Morality and professional ethics in general (ethical principles in helping professions) and codes of ethics<br>Professional ethics of the teacher and educational counselor (terminology, concepts, main principles of teacher ethics) and teacher ethics codes |   |

Moral dilemmas and ways of solving them, MD of teaching practice  
Possibilities of influencing and stimulating moral judgment, use of moral dilemma in education  
Cheating and other unethical manifestations in the school environment, ethics and etiquette of final exams

## COURSE INFORMATION LETTER

|  |   |
|--|---|
| <b>University:</b> P. J. Šafárik University in Košice  |   |
| <b>Faculty:</b> Faculty of Science   |   |
| <b>Course ID:</b><br>KPPaPZ/PTPN/17  | <b>Course name:</b> Psychology of Creativity and Working with Gifted Students in Teacher Practice |
| <b>Course type, scope and the method:</b><br><b>Course type:</b> Practice<br><b>Recommended course-load (hours):</b><br><b>Per week: 2 Per study period: 28</b><br><b>Course method:</b> present   |   |
| <b>Number of ECTS credits:</b> 2   |   |
| <b>Recommended semester/trimester of the course:</b> 2.  |   |
| <b>Course level:</b> II.   |   |
| <b>Prerequisites:</b>  |   |
| <b>Conditions for course completion:</b><br>1. active participation in lessons (max. 2 absences) - 30p, 2. own output at the seminar - 40p, 3. seminar work - 30p. By summing the points obtained during the semester, the student obtains the final evaluation according to the given scale: A 87 - 100, B 77 - 86, C 69 - 76, D 61 - 68, E 56 - 60, FX 55 and less. Detailed information in the electronic board of the course in AIS2. The teaching of the subject will be realized by a combined method.     |   |
| <b>Learning outcomes:</b><br>The student understands the basic factors and process of creativity. The student is able to explain the specifics of working with the gifted. He knows the methods of identifying talent and also can apply methods to support creativity and the development of talent in the implementation of creative creativity in education.  |   |
| <b>Brief outline of the course:</b><br>The concept of creativity.<br>A brief history of the theory of creativity.<br>Social, psychological and biological factors of creativity.<br>Cognitive processes in creativity.<br>Creativity and cognitive style.<br>Development of creativity.<br>Talent and giftedness.<br>Methods of determining creativity and talent.<br>Methods of developing creativity and talent.<br>Creativity and talent development programs. Specifics of working with the gifted children. |   |

| <b>Recommended semester/trimester of the course:</b> 3.   |   |
| <b>Course level:</b> II.  |   |
| <b>Prerequisites:</b>   |   |
| <b>Conditions for course completion:</b><br>Didactic analysis after conducted experiments and observations. Semester Project Methodology of practical exercise on the chosen topic biology curriculum, presentation and demonstration of integrated experiment at the end of the semester.  |   |
| <b>Learning outcomes:</b><br>Teacher preparation, how to carry out biological school experiments and classroom observations.  |   |
| <b>Brief outline of the course:</b><br>The course is aimed at training and application skills that are necessary for the implementation of experiments and observations in the classroom. It helps students develop theoretical knowledge in practical work during training and familiarizes them with didactic methods in demonstrating the biological observation and educational experiments. It focuses on the possibilities of applying these methods in the various stages of a teaching unit.  |   |

| <b>Conditions for course completion:</b><br>Seminar work – a project dealing with hands-on experiments and their role in Physics teaching.<br>Oral examination  |     |  |     |     |     |
| <b>Learning outcomes:</b><br>The goal of the course is to develop pedagogic skills and creativity of future Physics teachers through non-traditional physical experiments.  |     |  |     |     |     |
| <b>Brief outline of the course:</b><br>The aim of the lecture is to show a lot of non-traditional physical experiments which can help students understand physical phenomena and find their connection with everyday life. The experiments are mainly hands-on ones which can be performed with simple tools and don't require any special equipment. The experiments are carried out by students themselves. Through these experiments students are able to gain practical skills, develop experimental habits and verify their theoretical knowledge. |     |  |     |     |     |

| <b>University:</b> P. J. Šafárik University in Košice  |   |
| <b>Faculty:</b> Faculty of Science   |   |
| <b>Course ID:</b> ÚFV/<br>FKS/15   | <b>Course name:</b> Solid State Physics |
| <b>Course type, scope and the method:</b><br><b>Course type:</b> Lecture<br><b>Recommended course-load (hours):</b><br><b>Per week:</b> 3 <b>Per study period:</b> 42<br><b>Course method:</b> present   |   |
| <b>Number of ECTS credits:</b> 3   |   |
| <b>Recommended semester/trimester of the course:</b> 1.  |   |
| <b>Course level:</b> II.   |   |
| <b>Prerequisites:</b>  |   |
| <b>Conditions for course completion:</b><br>Successful passing the course requires presentation of adequate knowledge of concepts, phenomena and laws from Condensed Matter Physics. Knowledge of structural, mechanic, electric, thermal, transport and magnetic properties of solids and potential possibilities of their practical applications. The number of credits reflects the extent of the course (3 hours of lectures) and the fact that the contents of the course represents part of state exam in master degree.<br>During semester students will pass two written tests and oral exam at the end of the semester. Threshold for successful passing the course is 50 % of the sum of obtained scores from the tests and oral exam. Maximal total score from both tests represents 30 % from the total score.<br>The scale of the total score is defined as follows:<br>A 100-91%<br>B 90-81%<br>C 80-71%<br>D 70-61%<br>E 60-50%<br>Fx 49-0% |   |
| <b>Learning outcomes:</b><br>Successful passing the course will significantly contribute to the expertise of the student in physics. Student will learn basic concepts in Condensed matter physics and understand phenomena in solids. He will also learn selected theoretical approaches and used experimental techniques in Condensed matter physics. In addition, he will also be able to interpret simple experimental observations based on quantum-mechanical phenomena.   |   |
| <b>Brief outline of the course:</b><br>1. week: Structure of crystals. Amorphous materials. Space and crystal lattice, elementary cell. Bravais lattices and crystallographic systems. Directions and planes in a crystal lattice – Miller's indexes. Reciprocal lattice.<br>2. week: Methods of structural analysis. Diffraction of X-ray radiation on crystals. Bragg's equation and Laue's condition, relation between them. Ewald's construction for different experimental techniques.  |   |

| <p>3. week: Mechanical properties of solids and perturbations in crystal lattice. Classification of solids according to nature of bonding among elements in crystal lattice. Basic types of bondings (ion, covalent, metal, Van der Waals, hydrogen)</p> <p>4. week: Thermal properties of solids – Einstein and Debye theory of specific heat. Electrical properties of solids.</p> <p>5. week: Sommerfeld's theory. Density of electronic states. Influence of temperature on the distribution of free electrons. Fermi – Dirac distribution function.</p> <p>6. week: Electron in periodic potential. Energy spectrum of electrons in crystal. Kronig – Penney's model. Effective mass of electron.</p> <p>7. week: Concept of holes. Semiconductors. Electrical conductivity of metals and semiconductors adopting properties of energy spectrum of electrons.</p> <p>8. week: Transport properties in metals and semiconductors – Hall effect, magnetoresistance, photoconductivity, contact phenomena, quantum Hall effect.</p> <p>9. week: Macroscopic quantum phenomena: Superconductivity and Superfluidity.</p> <p>10. week: Magnetic properties of solids – orbital and spin magnetic moment of atom. Definition of basic magnetic quantities (magnetization, polarization, susceptibility, permeability). Vector model of atom.</p> <p>11. Classification of magnetic materials according to nature of magnetic interactions. Diamagnetic and paramagnetic systems.</p> <p>12 week: Basic properties of ferromagnets. Magnetic hysteresis, coercitive field. Domain structure, physical reasons leading to the domain structure.</p> |       |       |      |     |     |   |   |   |   |   |    |       |       |       |      |     |     |

Last but not least, the important role of sports activities is to eliminate swimming illiteracy and by means of a special program of medical physical education to influence and mitigate unfitness.<br>In addition to these sports, the Institute offers for those who are interested winter and summer physical education trainings with an attractive program and organises various competitions, either at the premises of the faculty or University or competitions with national or international participation. |   |

| <b>Course level:</b> II.  |  |
| <b>Prerequisites:</b>   |  |
| <b>Conditions for course completion:</b><br>1. Active participation in seminars<br>2. Elaboration and presentation of PPT presentation on the assigned topic. Maximum number of points 20; minimum number of points 11.<br>3. Final test in the range of 20 questions from selected chapters and lectures. Maximum number of points 20; minimum number of points 11. The final evaluation (mark) is the sum of points for the presentation and the test. A 40b - 37b B 36b - 33b C 32b - 29b D 28b - 25b E 24b - 21b FX 20b - 0b<br>The evaluation of the course and its subsequent completion will be based on clearly and objectively set requirements, which will be set in advance and will not change. The aim of the assessment is to ensure an objective and fair mapping of the student's knowledge while adhering to all ethical and moral standards. There is no tolerance for students' fraudulent behavior, whether in the teaching process or in the assessment process.   |  |
| <b>Learning outcomes:</b><br>Provide students with basic information about a systemic approach to helping. Train interviewing, clarify orders. Reflect on help options.<br>The student is able to demonstrate an understanding of the theoretical principles of conducting a helping conversation.<br>The student is able to describe, explain and evaluate in what context to use which of the selected techniques to help the interview with the individual.<br>The student is able to use basic selected techniques when working with an individual in the interview process.<br>The method of teaching the subject will be oriented to the student. Lecturers will be interested in students' needs, expectations and opinions so as to encourage them to think critically by expressing respect and feedback on their opinions and needs.<br>The content of the curriculum will be based on primary and high-quality sources that will reflect the topicality of the topics so as to ensure the connection of the curriculum with other subjects and also the connection of the curriculum with practice. Students will be expected to take an active approach in lectures and seminars with an emphasis on their independence and responsibility. |  |
| <b>Brief outline of the course:</b>   |  |

|   |      |      |      |      |     |
|---|------|------|------|------|-----|
| Psychological preparation for conducting an interview. Self-reflection of one's own possibilities, abilities to lead a conversation, to help. Possibilities of helping with conversations from the point of view of selected psychological approaches. Systematic approach to helping. Interview and professional ways to help and control. Objectivist and constructivist framework of conversation in theory and practice. Is it possible to help with control? Opening the interview, negotiating the course, course, ending the interview. Constructivist questions in the interview. Analysis of individual phases of conducting the interview. Reflex team possibilities of help in conversation. Models of reflective teams. Model situations of conducting an interview with an individual. Model situations of conducting an interview with a group. Professional possibilities, advantages and pitfalls of solving problems with an individual, with a group. |      |      |      |      |     |

| <b>Learning outcomes:</b><br>The main goal of the subject is to get knowledge on the basic reasons of recent distribution of the animals on the Earth, zoogeographic regionalization of the Earth's surface and human influence on the faunal distribution in the history.  |                                  |
| <b>Brief outline of the course:</b><br>This course will review our current understanding of the patterns of animal distribution and the processes that influence distributions of species and their attributes. Zoogeography will integrate information on the historical and current ecology, genetics, and physiology of animals and their interaction with environmental processes (continental drift, climate) in regulating geographic distributions. The course will emphasize descriptive and analytical approaches useful in hypothesis testing in zoogeography and will illustrate applied aspects of zoogeography (e.g. refuge design in conservation). |                                  |
