## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> IK/ AUSG-V/13	<b>Course name:</b> Abdominal Ultrasonography
<b>Course type, scope and the method:</b> <b>Course type:</b> Seminar <b>Recommended course-load (hours):</b> <b>Per week: Per study period:</b> 6s <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 8.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> 1. For successful completion of the practical exercises/seminars is required: - To participate at all /100%/of practical exercises, theoretical and practical performance of all exercises/seminars. 2. For successful obtained of the credits from subject is necessary: - To gain the credit from practical exercises (paragraph 1 above). - Evaluation: Study rules of procedure UPJŠ in Košice, the Faculty of Medicine, Par II, Art13	
<b>Learning outcomes:</b> Acquaintance of students with individual work procedures in abdominal ultrasonography.	
<b>Brief outline of the course:</b> 1. Basic principles of ultrasonography, examination of organs of the abdominal cavity in the form of a seminar. 2. Practical demonstration of examination of the abdominal cavity, individual organs: liver, gallbladder, pancreas, kidneys, pelvic organs, aorta in healthy volunteers. Acquaintance with the basic operation of the sonographic device. Examination of patients by students, under the supervision of the teacher. 3. Examination of patients with the most common diagnoses, for example: congestive heart failure, liver diseases (steatosis, cirrhosis, etc.), gall bladder diseases - cholecystolithiasis, eventual tumors (according to patient availability) and other, most frequently occurring diseases of the abdominal cavity respectively. Examination of patients by students, under the supervision of the teacher.	
<b>Recommended literature:</b> C.F. Dietrich a kolektív: Ultrasonografie, Vydavateľstvo EQUILIBRIA 2008 Valočiková I.: Abdominálna ultrasonografia, Vysokoškolské učebné testy 2005	
<b>Course language:</b> slovak	
<b>Notes:</b> The course Internal Medicine 1 is provided only in the summer term. The minimum number of registered students for the given subject must be 10 or more.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> 1. KAIM/AL-V/18	<b>Course name:</b> Algesiology
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 0 / 1 <b>Per study period:</b> 0 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 9.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> UFR/FA-V1/19 and ChK/CH-V1/22	
<b>Conditions for course completion:</b> 1. 100% participation on the lectures 2. Test - minimum percentage of 60%	
<b>Learning outcomes:</b> Basic knowledge about the treatment of acute postoperative and post-traumatic pain, methods of obstetric analgesia. Basic knowledge about methods of the treatment of chronic cancer, paliative medicine and different types of chronic non-cancer pain, including noninvasive and invasive approaches – diagnostic and therapeutic procedures.	
<b>Brief outline of the course:</b> The concept of the field of algesiology. Pain management history. Basic differences between acute and chronic pain. Pathophysiology of acute pain. Treatment of acute pain. Pathophysiology of labor pain. Possibilities of obstetric analgesia. Pathophysiology of chronic cancer and non-cancer pain. Treatment of chronic cancer and non-cancer pain. Rational analgesic pharmacotherapy. Anesthesiological techniques in the treatment of acute and chronic pain. Basics of interventional algesiology. Palliative and hospice care.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> UA/A-V1/14	<b>Course name:</b> Anatomy 1
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 3 / 3 <b>Per study period:</b> 42 / 42 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 7	
<b>Recommended semester/trimester of the course:</b> 1.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> 1. 100% active presence in all practical lessons. If a student misses a practice (max. 3 times) for serious health or family reasons, he/she must be excused by his/her teacher and the substituting practice must be agreed by the teacher. It is not allowed to substitute a practice in the week before the practical test. 2. Online lectures are obligatory – 100% active presence is required. 3. Students must take part in all written and practical tests and achieve a minimum of 72 points (it means 60% of the 120 points) obtained as the sum of points from two (2) theoretical and two (2) practical tests. The result will be calculated according to the attached table. Students, who do not attend all practical and written tests in regular terms for serious reasons and students, who do not achieve a minimum of 72 points, will have only one (1) chance to retake the test during the exam period (from the curriculum of the entire semester!). 4. If a student does not obtain a minimum of 72 points from all theoretical and practical tests combined and he/she does not pass the retake test, he/she will be marked with an “Fx-failed” grade. 5. Students, who did not satisfy the conditions for successful completion of the subject, i.e. they were absent for more than three practical lessons; did not undertake practical or written exams, they will not be allowed to undertake the retake test and will be marked with an “X” mark – unclassified student. Table for evaluation of subject Anatomy 1: 93 - 100% 112 – 120 points completed „A“ – excellent 85 - 92% 102 – 111 points completed „B“ – very good 77 - 84% 92 – 101 points completed „C“ – good 69 - 76% 83 – 91 points completed „D“ – satisfactory 60 - 68% 72 – 82 points completed „E“ – sufficient do 59% 71 and less points not completed „Fx“ – failed	
<b>Learning outcomes:</b> The aim of this subject is to use anatomical nomenclature, to know the structure of upper and lower limbs, bones, their joints, muscles, vessels and nerves. Study of anatomical structures location in individual regions of upper and lower limbs in mutual topographical relationships with the ability to apply it in practical medicine. Knowledge gained from the study of both systemic and regional	

anatomy of upper and lower limbs should be used in application from the view of functional

**Brief outline of the course:**

Ethical principles in teaching of anatomy, introduction to anatomy. Knowledge of anatomical nomenclature and its using during the study of anatomy and also in practical medicine. Become familiar with general knowledge of bones (osteology), joints (syndesmology), muscles (myology) and vessels. Study of the skeleton, joints and muscles of upper and lower limbs. Study of the blood and lymphatic systems and upper and lower limbs innervation. Topographical dissection of individual regions of upper and lower limbs. Dissection and study of superficial and deep structures in individual regions of limbs, with emphasis on their practical application.

<b>Number of ECTS credits:</b> 11	
<b>Recommended semester/trimester of the course:</b> 2.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> UA/A-V1/22	
<b>Conditions for course completion:</b> In order to successfully complete the subject and obtain credits, it is necessary to: <ul style="list-style-type: none"> <li>- 75 % active presence in lectures (three absences without giving a reason are allowed).</li> <li>- 100% active mandatory participation in practical lessons. If student is not present in practical lesson (maximum 3 times) due to serious healthy or personal reasons, his/her absence must be excused by the teacher and compensation of the missing practical lesson completed at the Department of Anatomy within ongoing practical lessons/seminars of the other groups until the end of summer semester (SS). Compensation is not allowed one week before the practical test !</li> <li>- Theoretical and methodical mastery of practical tasks.</li> </ul> <b>Student:</b> <ul style="list-style-type: none"> <li>• is obliged to pass all ongoing theoretical (written) and practical tests – i.e. 3 theoretical and 3 practical tests (controls) – the total number of points he/she can achieve from theoretical tests is 120 and from practical tests 60</li> <li>• must achieve at least 60% success rate, i.e. 24 points from each theoretical test and 12 points from each practical test.</li> </ul> If the student does not achieve the minimum number of points from each part of the thematic unit, he/she is entitled one retake test at the beginning of the SS examination period and one retake test at the end of the SS examination period, i.e. 2 retake tests The student will take the retake test only from that part of the thematic unit in which he/she did not achieve the minimum number of points (24 from the theoretical test and 12 from the practical test) If the student does not take part in the theoretical and practical tests for any reason (personal, family, health), he/she will not have an alternative date, but will take the given exam on the first or second retake tests If the student does not take part in the first or second retake tests for any reason, he/she is not entitled to a replacement date <b>Other conditions:</b> <ul style="list-style-type: none"> <li>- Student who does not justify his/her non-participation in writing tests in accordance with the established rules, does not achieve at least 60% of the written and practical tests and does not succeed even in the retaken term, will automatically be graded X - "unclassified".</li> </ul>	

- Continuous control tests are evaluated based on the number of points achieved (%) with evaluation according to the Study Regulations of the UPJŠ in Košice, Faculty of Medicine, II. part, Art. 13, paragraph 4.

- Student who fulfilled conditions mentioned above and “prerequisite for completion the subject Anatomy 2”,

<https://www.upjs.sk/app/uploads/sites/9/2023/03/GM1-requirements-new-Anatomy-1.pdf>

is allowed to register for the final exam.

- Final exam: evaluation according to the table attached "A to E"

- The final assessment takes into account the results of the interim assessment

Evaluation of the final exam:

100 – 91 /A/ excellent

90 – 84 /B/ very good

83 – 75 /C/ good

74 – 68 /D/ satisfactory

67 – 60 /E/ sufficient

59 and below /FX/ fail

### **Learning outcomes:**

Study of anatomical structures of the retroperitoneal space and lesser pelvis including the urinary system, male and female genital organs in mutual topographical relationships. Detailed study of skull, joints, and muscles of the head and neck. Become familiar with the blood supply, venous and lymphatic drainage of the head and neck. Detailed study of cranial nerves, their topography, branches, and function. Become familiar with other nerves of the head and neck (cervical plexus, sympathetic trunk). The need of knowledge all areas of the head and neck and their relationships. Understanding of individual parts of the central nervous system (CNS), study of external and internal features of the brain, its function as a control center for all systems of human body. Acquiring knowledge about the blood supply, venous drainage, coverings, and ventricles of the brain. Anatomical description and function of the eye, ear, skin, and endocrine glands complete the information needed for students. Knowledge obtained are important for functional anatomy and neuroanatomy to acquire an overview of the human body and interrelationships between various anatomical systems.

### **Brief outline of the course:**

Neurovascular structures of the retroperitoneal space and lesser pelvis including the organs of urinary and genital systems. Skull – neurocranium and splanchnocranium. Cavities and spaces of the skull. Muscles of the head and neck. Blood supply, venous, and lymphatic drainage of the head and neck. Cranial nerves, innervation and topography of the head and neck. CNS – spinal cord, brain stem, cerebellum, diencephalon. Functional regions of telencephalon, rhinencephalon, limbic system, basal ganglia and their connections, nerve pathways. Ventricles, coverings, blood supply a venous drainage of CNS. Ear, Eye, including nerve tracts. Skin. Endocrine glands.

<b>Learning outcomes:</b> Study of structures of the thoracic wall, abdomen and pelvis. Study of the anatomical structures of these areas in mutual relationships and the study of individual organs in the thoracic, abdominal and pelvic cavities located. To know the mutual regional relationships of individual anatomical structures, projection and skeletotopy of the organs located in the thorax, abdomen and pelvis. The acquired knowledge should be used in terms of spatial arrangement in the individual parts of the	

body and usable also in terms of functional anatomy in practical medicine.						
<b>Brief outline of the course:</b> Study of structures of the thoracic wall, organs located in the thoracic cavity, their projection on the thoracic wall. Topographical dissection of individual parts of mediastinum. Study of the vertebral column, abdominal wall and pelvis. Study of abdominal and pelvic organs, their projection, topography and skeletotopy. Abdominal wall dissection, study of weakest abdominal and pelvic walls spots (possibility of hernia occurrence).

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> UA/A-V3/17	<b>Course name:</b> Anatomy 3
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 3 / 3 <b>Per study period:</b> 42 / 42 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 8	
<b>Recommended semester/trimester of the course:</b> 3.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> UA/A-V2/14 and UA/A-V1/14	
<b>Conditions for course completion:</b> In order to successfully complete the subject and obtain credits, students have to keep following conditions: - 75% active presence in lectures (three absences without giving a reason are allowed). - 100% active mandatory participation in practical lessons. If student is not present in practical lesson (maximum 3 times) due to serious healthy or personal reasons, his/her absence must be excused by the teacher and compensation of the missing practical lesson completed at the Department of Anatomy within ongoing practical lessons/seminars of the other groups until the end of winter semester. Compensation is not allowed one week before the practical test (so-called repetition week) ! - Theoretical and methodical mastery of practical tasks. The student: <ul style="list-style-type: none"> <li>• is obliged to pass all ongoing theoretical (written) and practical tests</li> <li>• during the semester must take part in 2 theoretical and 2 practical tests (controls), i.e. the total number of points he/she can achieve from theoretical tests is 80 and from practical tests 40</li> <li>• must achieve at least 60% success rate, i.e. 24 points from each theoretical test and 12 points from each practical test.</li> </ul> If the student does not achieve the minimum number of points from each part of the thematic unit, he is entitled to take one retake test at the beginning of the WS examination period and one retake test during the WS examination period, i.e. 2 retake tests The student will take the retake test only from that part of the thematic unit in which he/she did not achieve the minimum number of points (24 from the theoretical test and 12 from the practical test) If the student does not take part in the theoretical and practical tests for any reason (personal, family, health), he will not have an alternative date, but will take the given exam on the first or second retake tests If the student does not take part in the first or second retake tests for any reason, he/she is not entitled to a replacement date Other conditions: <ul style="list-style-type: none"> <li>- The student who does not justify his/her non-participation in tests in accordance with the established rules, does not achieve at least 60% of the written and practical tests (individually) and does not succeed even in the retaken term, will automatically be graded X - "unclassified".</li> </ul>	

- Continuous control tests are evaluated based on the number of points achieved (%) with evaluation according to the Study Regulations of the UPJŠ in Košice, Faculty of Medicine, II. part, Art. 13, paragraph 4.

- The student who fulfilled conditions is allowed to register for the final exam

- Final exam: evaluation according to the table attached "A to E"

Evaluation of the final exam:

100 – 91 /A/ excellent

90 – 84 /B/ very good

83 – 75 /C/ good

74 – 68 /D/ satisfactory

67 – 60 /E/ sufficient

59 and below /FX/ fail

### **Learning outcomes:**

Study of anatomical structures of the head and neck in mutual topographical relationships. detailed study of skull, muscles and fascias of head and neck. Become familiar with arterial blood supply, venous and lymphatic drainage of head and neck. Detailed study of 12 pairs of cranial nerves, their topography, branches and function. Also become familiar with other nerves of the head and neck (cervical plexus, sympathetic trunk). Students have to know all regions of the head and neck, with structures and their relationships. Understanding of individual parts of the CNS, study of external and internal features of the CNS, the CNS function as a control center for all systems of human body. Acquiring knowledge about the blood supply and venous drainage of the brain. Knowledge to apply also in terms of functional neuroanatomy to acquire an overall view of the human body and interrelationships between various systems.

### **Brief outline of the course:**

Skull – neurocranium and splanchnocranium. Muscles of the head and neck. Blood supply, venous and lymphatic drainage of the head and neck. Cranial nerves, innervation and topography of the head and neck. CNS: spinal cord, brain stem, cerebellum, diencephalon. Functional regions of telencephalon, limbic system, basal ganglia and their connections, nerve pathways. Overview of the human body from anatomical and functional points of view. Ear and Eye.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> UA/AP-V1/14	<b>Course name:</b> Anatomy Dissection 1
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 0 / 2 <b>Per study period:</b> 0 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 5.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> (UA/A-V3/17 or UA/A-GM2/22)	
<b>Conditions for course completion:</b> For successful obtained of the credits from subject is necessary: <ol style="list-style-type: none"> <li>1. 100% of active presence at practical lessons</li> <li>2. Active exploration and dissection of the human body by the student</li> <li>3. Students are allowed to be absent for a maximum of 3 practical lessons per semester.</li> <li>4. The final oral presentation of individual work - autopsy</li> </ol>	
<b>Learning outcomes:</b> Students have the opportunity to deepen their knowledge of anatomy by performing anatomical dissection under the supervision of the teacher and preparing material for teaching medical students in the lower grades of medical school. Students improve their practical skill to work with tweezers and a scalpel, which will be helpful to them in their own medical practice.	
<b>Brief outline of the course:</b> Dissection of subcutaneous structures on the palmar and dorsal side of upper limb, dissection of axillary fossa, dissection of subfascial layer in anterior region of arm and forearm, cubital fossa, anterior region of wrist, palm of hand, scapular region, posterior region of arm and forearm, posterior region of wrist and dorsum of hand.	
<b>Recommended literature:</b> Rohen, Yokochi: Color Atlas of Anatomy, Lippincott Williams & Wilkins, 2011 Netter F. H.: Atlas of Human Anatomy.	
<b>Course language:</b> English

<b>Course ID:</b> KMSM Šaca/ASM-VL/16	<b>Course name:</b> Artroskopia a športová medicína
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 0 / 2 <b>Per study period:</b> 0 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> 100% participation in practical exercises (seminars/operating room)	
<b>Learning outcomes:</b> Getting to know the basic principles of sports medicine and arthroscopy and most common sports injuries. Students become familiar with anatomy, biomechanics, injury mechanism, diagnostics, therapy, post-operative care and rehabilitation with each particular topic. We will emphasize the criteria for returning to sports after injuries and surgery of the musculoskeletal system. The course is intended for everyone who is interested in orthopedics, traumatology and rehabilitation and want to learn new information from the topic of sports medicine. In addition, students will have the opportunity to gain practical experience by participating in arthroscopic surgery.	
<b>Brief outline of the course:</b> <ol style="list-style-type: none"> <li>1. Basic principles of sports medicine</li> <li>2. Epidemiology, risk factors, prevention of sports injuries</li> <li>3. Basics of arthroscopy</li> <li>4. Muscle and tendon injuries</li> <li>5. ## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> USBM/ BHM-V/16	<b>Course name:</b> Behavioral Medicine
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 / 1 <b>Per study period:</b> 14 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 4.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> Individual work, course assignment during the semester, presentation of the assignment results before the end of the semester, compulsory participation at practices, final test.	
<b>Learning outcomes:</b> To provide an insight into basic biobehavioural determinants of health and disease. Students will get an overview of modifiable social, psychological, and environmental factors that affect health behaviour, functional status and quality of life. Become acquainted with the methodology of measuring these factors. Obtain information on intervention programmes in the prevention of chronic diseases, health promotion, and chronic disease self-management. To learn the basic principles of the transfer of scientific knowledge into healthcare practice and policy, especially within the context of patient-centered, multidisciplinary, and integrated care.	
<b>Brief outline of the course:</b> The continuum of health and illness. Biopsychosocial determinants of health. Quality of life and chronic disease. Chronic condition management and health behaviour. Psychoneuroimmunology. Stress, coping and health. Health-enhancing and health-damaging psychosocial factors. Adjustment to disease. Possibilities of measuring modifiable psychological, social and environmental factors affecting health-related behaviour and quality of life; patient-reported outcomes. Treatment adherence, compliance, self-management support. Non-pharmacological interventions, cognitivebehaviour therapy. Digital health interventions. Evidence-based behavioural medicine. Transfer of behavioural medicine knowledge into healthcare practice and policy.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ULBL/ BL-V1/09	<b>Course name:</b> Biology 1
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 2 <b>Per study period:</b> 28 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 4	
<b>Recommended semester/trimester of the course:</b> 1.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> For the successful completion of the subject, as "prerequisite for registration" in the follow-up subject Biology 2, it is necessary: 100% active participation in all practical lessons For successful completion of the subject, as "prerequisite for completion of the subject" Biology 2, it is necessary: obtaining at least 60% from each test	
<b>Learning outcomes:</b> To introduce the basic concepts of cell biology and molecular biology, including cell structure, biomacromolecules, cell cycle, cell reproduction, gene expression and cell communications. To give students a thorough grounding in the theoretical and practical foundations of molecular biology and cytology. Students have acquired an understanding of the major concepts in cell and molecular biology and have obtained basic information related to cytogenetics in clinical practice.	
<b>Brief outline of the course:</b> Biomacromolecules – the fundamental components of biological macromolecules, common characteristics, the structure and function of saccharides, lipids, proteins and nucleic acids. Cell structure – prokaryotic and eukaryotic cells, cell organelles, their structure and function. General characteristic of biomembranes, molecular structure of biomembranes; movement of molecules through the membrane. The structural organization of genome - organization of DNA in genomes, the basic principles of human cytogenetics. Replication of DNA. Cell cycle – phases, control of cell cycle, mitosis, meiosis, spermatogenesis, oogenesis. Cell signalling. Gene expression – gene structure and function, transcription, post-transcriptional RNA processing, translation, synthesis of proteins, posttranslation modifications, regulation of gene expression. The basic principles of epigenetics. Cell differentiation, cell ageing and cell death. Genomics and medicine.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ULBL/ BL-V2/22	<b>Course name:</b> Biology 2
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 3 <b>Per study period:</b> 28 / 42 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 6	
<b>Recommended semester/trimester of the course:</b> 2.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ULBL/BL-V1/09	
<b>Conditions for course completion:</b> All practical lessons (100%) are obligatory for all students. Assessment of the student's learning achievements is carried out as a combination of continuous monitoring of the study during the teaching part of the semester (40%) with the final examination for the period of the semester concerned (60%). Prerequisite for the final examination (to register for the final examination) is the acquirement of 20 points minimum from continuous assessments during the semester.	
<b>Learning outcomes:</b> To introduce the basic concepts of general biology and human genetics, including mutations and their role in pathogenesis in human diseases, Mendelian genetics, quantitative and population genetics. To give students a thorough grounding in the theoretical and practical foundations of basic genetics. Students have acquired an understanding of the major concepts in human and molecular genetics and have obtained basic information related to genetic and molecular biology methods in clinical practice.	
<b>Brief outline of the course:</b> Mutations I. - classification of mutations, mechanisms of mutagenesis, gene (point) mutations, structural and numerical chromosome mutations. Mendelian genetics - historical overview, general characteristics, Mendel's laws of inheritance. Quantitative genetics - polygenic inheritance, heritability, multifactorial diseases. Gene linkage. Heredity and sex. Genetics in pathogenesis of human diseases. Inheritance of blood group systems I. - ABO, Rh, MNss, Lewis, .... HLA system. Population genetics - Hardy-Weinberg law, population equilibrium, panmixis, inbreeding, genetic drift, eugenics, euphenics. Genealogy and genetic counselling. Genetics of cancer. Molecular biology methods in human genetics and clinical practice. Ethical issues in human genetics.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ULCHBKB/BCHM-V/10	<b>Course name:</b> Bioorganic Chemistry in Medicine
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 / 1 <b>Per study period:</b> 14 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 2.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> seminars, lectures; more details: <a href="https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/">https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/</a>	
<b>Learning outcomes:</b> The graduate knows the structures and functions of selected organic and bioorganic molecules that participate in chemical processes taking place in living systems, which leads to a better understanding of the functions of the whole organism. Bioorganic chemistry is the chemical basis for mastering and properly understanding medical biochemistry, which is its superstructure and also forms the theoretical basis of several medical disciplines.	
<b>Brief outline of the course:</b> Organic compounds (e.g. hydrocarbon derivatives, carboxylic acids. Structure and biochemically significant reactions of organic compounds. Heterocyclic compounds. Saccharides. Lipids and steroids. Nucleic acids. Amino acids and peptides. Proteins - structure and function. Natural substances - e.g. vitamins, alkaloids. More details: <a href="https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/">https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/</a>

<b>Course ID:</b> ULI/B-V/09	<b>Course name:</b> Biostatistics
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 0 / 2 <b>Per study period:</b> 0 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 4., 6., 8., 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ULI/LI-V/22	
<b>Conditions for course completion:</b> 1. 100% and active attendance. 2. Min. 60% from each test during the term. 3. Elaboration of all assigned tasks.	
<b>Learning outcomes:</b> The student will acquire basic knowledge of statistical terminology, mainly methods of collecting, sorting and processing statistical data. He will be able to use standard application software and acquire practical skills in data processing. Student will be able to correctly apply selected statistical methods and interpret the results of experimental medical data processing.	
<b>Brief outline of the course:</b> Basic terms, experiment, survey, statistical set, statistical unit. Descriptive statistics, measures of location, variability and shape. Data grouping methods. Theoretical models of probability distribution. Statistical estimation. General theory of statistical hypothesis testing. Outlier tests. Parametric and non-parametric tests. Hypothesis tests about the mean value, hypothesis tests about the variance. Analysis of variance of simple sorting. Regression and correlation analysis. Tightness measures of statistical dependence. Examples of incorrect conclusions when interpreting the results. Solving sample tasks using available software.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ChK/ KVCH-V/12	<b>Course name:</b> Cardiovascular Surgery
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 / 1 <b>Per study period:</b> 14 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ChK/CHP-V/15	
<b>Conditions for course completion:</b> I. The following are required for successful completion of the practical exercises: - Compulsory attendance at practical exercises / lectures - Completion of assigned tasks II. To successfully complete the course and obtain credits, the following is required: - Successful completion of practical exercises - Control tests are evaluated on the basis of the achieved number of points (%) with evaluation according to the Study Regulations of the UPJŠ v Košice, Faculty of Medicine, Part II, Article 13, paragraph 4 - The final evaluation takes into account the results of the interim evaluation and the student's activities during the semester Alternatively, the teaching may be carried out in a distance form. Teachers will communicate with students via e-mail, MS Teams, or other teleconferencing application, and may assign students tasks in the form of preparing reports on a given topic and solving sample case studies. Assessments of the assignments will be carried out by individual teachers. The assessment of knowledge will be carried out remotely - in the form of a test or oral answer. Completion of the course will be evaluated on the basis of attendance, written assignments and test results.	
<b>Learning outcomes:</b> To familiarize the students of UPJŠ Faculty of Medicine with cardiovascular diseases and their treatment (endovascular and surgical). To point out the causes, peculiarities of cardiovascular diseases and their prevention. To teach the basic principles of cardiovascular surgery and management of the cardiovascular patient.	
<b>Brief outline of the course:</b> Basic principles of cardiac and vascular surgery, endovascular procedures, principles of rehabilitation and dietetics.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> IK/ OPIM-V/22	<b>Course name:</b> Clerkship - Internal Medicine
<b>Course type, scope and the method:</b> <b>Course type:</b> Practice <b>Recommended course-load (hours):</b> <b>Per week: Per study period:</b> 120s <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 4	
<b>Recommended semester/trimester of the course:</b> 8.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> IK/IM-V1/16	
<b>Conditions for course completion:</b> 1. For successful obtained of the credits from subject is necessary: - successful completion of professional practice - complete the evaluation of Clerkship of Internal Medicine	
<b>Learning outcomes:</b> Get acquainted with and master the work in the department under the guidance of a practice assistant	
<b>Brief outline of the course:</b> All medical students are required to undertake the clinical internship in the hospital wards under the supervision of the clinical tutor or other clinician who is responsible for the internship. The students make the ward rounds daily, they make daily medical notes, write case histories of newly admitted patients, read and assess X-rays, ECGs and other laboratory findings with their supervisor and at the same time they acquaint themselves with other medical records and work in the hospital ward. Practical clinical work (under tutorial guidance nad support) includes taking various biological samples for laboratory testing, administration of subcutaneous, intramuscular, intravenous injections and transfusions. The students take responsible part in therapeutic procedures and physical examinations such as pleural, abdominal and sternal punction in monitored patients (or in other cases interesting from the diagnostic view), USG, X-ray, ECG, bicycle ergometry, pulmonary function examination, endoscopy, and autopsy in the case of death. According to hospital possibilities the clinical internship requires 1-2 days of laboratory work to perform in order to become familiar with available basic diagnostic techniques such as doing urine tests, blood counts and blood smears. In more common internal diseases sternal biopsies are demonstrated to students. According to hospital possibilities, the students are required to become familiar with the work of Central Admission Department, Intesive Care Unit, Dialysis Unit and Anaesthesiology and Resuscitation Department. The students are required to take part in seminars. If it is possible they are supposed to perform night duties with qualified medical staff at least twice during their internship course. The students are required to write an internship diary with the records of all the performed procedures during their internship. The diary will be regularly checked by the clinical tutor at the end of each week.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> KDaD/ OPPed-V/22	<b>Course name:</b> Clerkship - Paediatrics
<b>Course type, scope and the method:</b> <b>Course type:</b> Practice <b>Recommended course-load (hours):</b> <b>Per week: Per study period:</b> 40s <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> KDaD/PE-V1/15	
<b>Conditions for course completion:</b> Successful completion of practice in pediatrics Submission of evaluation of clinical practice Evaluation during course (test, individual work): individual work under guidance of tutor Final evaluation (exam): Final evaluation of internship – awarding credits	
<b>Learning outcomes:</b> Learn to work in the children's department under the guidance of a responsible worker.	
<b>Brief outline of the course:</b> A student participates at work at the department under the supervision of a tutor. He/she improves his/her skills in examining children and assessing the clinical conditions and participates in the diagnostic and therapeutic process of newly admitted patients. List of clinical procedures, which are necessary to be completed by the student under the supervision of a tutor: <ul style="list-style-type: none"> <li>• Initial clinical examination, writing an admission report</li> <li>• Morning rounds with the head of a ward</li> <li>• Discharge of patients – writing an discharge report</li> <li>• Assistance during (abdominal) USG investigation</li> <li>• Assistance during collection of biologic material and insertion of intravenous cannulas</li> </ul>

<b>Course ID:</b> ChK/ OPCH-V/16	<b>Course name:</b> Clerkship - Surgery
<b>Course type, scope and the method:</b> <b>Course type:</b> Practice <b>Recommended course-load (hours):</b> <b>Per week: Per study period:</b> 80s <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ChK/CH-V3/17	
<b>Conditions for course completion:</b> 1. For successful completion of the practical exercises / lectures is required: successful completion of clerkship in surgery submit the evaluation of completion of clerkship in surgery	
<b>Learning outcomes:</b> The students will have the practical knowledge and skills in the investigation and treatment the patients in the ambulance, department of surgery and in the operating rooms. The students will learn the ethical principles of healthcare delivery. The students will increase the ability to communicate effectively with the patient on the surgical ambulance and bedside department.	
<b>Brief outline of the course:</b> To work in surgical ambulance in daytime and emergency service. The activity of outpatient clinics. Patient management. Examination and collection of material for examination. Interpretation of laboratory and imaging examinations. Assistance during surgical operations in the operating rooms.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ULCHBKB/KB-V/20	<b>Course name:</b> Clinical Biochemistry
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 2 <b>Per study period:</b> 28 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ULCHBKB/LBC-V2/20 and UPF/PF-V2/16	
<b>Conditions for course completion:</b> lectures, seminars; more details: <a href="https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/">https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/</a>	
<b>Learning outcomes:</b> The graduates should understand and be able to explain the principal pathobiochemical mechanisms of selected diseases, understand the relationships between metabolism and the results of laboratory tests and be familiar with routine clinical-biochemical tests. The students will learn on typical case reports, respectively the results of tests of model patients, how to select appropriate laboratory tests and use clinical-biochemical diagnostic algorithms. Correct and targeted indication of laboratory tests related to the expected diagnosis and proper interpretation of test results is an important part of the daily work of a physician.	
<b>Brief outline of the course:</b> Introduction to clinical biochemistry. Water and mineral homeostasis (e.g. regulation of osmolality). Acid-base balance disorders. Renal function. Liver function. Biochemistry background of diabetes mellitus. Cardiac markers. Calcium-phosphate and magnesium balance. Biochemical tests in endocrinology. Laboratory markers of malignant diseases. Disorders of iron metabolism. Biochemistry of extreme age. ## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ULBF/ KBF-V/09	<b>Course name:</b> Clinical Biophysics
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 0 / 1 <b>Per study period:</b> 0 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 9.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ULBF/LBF-V/22	
<b>Conditions for course completion:</b> - The minimum number of students is 5 students. - written tests, exam	
<b>Learning outcomes:</b> Clinical biophysics comprises the scientific and technological basis of clinical techniques and procedures that are based on physics. Most direct diagnostic tests and many of the therapeutic procedures use the effects of physical forces, ionizing and non-ionizing radiation on human body. Clinical biophysics implies that an understanding of the function, as well as an appreciation of the scope and limitations of the equipment used in diagnosis or therapy, are absolutely necessary for good medical practise.	
<b>Brief outline of the course:</b> Lasers in medicine, Physical basics of lasers, types of lasers used in medicine, safety aspects of the use lasers, Clinical application of lasers in ophthalmology, diabetic retinopathy - panretinal photocoagulation, glaucoma – iridotomy, capsulotomy, correction of refractive properties of the eye, laser surgery observation, Physiotherapy in rehabilitation, Physical and biophysical basics of galvanic current, diathermy and diadynamic current, magnetotherapy and ultrasound in physiotherapy of vertebral diseases, Observation of practical application of physiotherapy, Nuclear magnetic resonance tomography, Physical basics of nuclear magnetic resonance, magnetic properties of nuclei, Larmor equation, resonance and relaxation, relaxation times, Basic principles of imaging, spatial encoding of signal, possible hazards of NMR imaging, Clinical application of magnetic resonance (MR), equipment in local hospital, modelling of the examination of patient, images of tissues with disorders, advantages and disadvantages MR compared to CT, Observation of the examination of patient.

<b>Learning outcomes:</b> To provide students with basic knowledge and understanding of the use of knowledge of basic immunology in the medical and preventive care of patients with immunologically mediated diseases. After completing the course, students will be able to use the acquired theoretical concepts, distinguish between basic theories and concepts that they use. Students will be able to evaluate and use the acquired knowledge in further study and at the same time will be able to apply the acquired theoretical knowledge in practice.	
<b>Brief outline of the course:</b> Beginning with the basic concepts: development of immune system, allergy and anaphylaxis, immunodeficiency, autoimmunity. Detailing: characterization, clinical presentation, diagnosis and differential diagnosis of immune-based diseases. Deals with indications, contraindications and side effects of immunomodulatory therapy. The current timetable for a given semester is published on the website of the Department of Paediatrics and Adolescent Medicine.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ULI/ PB-V/17	<b>Course name:</b> Computer Biometrics
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 0 / 1 <b>Per study period:</b> 0 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 3.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ULI/LI-V/22	
<b>Conditions for course completion:</b> 1. 100% and active attendance. 2. Min. 60% from each test during the term. 3. Elaboration of all assigned tasks. 4. Final exam.	
<b>Learning outcomes:</b> This subject should provide an understanding of the basic principles that underlie research design, data analysis and interpretation of results and enable the students to carry out a wide range of statistical analyses.	
<b>Brief outline of the course:</b> Basic notion. General sequence of steps in a research project. The design of experiment. Descriptive statistics - mean, standard deviation, variance, standard error of the mean, quartils, confidence intervals. The distribution of observations. Theoretical models of distribution probability. Data protection in information systems. Estimation and hypothesis testing. Data collection, data entry, data checking, data cleaning, data analysis. The two-sample test for equal means, paired and not-paired. Homogeneity of variance in the two samples means test. Analysis of variance one way, parametric. Non-parametric tests. Solution of tasks with using commercialy software. Regression and correlation. Relation between two continuous variables. Simple linear regression and correlation. Correlation coefficient. Point and interval estimates for parameters of line. Testing hypothesis of probability. Contingency tables. Uncertainty models and their applications in medicine. Solution of typical tasks.

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> SK/S-V/12	<b>Course name:</b> Dentistry
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 / 1 <b>Per study period:</b> 14 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 7.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> UPF/PF-V1/16 and ULM/MB-V1/09 and UP/PA-V1/22	
<b>Conditions for course completion:</b> Completion of 100% participation in practical exercises and lectures. Continuous review with a record of assessment during clinical teaching. Passing a test from lectures with a minimum rating of 60%. Final test with a grade of at least 60%. The interim assessment for each subject will be registered in AIS. During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%.	
<b>Learning outcomes:</b> Point out the relationship between oral health and the overall health of the patient. To clarify the importance of oral organisms and their influence on focal infection of dentogenic origin.	
<b>Brief outline of the course:</b> Examination of the oral cavity, hygiene of the oral cavity, cariology, diseases of the dental pulp, periodontal diseases. Negative effect of untreated diseases of hard dental tissues, pulp and periodontium on the overall health of the patient. Surgical procedures in oral cavity, possibilities of local anesthesia, indications, contraindications and side effect of local anesthesia. Peculiarities in the treatment of children and elderly patients. Orthodontic treatment. The manifestation of various systemic diseases in oral cavity. Odontogenic infections, their symptoms, treatment and complications. Orofacial oncology. Salivary gland diseases. The cooperation between dentists and other medical specializations. Preventive dentistry.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> KD/D-V/22	<b>Course name:</b> Dermatovenerology
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 2 <b>Per study period:</b> 28 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 5	
<b>Recommended semester/trimester of the course:</b> 8.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ULM/MB-V1/09 and UPF/PF-V1/16 and UP/PA-V1/22	
<b>Conditions for course completion:</b> 100% attendance at practical exercises (in the case of excused absence practice, student may substitute up to 2 exercises). Successfully pass the tests to get at least 60% of total score. Compulsary attendance in at least 7 lectures.	
<b>Learning outcomes:</b> The student of the subject Dermatovenerology will acquire theoretical and practical knowledge in the field of etiopathogenesis, diagnosis, differential diagnosis, treatment and prevention of the skin diseases and sexually transmitted diseases in children and adults. The student will have the skills to diagnose and treat drug, food and contact allergies. The student is able to evaluate and use the acquired knowledge during further study and at the same time apply theoretical knowledge in practice.	
<b>Brief outline of the course:</b> General dermatology, morphology, terminology. Basic investigation in dermatology (investigation methods). Bacterial, viral and fungal infections of the skin and mucous membranes - differential diagnosis. Psoriasis and erythematous diseases. Eczema – endogenous, exogenous, diagnosis, therapy. Drug allergy, food allergy. Facial dermatoses. Bullous dermatoses. Autoimmune connective tissue diseases. Hair and nail diseases. Chronic venous insufficiency. Differential diagnosis of leg ulcers. Pediatric dermatovenerology. Non-melanoma skin cancer and malignant melanoma. Venereal diseases. STD. Basics of pharmacotherapy in dermatovenerology.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> CJP/ LFAJV/09	<b>Course name:</b> English Language for General Medicine
<b>Course type, scope and the method:</b> <b>Course type:</b> Practice <b>Recommended course-load (hours):</b> <b>Per week: 2 Per study period: 28</b> <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 2.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> Active classroom participation (2x90 min. absence tolerated), LMS Moodle - practice tests, 2 continuous assessment tests, oral presentation. Students must obtain 60% in continuous assessment to be eligible for the final exam registration. Exam - final exam test Final evaluation = continuous assessment results - 50% , final exam test result - 50%. Grading scale: A 93-100 %, B 85-92 %, C 77-84 %, D 69-76 %, E 60-68 %, FX 59% and less.	
<b>Learning outcomes:</b> The development of students' language skills - reading, writing, listening, speaking, improvement of their linguistic competence - students acquire knowledge of selected phonological, lexical and syntactic aspects, development of pragmatic competence - students can effectively use the language for a given purpose, with focus on English for specific/professional purposes - General Medicine, level B2.	
<b>Brief outline of the course:</b> Phonetic-phonological aspects of medical English. Highlights from the history of medicine. Human body, human anatomy. Health and illness, ailments, diseases - their symptoms, treatment, prevention. Hospital - wards, hospital staff. Medical specialties. Patient's examination, doctor-patient communication. Functional grammar - defining, classifying, expressing opinion, expressing function/role. Presentation skills - sign-posting language, structure of presentation, discussion participation, etc.

<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ULI/LI-V/22	
<b>Conditions for course completion:</b> 1. 100% and active attendance. 2. Min. 60% from each test during the term. 3. Elaboration of all assigned tasks.	
<b>Learning outcomes:</b> Understand basic principles of Evidence based Medicine (EBM). The students will get skills to obtain information about clinical scientific outputs; they will know how to critically evaluate clinical information as well as they will know to present benefits for clinical praxis. Basics of scientific work related to the medicine will be also explained.	
<b>Brief outline of the course:</b> The history, the development and the recent state on Evidence Based Medicine. Characteristics of clinical trials. Formulation of clinical questions. Specialized information resources for evidence based medicine. Methodology of clinical information searching. Qualitative evaluation of clinical studies and reviews. Presentation of practical works.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> USL/ SLK-V/16	<b>Course name:</b> Forensic Criminalistics
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 / 1 <b>Per study period:</b> 14 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 8., 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> Attendance on lectures and seminars to the specified extent, successful presentation of seminar work.	
<b>Learning outcomes:</b> Criminalistics is one of the important components of medical and legal science that provides knowledge and skill for analysis and assessment of criminal offenses – from committing a crime to punishing the offender. The teaching of the subject Forensic Criminalistics is focused on selected procedures and methods of forensic investigation, which are in many aspects built on the basic knowledge of the human body and chemical processes associated with the study of general medicine. The course also offers a demonstration and analysis of real criminal cases, which can be an interesting addition to content of studies not only for the future forensic doctors.	
<b>Brief outline of the course:</b> Introduction to forensic sciences. Areas of forensic science. History of forensic sciences. Forensic science organization in Slovakia. Expert activities. The position and tasks of forensic doctor, police investigator, and police technician in the investigation of a crime. Crime scene investigation. Types of evidence. Collection of evidence at the crime scene. Bloodstain patterns. Forensic identification. Techniques and procedures in postmortem identification. Dactyloscopy. Forensic biology and genetics. Portrait identification. Forensic odorology. Trasology. Firearms and toolmarks. Criminalistic tactics. Interviewing, questioning, and interrogation. Crime reconstruction. Criminology. Different schools of criminology. Areas of focus of criminologist. Victimology. Forensic psychology. Sanity evaluations and criminal responsibility. Contagiousness of evil. Serial and mass murderer.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> USL/ SLMP-V/22	<b>Course name:</b> Forensic Medicine and Medical Law
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 / 2 <b>Per study period:</b> 14 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 3	
<b>Recommended semester/trimester of the course:</b> 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ChK/CH-V3/17 and IK/IM-V3/22 and NLK/NL-V2/22	
<b>Conditions for course completion:</b> Attendance on lectures and seminars to the specified extent, successful completion of a credit test and oral exam.	
<b>Learning outcomes:</b> The aim of the subject is to acquaint students with the role of Forensic Medicine, as one of the main branches of medicine. The students will learn how to identify and assess the effects of violence on the human body, determine the cause of death in cases of non-violent and violent death, as well as apply medical knowledge to questions of civil and criminal law. Emphasis is placed on acquiring the basic knowledge necessary to perform an examination of the dead body at the scene of death, as a knowledge required of every future doctor.	
<b>Brief outline of the course:</b> Introduction to forensic medicine. History of forensic medicine. Role and concept of forensic medicine in Slovakia. Health Care Surveillance Authority. Medico-Legal and Pathological-Anatomical Departments of HCSA. Forensic medicine and legal authorities. Expert activity in relation to Criminal Law. Act No. 576/2004 Coll. on health care – procedures to be followed in case of death. Act No. 581/2004 Coll. on health insurance companies, healthcare supervision – examination of the dead body, autopsy. Types of autopsies. Autopsy procedure. Collection of biological material during the autopsy. Imaging methods in forensic medicine. Neonatal autopsy. Medicolegal death investigation. Estimation of the time of death. Postmortem changes. Supravital and vital reactions. Manner of death. Identification of the living and the dead. Forensic dentistry. Identity of decomposed or skeletalised remains. Identification in mass disasters. Exhumation. Visit to the autopsy room – documentation required for the autopsy, autopsy diagnosis, autopsy report. Natural (non-violent) death in adults. Natural (non-violent) death in children. Sudden infant death syndrome. Violent death in children. Child abuse and neglect. Killing of a newborn baby by the mother. Pregnancy and childbirth. Sexual offenses. Violent death. Mechanical injuries. Examination of wounds. Blunt and sharp force injuries. Regional injuries. Craniocerebral trauma. Firearm and blast injuries. Forensic investigation of traffic accidents. Suffocation. Mechanical asphyxia. Drowning. Thermal injuries. Electrical injuries. Diving accidents (barotrauma, decompression sickness). High altitude illness. Ionizing radiation injury and illness. Forensic toxicology. General aspects of poisoning. Types of poisons. Forensic diagnosis of poisoning. Methods in forensic	

toxicology. Gaseous poisons. Agrochemical poisons. Corrosive poisons. Heavy metals. Mushroom poisoning. Forensic toxicology. Alcohols. Medicolegal aspects of ethanol intoxication. Methanol poisoning. Ethylene glycol poisoning. Drugs of abuse and dependence. Forensic histopathology. Immunohistochemistry. Health care regulations. Status and role of a doctor in legal system of SR. Legal responsibility of the doctor. Medical errors. Iatrogenic damage. Expert activity in medical profession (Act No. 437/2004 Coll.). Forensic expert activity. Forensic medical examination of the living persons. Compensation for pain and deteriorated social and work capacity (Act No. 382/2004 Coll.).

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ULCHBKB/UO-V/16	<b>Course name:</b> Fundamentals in Nutrition and Clinical Dietology
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 2 <b>Per study period:</b> 28 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> IK/IM-V3/22	
<b>Conditions for course completion:</b> 1.Attendance confirmed in the attendance register /possible 2 excused absences/ 2.Completion of assigned tasks.	
<b>Learning outcomes:</b> To highlight the importance of good nutrition in the prevention and treatment of various diseases.	
<b>Brief outline of the course:</b> Basic concepts: nutrition, dietetics, dietetics, food, foodstuff, food, diet, nutrient. Division of nutrients, nutrient recommendations (RDAs) and recommended dietary allowances (RDAs) for different population groups. Current nutritional situation at home and worldwide. National Health Promotion Programme (EU programmes), development of food consumption of the population in the Slovak Republic, in the world and nutritional trends. Energy balance, the share of essential nutrients in the total energy of the diet. Proteins. Occurrence in food, amino acid composition, limiting AMK. Factors influencing protein utilization (AMK potential), antinutrients, production technologies, culinary preparation, storability, optimization possibilities.Lipids. Occurrence in food, hidden fats, fatty acid composition of fats and oils. Essential FAs, omega-6 and omega-3 polyunsaturated FAs, trans FAs, conjugated FAs and their effect on metabolism. Changes in composition and quality of fats during production (oils - refined, virgin, margarines, etc.). Changes during heat treatment. Options for optimising lipid intake. Steroids, animal and plant sterols, occurrence and effect on the body. Carbohydrates. Occurrence in food. Hydrolysable and non-hydrolysable by enzymes in the GIT. Effect of individual carbohydrates on metabolism (sucrose, fructose, starch, prebiotics, fibre) and development of metabolic syndrome. Mineral nutrition. Macro and micronutrients, their function. Occurrence in food and commodities. Mineral interrelationships (antagonistic, synergistic). Factors influencing their resorption. Metabolism of iron. Food additives (artificial, natural). Preservatives, antioxidants, emulsifiers and stabilisers, emulsions, dyes and bleaches, texturizers, sweeteners, etc. Restitution and fortification of foodstuffs.Basic principles of production of major foodstuffs and changes in nutritional value (meat and meat products, milk and milk products, cereals and bakery products), production of beverages and their impact on health. Nutritional supplements based on vitamins, natural mineral substances. Foods for special nutritional purposes and their production. Foods for infant and child nutrition.	

Foods with salt replacement (gluten-free and for diabetics), nutrition for the most common genetic defects. Food allergies, food from genetically modified organisms. Alternative forms of nutrition. Vegetarianism (ovo- and lacto-vegetarians), macrobiotics, vitarists, split diets, reduction diets. Parenteral nutrition and tube feeding. Realimentation and prevention of RFS. Diet in disorders of lipid metabolism. Omega-3- PNMK and metabolic syndrome.Reduction diets and evidence-based medicine. Malnutrition, obesity, probiotics.

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> G-PK/ GP-V1/09	<b>Course name:</b> Gynaecology and Obstetrics 1
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 2 <b>Per study period:</b> 28 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 3	
<b>Recommended semester/trimester of the course:</b> 9.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> IK/IM-V3/22	
<b>Conditions for course completion:</b> 100 % presences on lectures, minimum 60 % of point in exam test	
<b>Learning outcomes:</b> Learning outcomes: Getting to knowledge the principal investigation in gynecology: digital assessment, assessment in specula, oncocytology and colposcopy. In Second goal student obtain knowledge in imaging ,methid as ultrasonography, CT and MRI. Student in this part of study obtain knowledge about principal surgical methods as: curettage, hysteroscopy, laparoscopy, surgical treatment of pelvic organe prolapse and urinary incontinence and basic in oncogynecology. In the same part will be presented diagnostic and terapeutic options in women infertility. Student will also obtain knowledge about diagnostic a terapeutic options of breast diseases. Inseparable part of study will be training skill in center of simulations and virtual medicine.	
<b>Brief outline of the course:</b> Brief outline of the course: Digital assessment, assessment in specula, oncocytology, colposcopy, USG, CT, MRI, menstrual disorders infertility, urogynecology, breast disease, infertility, oncogynecology

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> USL/ PZLP-V/16	<b>Course name:</b> Health Damage in Medical Practice
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 / 1 <b>Per study period:</b> 14 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 8., 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> Attendance on lectures and seminars to the specified extent, successful presentation of seminar work.	
<b>Learning outcomes:</b> The subject offers a comprehensive view on the various types and causes of health damage that every doctor might encounter during clinical practice. Unlike clinically oriented subjects that are focusing on pathological conditions in terms of their etiology, diagnosis and treatment, this elective course focuses rather on the assessment of specific health damage such as one resulting from a criminal offence, accident or medical malpractice. Topics regarding epidemics, pandemics and bioterrorism also deal with specific approach of health professionals and altered conditions for provision of health care, especially in terms of protection of own health.	
<b>Brief outline of the course:</b> Definition of health damage and its classification from different points of view. Health damage due to a disease and external factors. Bodily harm from legal point of view. Assessment of traumatic injury. Medical records management. Diagnoses, their arrangement and relevance for forensic and legal purposes. Assessment of the causal link between diagnosis and patient data. Assessment of long-term sickness absence. Traumatic health damage. Traffic accidents – forensic assessment. Quantification of injuries in traffic accidents. Quantification of injuries in traffic accidents. Direct and associated complications of traumatic injuries. Injury Severity Score (ISS). Abbreviated Injury Scale (AIS). Health damage resulting from the offense. Forms of physical abuse. CAN syndrome. Examination of the person injured while committing a crime and the person suspected of committing a crime. External examination of the person after the committed crime. Biological and chemical weapons of mass destruction in connection with damage to human health. Bioterrorism. Biohazard Safety Level (BSL) and its importance. Work in a BSL regime in case of biological threat. Mass casualty incident. M.E.T.H.A.N.E. method. Sorting of wounded people. Triage (START). Compensation for the pain and deteriorated social and work capacity. Damage to health during provision of health care. Medical malpractice. Lege artis. Supervision of provision of health care and. Health Care Surveillance Authority (HCSA) in Slovakia. Expert activity in the field of healthcare and pharmacy in cases of health damage. HCSA vs. medical expert activity in	

case of damage to health during provision of health care. Importance of health damage assessment from the point of view of commercial insurance companies.

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ULI/ NIS-V/17	<b>Course name:</b> Hospital Information System
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 0 / 1 <b>Per study period:</b> 0 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 3.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ULI/LI-V/22	
<b>Conditions for course completion:</b> <ol style="list-style-type: none"> <li>1. 100% and active attendance.</li> <li>2. Min. 60% from each test during the term.</li> <li>3. Elaboration of all assigned tasks.</li> <li>4. Final exam.</li> </ol>	
<b>Learning outcomes:</b> The main aim is to manage work with the real hospital information system. Students should understand principles of electronic health records, to know how to organize patients administration using individual modules of information system and to understand flow of information across the hospital departments and clinics.	
<b>Brief outline of the course:</b> Basics of hospital information systems. Parts of complex HIS (modules), access rights, interface description. Communication between users of HIS. Central register, Central card. Module of Outpatient clinic, creation of new outpatient clinic card, entry examination, anamnesis, emergency data set, score schemes, examination requests and orders, waiting room, outpatient clinic examination, consilium report, dispensatory treatment. Module of Hospital departments, administrative acceptance of patient for hospitalisation, entry examination, organisation of patients in rooms and beds, creation of health care records, displacement of patients in and between hospital departments, administrative discharge of hospitalised patients, final report. Gynaecological and maternity department. Module of Intensive Care Units. Module of Surgery departments. HIS for nurses and caregivers.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> UVZH/ H-V/18	<b>Course name:</b> Hygiene
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 / 2 <b>Per study period:</b> 14 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 3	
<b>Recommended semester/trimester of the course:</b> 7.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> UFZ/FZ-V2/14	
<b>Conditions for course completion:</b> Preparation and presentation of seminar work for seminars	
<b>Learning outcomes:</b> The student will gain knowledge about the laws of the living and working environment, about the impact of individual lifestyle factors on health and about promoting the health of the population through prevention.	
<b>Brief outline of the course:</b> Primary prevention in population health care. Primary, secondary and tertiary prevention of chronic non-infectious diseases (cardiovascular, tumor, mental, metabolic, injuries, chronic respiratory, other). State health supervision, its meaning, structure of the hygiene service. Principles of assessment of health risks in the living and working environment. The influence of environmental factors on health. Environmental hygiene, air, contaminants, impact on health. Water and its impact on health. Basic components of nutrition, their importance and daily intake, rational nutrition. Food hygiene, principles of food control, foreign substances in food. Occupational hygiene, health protection at the workplace, distribution and influence of factors of the working environment on health (physical, chemical, biological, ergonomic, specific, non-specific, risky work). Impact of ionizing and non-ionizing radiation on health, population protection. Hygiene of medical facilities. Hygienic issues of housing and urbanization. Hygiene of children and youth. Growth and development of children, their health determinants depending on ŽP. Practical and theoretical principles in the field of planning, creation, implementation of population studies and monitoring of health determinants.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> KRZM/ ZMLS-V/09	<b>Course name:</b> Imaging Possibility of Lymphatic System
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 / 1 <b>Per study period:</b> 14 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> Completion of lectures, consultation before the exam, written test at the exam, including the completion of a precise number of image descriptions to determine the diff. dg. of the lymphatic system by all available imaging methods.	
<b>Learning outcomes:</b> The lymphatic system is extremely variable, difficult to assess, and related to every organ. Its visualization is problematic. Therefore, different imaging methods will have to be used and compared. As a result of the training, students will be more aware of this very complex system, anatomically, physiologically and pathologically, which will be achieved in part by imaging methods such as lymphoscintigraphy, computed tomography and ultrasonography and, in some cases, by classical lymphography and magnetic resonance imaging. Of course, where possible, the results can also be compared with histological findings, thus achieving a more accurate result.	
<b>Brief outline of the course:</b> Anatomy and pathological anatomy N Physiology and pathophysiology LS Histological changes of the LS in individual diagnoses LS within internal medicine. LS within surgical disciplines (surgery, urology, plastic surgery) Secondary changes (post-traumatic ) LS Congenital (primary) changes of the LS and its anomalies. Methods of pre- and post-operative treatment of LS and physiotherapy Lymphatic drainage ( or lymphomassage) in postoperative -mostly oncological conditions.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> KICM/ IL-V/19	<b>Course name:</b> Infectology
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 / 3 <b>Per study period:</b> 14 / 42 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 3	
<b>Recommended semester/trimester of the course:</b> 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> IK/IM-V3/22	
<b>Conditions for course completion:</b> CP - Conditions for passing the subject: Mandatory 90% participation in practical exercises, theoretical and methodical mastery of practical tasks. For serious reasons - after documentation - a maximum of 1 exercise can be excused. Teaching: Lectures will take place according to the schedule. Practical teaching at the clinic. For each topic, in addition to the theoretical background, emphasis will be placed on the presentation of case reports of real or model patients. Consultation hours on the topics of the day will be offered to students by phone, chat or e-mail after an appointment. Individual teachers will be available on their work phone numbers or e-mail addresses, which will be announced to students. Evaluation of acquired knowledge: At the end of each block, students write a final test consisting of 10 questions, to be admitted to the oral exam, a minimum of 70% of points must be obtained. After successfully completing the test, an oral exam will follow. The final evaluation takes into account the results of the written and final oral exam.	
<b>Learning outcomes:</b> ER - Education results : Epidemiological aspects and basics of diagnosis and prevention of infectious diseases, basic principles of anti-infective treatment, current problems of 21st century infectology.	
<b>Brief outline of the course:</b> CC - Course contents: Lecture topics: Introduction to infectology. Principles of antibiotic treatment. Nosocomial infections. Respiratory infections. COVID-19. Viral hepatitis. Differential diagnosis of exanthems. Neuroinfections. Lyme disease. HIV infection. Schedule of seminars Monday: Nature of infectious diseases. Operation of infectious disease departments, isolation, reporting of infectious diseases. Principles of laboratory diagnostics. Care of a patient with a highly contagious disease, Bioterrorism. Principles of antibiotic treatment. Tuesday: Respiratory infections. COVID-19. Sepsis. Wednesday: Acute and chronic viral hepatitis. Prophylactic measures after an animal bite, prevention of rabies. Thursday Neuroinfections. Lyme disease. Infections in pregnancy. Differential diagnosis of febrile conditions, fever of unknown origin. Friday: HIV infection. Nosocomial infections. Monday: Active and passive immunization. Soft tissue infections. Tuesday 1. Infections of the gastrointestinal tract. Parasitic infections-an overview. The most common zoonoses.

22. Bradyarytmie - choroba sínusového uzla, poruchy A-V prevodu
23. Srdcové zlyhávanie
24. Krátkodobé poruchy vedomia, synkopy
25. Šok – diferenciálna diagnostika a liečba
26. Kardiorespiračná resuscitácia
27. Vyšetrovacie metódy v pneumológii
28. Astma bronchiale
29. Chronická obštrukčná choroba pľúc, bronchiektázie
30. Respiračná insuficiencia
31. Zápalové ochorenia pľúc a ich komplikácie
32. Nádory pľúc a pleury
33. TBC – epidemiológia, etiopatogenéza, diagnostika, klinické prejavy a liečba
34. Choroby mediastína, sarkoidóza
35. Choroby pohrudnice
36. Difúzne intersticiálne pľúcne choroby
37. Vyšetrovacie metódy v nefrológii a diferenciálna diagnostika obličkových ochorení
38. Akútne glomerulonefritídy
39. Chronické glomerulonefritídy
40. Nefrotický syndróm
41. Intersticiálne nefritídy
42. Nádory obličiek, polycystické obličky, nefrolitiáza
43. Akútna renálna insuficiencia
44. Chronická renálna insuficiencia
45. Vyšetrovacie metódy v gastroenterológii
46. Vyšetrovacie metódy v hepatológii
47. Vyšetrovacie metódy pri ochoreniach pankreasu
48. Choroby pažeráka
49. Akútne a chronické gastritídy, peptický vred, komplikácie a liečba
50. Nádory žalúdka
51. Chronické zápalové ochorenia čriev
52. Nádory tenkého a hrubého čreva
53. Chronické hepatitídy
54. Cirhóza pečene
55. Akútne a chronické zlyhanie pečene
56. Diferenciálna diagnostika ikteru
57. Toxické poškodenie pečene. Pečeň a poruchy metabolizmu
58. Krvácanie z GITu – etiopatogenéza, klinika, diagnostický postup a liečba
59. Horný a dolný dyspeptický syndróm, colon irritabile
60. Nádory pečene a žlčových ciest
61. Choroby žlčníka a žlčových ciest - klinické manifestácie a komplikácie
62. Pankreatitídy
63. Nádory pankreasu
64. Malabsorpčný syndróm
65. Diagnostika a liečba akútnych stavov v gastroenterológii
66. Vyšetrovacie metódy pri ochoreniach štítnej žľazy
67. Vyšetrovacie metódy pri ochoreniach kôry nadobličiek
68. Hypofyzárne hyperfunkčné syndrómy
69. Hypopituitarizmy
70. Ochorenia neurohypofýzy - diabetes insipidus, SIADH

71. Eufunkčná struma, zápalové a nádorové ochorenia štítnej žľazy
72. Hypertyreóza
73. Hypotyreóza
74. Choroby prištítnych teliesok
75. Hypokorticismy
76. Hyperkorticismy - Cushingov syndróm
77. Choroby sympatoadrenálneho systému, feochromocytóm
78. Primárne a sekundárne hyperaldosteronizmy
79. Endokrinné poruchy mužských a ženských gonád
80. Diagnostika a liečba akútnych stavov v endokrinológii
81. Vyšetrovacie metódy v hematológii
82. Anémie - klasifikácia a diferenciálna diagnostika
83. Mikrocytové anémie
84. Makrocytové anémie
85. Hemolytické anémie
86. Akútne leukémie
87. Myeloproliferatívne ochorenia
88. Myelodysplastický syndróm
89. Chronická lymfocytová leukémia
90. Hypokoagulačné stavy - vrodené a získané
91. Trombocytopenie a trombocytopatie
92. Hyperkoagulačné stavy, diseminovaná intravaskulárna koagulopatia
93. Antikoagulačná a fibrinolytická liečba
94. Malígne lymfómy
95. Monoklonové gamapatie
96. Aplastická anémia
97. Transfúzia krvi, liečba krvnými derivátmi
98. Komatózne stavy v internej medicíne
99. Diferenciálna diagnostika opuchov v internej medicíne
100. Diferenciálna diagnostika bolesti na hrudníku
101. Diferenciálna diagnostika bolesti chrbta
102. Diferenciálna diagnostika dyspnoe
103. Subfebrility a febrility v internej medicíne- postup pri ich diferenciálnej diagnostike
104. Fokálna infekcia a sepsa
105. Splenomegália a hypersplenizmus
106. Liečba antibiotikami
107. Poruchy metabolizmu elektrolytov a vody
108. Poruchy acido-bázickej rovnováhy
109. Vyšetrovacie metódy v klinickej genetike a indikácie genetického vyšetrenia
110. Paraneoplastický syndróm
111. Náhle cievne mozgové príhody
112. Poruchy lipidového metabolizmu
113. Etiopatogenéza, klasifikácia, diagnostické kritéria a kritéria kompenzácia diabetes mellitus
114. Diabetes mellitus – akútne komplikácie a liečba
115. Diabetes mellitus – chronické komplikácie a liečba
116. Diabetes mellitus 1. typ – etiopatogenéza, diagnostika a liečba
117. Diabetes mellitus 2. typ - etiopatogenéza, diagnostika a liečba
118. Obezita – diagnostika a liečba, metabolický syndróm

119. Porfýrie
120. Klinické prejavy z nedostatku vitamínov
121. Reumatoidná artritída
122. Spondylartritídy – Morbus Bechterev, reaktívne, psoriatické a enteropatické artritídy
123. Arthritis urica, hyperurikemický syndróm
124. Osteoporóza a osteomalácia
125. Systémový lupus erythematosus
126. Vaskulitídy (rozdelenie) - polyarteritis nodosa a príbuzné ochorenia
127. Systémové ochorenia spojiva - progresívna systémová skleróza, sklerodermia, Sjögrenov syndróm, dermatomyozitída
128. Diagnostické a terapeutické postupy pri akútnych otravách
129. Otravy drogami - drogy stimulujúce CNS, drogy s tlmivým účinkom na CNS (etanol, metanol)
130. Otrava hubami
131. Otrava organofosfátmi a CO
132. Otravy liekmi - paracetamol, ibuprofen, salicyláty, antihistaminiká
133. Liečba kortikoidmi - indikácie a kontraindikácie, vedľajšie nežiadúce účinky
134. Poruchy imunity - imunodeficitné stavy, hypersenzitívne stavy, autoimunita
135. Imunomodulačná liečba - imunosupresívna, imunostimulačná a imunorešturačná – indikácie vo vnútornom lekárstve

<b>Conditions for course completion:</b> I. The following are required for successful completion of the practical exercises/seminars: - 100% participation in practical exercises, theoretical and practical performance of all exercises - Obtaining at least 60 % of the total score in the form of a test and theoretical preparation for the practical exercises/seminars. - 2 excused absences allowed II. The following are required for successful completion of the course and to receive credits: - Successful completion of the practical exercises/seminars, with the possibility of practical exercises in the Simulator Training Centre - Control tests are evaluated on the basis of the number of points achieved (%) with evaluation according to the Study Regulations of the UPJŠ in Košice, Faculty of Medicine Part II, Article 13, paragraph 4 - The final evaluation takes into account the results of the interimmediate evaluation - To the exam bring the student's book with the appreciation /patient/ - For the pre-term, a teacher's recommendation is required based on the student's active approach, excellent theoretical and practical knowledge and passing the test with at least 90%	
<b>Learning outcomes:</b> Basic clinical nomenclature, evaluation of anamnestic data and physical examination in internal medicine. Evaluation of basic auxiliary examination methods.	
<b>Brief outline of the course:</b> Introduction to clinical medicine. History taking .Inspection – part I. General inspection, consciousness, position, shape and size, skin inspection. Inspection – part II. Special inspection.Palpation – the head, neck, chest (lungs and heart), abdomen, physical examination of ascites. Palpation of the peripheral vessels, Examination of the pulse.Main symptoms in the diseases of the GIT (liver, gallbladder, pancreas) and diseases of the kidneys and urinary tract.Percussion of the lungs, heart and abdomen – physiology and pathology.Auscultation of the lungs – physiological and pathological findings. Main symptoms in most frequent diseases (bronchitis, asthma, pneumothorax, pneumonia and pleuritis.Auscultation of the heart. Heart sounds and murmurs. Physical findings in the most frequent heart diseases (inspection, palpation, auscultation).Principles of clinical electrocardiography - normal ECG, pathologic changes, myocardial hypertrophy, electrolyte disturbances.ECG – coronary heart disease, acute myocardial infarction, pulmonary	

embolism, pulmonary heart disease, myocarditis, pericarditis. ECG – arrhythmias. Basic principles of X-ray in Internal Medicine. X-ray of the chest – pathological findings. The current timetable for a given term is published on the electronic bulletin board of the course in AiS2 or on the clinic's website.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> IK/IM-V1/16	<b>Course name:</b> Internal Medicine 1
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 3 / 3 <b>Per study period:</b> 42 / 42 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 5	
<b>Recommended semester/trimester of the course:</b> 6.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> UFZ/FZ-V2/14 and IK/IP-V/15	
<b>Conditions for course completion:</b> 1. For successful completion of the practical exercises/seminars is required: - To participate at all of practical exercises, theoretical and practical performance of all exercises/seminars, it is possible to complete practical exercises in the Center for Simulator Teaching - To get at least 60 % of total score for ongoing review of written test and the theoretical training to practical exercises. - Two absences are allowed /justified/ 2. For successful obtained of the credits from subject is necessary: - To gain the credit from practical exercises (paragraph 1 above). - Evaluation: Study rules of procedure UPJŠ in Košice, the Faculty of Medicine, Part II, Art13 - The final classification includes the evaluation of the written test and the results obtained in practical exercises	
<b>Learning outcomes:</b> Gain basic theoretical knowledge of cardiology and pneumology, get acquainted with the examination procedures used in these diseases.	
<b>Brief outline of the course:</b> Investigation methods in pneumology. Inflammatory lung diseases. Chronic obstructive pulmonary disease. Chronic respiratory insufficiency. Tuberculosis – epidemiology, prevention and treatment. Bronchogenic carcinoma, other lung tumours. Bronchial asthma – diagnosis and treatment. Interstitial lung diseases. Coronary heart disease- diagnosis and treatment. Myocardial infarction – clinical features, diagnosis and treatment. Endocarditis, myocarditis and pericarditis – dif. diagnosis and treatment. Heart failure. Heart rhythm disorders I. Heart rhythm disorders II. Angiology. Peripheral vascular diseases. Acute and chronic cor pulmonale. Thromboembolic disease. Arterial hypertension. Syncope. Shock. Echocardiography. Secondary hypertension – differential diagnosis. Cardiomyopathy. Diseases of the aorta. The current timetable for a given term is published on the electronic bulletin board of the course in AiS2 or on the clinic's website.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> IK/IM-V6/22	<b>Course name:</b> Internal Medicine 6
<b>Course type, scope and the method:</b> <b>Course type:</b> Practice / Controlled study hour <b>Recommended course-load (hours):</b> <b>Per week: Per study period:</b> 320s / 60s <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 13	
<b>Recommended semester/trimester of the course:</b> 11., 12..	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> IK/IM-V5/22 and NLK/NL-V2/22	
<b>Conditions for course completion:</b> 1. For successful completion of the practical exercises/seminars is required: - To participate at all of practical exercises, theoretical and practical performance of all exercises/seminars. - To get at least 60 % of total score for ongoing review of written test /60 questions/ and of the theoretical training to practical exercises. - Two absences are allowed /justified/ 2. For successful obtained of the credits from subject is necessary: - To gain the credit from practical exercises (paragraph 1 above). - Examining of the patient, dg., dif. dg., treatment - Evaluation: Study rules of procedure UPJŠ in Košice, the Faculty of Medicine, Par II, Art13 - Students attending IM 6 abroad must complete a practical part of the exam including a test no later than 10 days prior to the final state examination in the original study group - The final classification includes the evaluation of the written test and the results obtained in practical exercises - To the state exam bring the student's book with the appreciation	
<b>Learning outcomes:</b> Problem-based teaching with a differential diagnostic approach to individual diseases within the sub-disciplines and mastering the issue of acute conditions in individual sub-disciplines.	
<b>Brief outline of the course:</b> Differential diagnosis of jaundice. Alcoholic liver disease. Acid – base balance disorders. Immunodeficiency. Immunomodulatory, immunosuppressive and immunorestant treatment. Syncope. Shock. Paraneoplastic syndrome. Differential diagnosis of chest pain. Medical genetics in clinical practice. Focal infection and sepsis. Fever – differential diagnosis in internal medicine. Differential diagnosis of oedema in internal medicine. Cardiology - ischemic heart disease, congestive heart failure - arrhythmias - valvular heart disease - cardiomyopathy - arterial hypertension, secondary hypertension - ECG evaluation - echocardiographic investigation Pneumology	

- asthma bronchiale, chronic obstructive lung disease
- respiratory insufficiency
- tumours of the respiratory tract
- pneumonias, disorders of the pleura
- spirometry investigation
- differential diagnosis of dyspnoea

#### Gastroenterology

- acute stages in gastroenterology
- inflammation bowel disease
- differential diagnosis of jaundice
- liver cirrhosis, liver failure
- diseases of the gallbladder and biliary tract
- pancreatitis and tumours of the pancreas

#### Nephrology

- acute kidney injury
- chronic kidney disease
- glomerulonephritis
- tubulointerstitial nephritis

#### Endocrinology and diabetology

- thyroid gland disorders
- adrenal gland disorders
- acute states in diabetology and endocrinology
- diabetes mellitus type 1
- diabetes mellitus type 2
- obesity and metabolic syndrome

#### Haematology

- differential diagnosis of anaemias
- myeloproliferative disorders
- lymphoproliferative disorders
- blood transfusion
- inherited and acquired coagulation disorders
- leukaemia

#### Rheumatology

- rheumatoid arthritis
- seronegative spondylarthritis
- systemic lupus erythematosus
- vasculitis
- osteoporosis

#### Varia

- poisoning: drugs, ethyl alcohol, methyl alcohol, ethylene glycol, mushrooms
- acid-base disorders
- water-electrolyte disorders
- cardiopulmonary resuscitation
- antibiotics and immunosuppressive treatment

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ULCHBKB/LDKP-V/13	<b>Course name:</b> Laboratory Diagnosis in Clinical Practice
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 0 / 1 <b>Per study period:</b> 0 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 7.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> lectures, practical exercise; more informations: <a href="https://www.upjs.sk/lekarska-fakulta/en/departament/medical-and-clinical-biochemistry/education/subjects/general-medicine/">https://www.upjs.sk/lekarska-fakulta/en/departament/medical-and-clinical-biochemistry/education/subjects/general-medicine/</a>	
<b>Learning outcomes:</b> Laboratory diagnostics is an everyday part of the practice of both general practitioners and specialists. In addition to the basic approaches in the diagnosis, treatment and prevention of diseases, there are also laboratory examinations of body fluids, the analysis of which the graduate of the course should be able to handle. In recent years, many new analytes and approaches have emerged in the field of laboratory diagnostic procedures, not only in the field of molecular biological or proteomic techniques, with which students will be acquainted. The graduate knows the current laboratory methods and their use in clinical diagnostics at the theoretical and practical level, including changes and adjustments to recommended procedures, reference intervals and methods used.	
<b>Brief outline of the course:</b> Analytical methods (eg spectral, electrochemical, chromatographic, immunochemical, enzyme analysis, biosensors). Choice of analytical method (eg based on biological variability, clinical success). Laboratory technology (eg automation, laboratory information system). Therapeutic monitoring of drug levels, basics of toxicology, basic methods of molecular biology. More details: <a href="https://www.upjs.sk/lekarska-fakulta/en/departament/medical-and-clinical-biochemistry/education/subjects/general-medicine/">https://www.upjs.sk/lekarska-fakulta/en/departament/medical-and-clinical-biochemistry/education/subjects/general-medicine/</a>

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ULCHBKB/LBC-V1/20	<b>Course name:</b> Medical Biochemistry 1
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 3 <b>Per study period:</b> 28 / 42 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 5	
<b>Recommended semester/trimester of the course:</b> 3.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ULCHBKB/LCH-V/22	
<b>Conditions for course completion:</b> lectures, practical exercises, seminars, exam; more details: <a href="https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/">https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/</a>	
<b>Learning outcomes:</b> In the medical study, medical biochemistry plays an irreplaceable role, which is to teach students to perceive life processes as events taking place at the molecular level. Only with such a view can the future doctor take an objective and exact opinion when deciding on the treatment procedure. The graduate masters the course of biochemical processes, is able to distinguish pathological processes from physiological processes at the level of reactions taking place in the cell. It perceives biochemical reactions in the cell as part of metabolism and understand the regularities of metabolism regulation.	
<b>Brief outline of the course:</b> Enzymes and their role in metabolism (e.g. kinetics of enzymatic reactions, coenzymes – the structure and function). Intermediary metabolism – cell biochemistry (e.g. macroergic compounds, respiratory chain, the citric acid cycle, oxidation stress). Carbohydrate metabolism (e.g. oxidative decarboxylation of pyruvate, glycolysis, gluconeogenesis, metabolism of glycogen). Degradation and synthesis of triacylglycerols and fatty acids. Metabolism of phospholipids, leukotriens, cholesterol, lipoproteins. Intermediary metabolism relationships between lipids and saccharides. Disorders of metabolism saccharides and lipids. More information: <a href="https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/">https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/</a>

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ULCHBKB/LBC-V2/20	<b>Course name:</b> Medical Biochemistry 2
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 3 / 3 <b>Per study period:</b> 42 / 42 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 7	
<b>Recommended semester/trimester of the course:</b> 4.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ULCHBKB/LBC-V1/20	
<b>Conditions for course completion:</b> lectures, practical exercises, seminars, exam; more details: <a href="https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/">https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/</a>	
<b>Learning outcomes:</b> The graduate will understand the course of biochemical processes of physiological life processes as events taking place in individual organs and tissues of man. He can distinguish basic pathological processes from physiological processes, while he perceives biochemical processes in individual organs and tissues as a part of cellular metabolism. The graduate masters the laws of biochemical regulation of metabolism and learns the basics of clinical-biochemical diagnostics.	
<b>Brief outline of the course:</b> Metabolism of amino acids (e.g. ammonia formation and urea synthesis, biogenic amines, biosynthesis of catecholamines). Metabolism of nucleotides. Intermediary metabolism relationships. Nucleic acids (e.g. replication, transcription, translation). Regulation of gene expression and gene engineering. Synthesis and modification of native proteins. Chemical communication in living systems (e.g. hormones). Biochemistry of blood. Pathobiochemical processes in cell. Special metabolic processes (e.g. liver, kidney, metabolism of minerals and trace elements). Biochemistry and pathobiochemistry of digestion and nutrition. Metabolism of foreign compounds – xenobiochemistry. Introduction to clinical biochemistry. More details: <a href="https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/">https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/</a>

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ULBF/ LBF-V/22	<b>Course name:</b> Medical Biophysics
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 4 / 3 <b>Per study period:</b> 56 / 42 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 8	
<b>Recommended semester/trimester of the course:</b> 1.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> The assessment of the student's knowledge during the semester consists of written tests on the exercises, protocols on the measured topic and a written test on the topics from the lectures. Mandatory attendance at lectures is at least 60%. The student must master the lecture topics at the final exam in the content and form presented, even when he has not participated in the lecture. The examination is allowed if the student obtains at least 60% of the maximum theoretically attainable number of points during the semester. The exam takes place in written form (100%). The condition for successfully passing the exam is to prepare an answer to at least 60% of the required knowledge.	
<b>Learning outcomes:</b> The subject brings the knowledge about the following: 1. physics basic laws and mechanisms associated with the human body functioning, 2. physical principles of the cutting edge diagnostic and therapeutic methods exploited in the general medicine, irredeemable for their highly qualified use, 3. the influence of the environment physical factors on the human organism health.	
<b>Brief outline of the course:</b> <ul style="list-style-type: none"> <li>- subatomic, atomic and molecular composition of the human body</li> <li>- physical properties of tissues of the human body</li> <li>- the interaction between the particles creating the human body</li> <li>- the interaction of the living matter with non ionizing as well as ionizing electromagnetic radiation, used in both - the therapy and diagnostics</li> <li>- the sources of the own and mediated biosignals</li> <li>- concrete manifestations of the biophysical mechanisms on the level of subcellular structures, the cells, the tissues and organs of the human body</li> <li>- physical principles of the diagnostic and therapeutic methods</li> </ul>

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ULCHBKB/LCH-V/22	<b>Course name:</b> Medical Chemistry
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 2 <b>Per study period:</b> 28 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 5	
<b>Recommended semester/trimester of the course:</b> 2.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> lectures, seminars, practical exercise, exam; more details: <a href="https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/">https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/general-medicine/</a>	
<b>Learning outcomes:</b> The graduate will acquire knowledge of general, physical, inorganic and bioorganic chemistry as well as methodologically very important - analytical chemistry. Graduates know the structures and functions of medically important substances, they will know the importance of acid-base properties of substances, energy processes and will understand the essence of chemical processes taking place in living systems. The acquired knowledge will contribute to a better understanding of the functions of the whole organism and is the basis for successful mastery and correct completion of medical biochemistry, which is a good theoretical basis for several medical disciplines.	
<b>Brief outline of the course:</b> Properties of disperse systems and biological importance of water. Buffer solutions and pH calculation (titration). Colloid systems. Thermodynamics and kinetics of chemical reactions. Biochemical aspects of redox reactions. Elements and their compounds in medicine. Solution (concentration, dilution - calculations). Organic chemistry (e.g. heterocyclic compounds, carboxylic acids). Saccharides. Lipids. Amino acids. Proteins. Nucleic acids. Natural compounds (e.g. vitamins). <b>Course ID:</b> UVZH/ ME-V/15	<b>Course name:</b> Medical Ecology
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 0 / 1 <b>Per study period:</b> 0 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 3.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ULBL/BL-V1/09	
<b>Conditions for course completion:</b> Preparation and presentation of seminar work for seminars, written exam test minimum 60%	
<b>Learning outcomes:</b> The student will gain knowledge about the relationship between man and the environment, about mutual interactions and the consequences of human activity on the quality of the environment. He knows the possibilities of solving the condition and preventing damage to health and the environment.	
<b>Brief outline of the course:</b> Fundamental of ecology. Basic factors in ecology influencing on health. Methods of epidemiological work, the strategy on environment and health. Biological features of human population. Adaptation of man on the environment. Adaptability. Forms of stress. Global perspective in terms of human ecology. Urban environment and health risks. The components of the environment (atmosphere, hydrosphere, lithosphere, waste) and health, the possible environmental impact of the polluted environment on population health, health risks. The inorganic and organic pollutants. Allergies, allergens, distribution, concepts, preventive measures. Effects of different factors on health (physical, chemical, biological, microbiological factors, infectious risk factors and disease, presence in the environment and working environment). Ecology of parasites and pathogen emergence and spread conditions, effects on human health (cause disease and prevention). Cancer disease and prevention. The impact of carcinogens in living and working environment, risk of cancer - for gastrointestinal tumors, respiratory system, blood, sexual organs of men and women skin. Cancer risk prevention.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> USL/ LE-V/16	<b>Course name:</b> Medical Ethics
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 / 1 <b>Per study period:</b> 14 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 3.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> Attendance on lectures and seminars to the specified extent, successful completion of a credit test and oral exam.	
<b>Learning outcomes:</b> The student acquires knowledge of ethical dimension and requirements of health care profession, and learns how to recognize principles of medical ethics in solving complicated ethical issues in selected areas of medical practice, such as informed consent of the patient, terminally ill and dying patients, euthanasia, assisted suicide, biomedical research, etc.	
<b>Brief outline of the course:</b> Ethics and morality. Bioethics and Medical Ethics. Landmark events in the evolution of bioethics. Global ethics and bioethics. Goals and ethical aspects of health care. Medical ethics. The basic principles of medical ethics. Ethical dilemma. The ethics of medical education. UPJŠ in Košice Code of Student Conduct. Hippocratic Oath. Physician's Pledge. Character requirements for medical profession. WMA International Code of Medical Ethics. Ethical Code for Health Care Providers in Slovakia. Important international conventions and declarations relevant to the health care professions. Patients' rights. Slovak Medical Chamber and Health Care Surveillance Authority in Slovakia. Human dignity in health care. Doctor – patient relationship. Informed consent/refusal – ethical and legal issues. Previously expressed wish of the patient. Communication in medical care. Guide to medical interview. Approach to specific patient groups. Burnout syndrome in medical profession. Ethical and legal issues in pediatrics. The rights of hospitalized children. Elderly patient. Risks in the hospital by elderly patients. Terminal illness. Ethical aspects of resuscitation and intensive care. Futile treatment. Dying patient – ethical and legal issues. Ethical issues in thanatology. Euthanasia and dysthanasia. Assisted suicide. Ethical aspects of organ and tissue transplantation. Living and dead donors. Ethical status of the dead human body. Ethics of autopsy and exhumation. Ethical aspects of examination in forensic medicine and pathology. Reproductive medicine and responsible parenthood. Methods used to achieve or prevent pregnancy. Surrogacy. Ethical issues of abortions. Surrogacy. Ethical issues in selected medical divisions [neonatal and fetal medicine, gynecology and obstetrics, surgery, nephrology, psychiatry, prehospital emergency care]. Ethics of expert activities in medicine. Ethics in biomedical research. Ethical and legal regulations regarding biomedical research involving human subjects. Ethical issues in animal	

experimentation. Ethics Committees. Publication ethics. Ethical issues in human genetics and genomics. Genetic testing and preimplantation genetic diagnosis. Gene therapy and genetic manipulation. Ethics of 'designer babies'. Ethical aspects of human cloning. Ethical issues in stem cell research and therapy.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ULI/LI-V/22	<b>Course name:</b> Medical Informatics
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 0 / 2 <b>Per study period:</b> 0 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 2.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> 1. 100% and active attendance. 2. Min. 60% from each test during the term. 3. Elaboration of all assigned tasks.	
<b>Learning outcomes:</b> The aim of the course is to get knowledge about the basic terms, methods and tools of information and communication technologies. To reach the computer skills at the level, that allows students to create and to use databases and to get skills in information systems used in health care system. Students should also understand the importance of medical terminology, standards and evidence based medicine.	
<b>Brief outline of the course:</b> Utilization of ICT and informatics tools in medicine, eHealth, electronic health record, ePrescription, eMedication, eAllocation, information systems, telemedicine, bioinformatics, electronic signature, eLearning. Databases, data processing, database tables, primary keys, input mask, relations between tables. Forms in database, controls in forms, searching for information in database, data filtering, data sorting, queries, selection criteria, working with printing reports. Introduction into the biomedical statistics, descriptive statistics. Hospital information system. Terminology in medicine. PACS. Laboratory information system. Evidence based medicine.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> USL/ MP-V/16	<b>Course name:</b> Medical Law
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 / 1 <b>Per study period:</b> 14 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 6., 8., 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> KKF/LTM/07 and UO/ZZS-V2/09	
<b>Conditions for course completion:</b> Attendance on lectures and seminars to the specified extent, successful presentation of seminar work.	
<b>Learning outcomes:</b> Every doctor is obliged to practice his profession in accordance with generally binding legal regulations. Knowledge of the legal norms concerning provision of health care, basic duties of a health care professional, as well as basic rights and obligations of patients, is therefore a necessary requirement of every future doctor. The aim of teaching the subject Medical Law is development of legal thinking required for everyday situations arising during the provision of health care such as informed consent of the patient, management and access to the medical records, resolution of legal issues in the relationship between the doctor and the patient, the doctor and his/her colleagues, and the doctor and the employer, medical errors, expert activities, and cooperation with state authorities, including law enforcement agencies.	
<b>Brief outline of the course:</b> Medical law. Health care regulations. De lege artis. Conscientious objection in health care. Legal requirements to medical profession. Continuous education of health care professionals. Specialization study. Forms of provision of health care. List of medical procedures. Rights and duties of people during provision of health care. Informed consent in medical care. Informed refusal in medical care. Health care providers and their duties. Rights and duties of health care professionals. Code of medical ethics in Slovakia. Ethical issues in provision of health care. Electronic healthcare (ehealth). National Health Information Center. Electronic passport of a health professional. Electronic health book. Medical documentation. Forms of keeping medical records. Provision and access to medical records. Professional organizations in healthcare. Slovak Medical Chamber. Slovak Medical Association. Health Care Surveillance Authority. Medical-Legal and Pathological-Anatomical Departments of HCSA. Procedures to be followed in case of death. Examination of the dead body at the scene. Autopsy and exhumation. Compensation of pain and deteriorated work capacity. Expert activity in health care. Experts, expert organizations, expert department. Doctor as a witness. Doctor as an expert witness. Types of legal responsibilities of the doctor. Medical malpractice: errors, mistakes, negligence.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> USBM/ MBV-V/10	<b>Course name:</b> Methodology of Biomedical Research
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 / 1 <b>Per study period:</b> 14 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 7.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> Individual work, course assignment during the semester, presentation of the assignment results before the end of the semester, compulsory participation at practices, final test.	
<b>Learning outcomes:</b> To provide students with basic information on the methodology of biomedical research: concepts, methods and research plans. To teach students to acquire, process and present scientific knowledge. Work with databases, scientific literature. Forms of presentation and scientific communication of research results: scientific article, oral presentation, poster.	
<b>Brief outline of the course:</b> The objectives of science. Ethical aspects of scientific research. The main stages and the basic steps of the research process. Selection and definition of research problems. Defining the concept of variable (categorization and types of variables). Internal and external validity of the experiment. Hypotheses (typology, characteristics, formulating and testing hypotheses). Research designs: experimental, quasi-experimental, non-experimental designs. Sampling (representative / non-representative, probability / non-probability). Overview of the basic research data collection methods: observation, interview, self-reports, biophysiologic measures. The criteria for selection and evaluation of measurement tools (validity, reliability). Communication in the research process (scientific article, oral presentation, poster). Critical evaluation of research reports (reviews, opinions).

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> NLK/ NL-V1/19	<b>Course name:</b> Neurology 1
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 2 <b>Per study period:</b> 28 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 4	
<b>Recommended semester/trimester of the course:</b> 7.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> (UA/A-V3/17 or UA/A-V2/22)	
<b>Conditions for course completion:</b> 1. Active participation in practical exercises. 2. Practical examination of the neurological patient. 3. Successful completion of the test, evaluation A – E (possibility to repeat the test 2 times).	
<b>Learning outcomes:</b> To learn the basics of neurotopic diagnosis and syndromology in neurology. To learn the neurological examination of the patient. To learn the basics of auxiliary electrophysiological (EEG, EMG, EP, polysomnography) and neuroimaging (ultrasound of brain vessels, CT, MR, angiography) examinations in neurology, their indications, interpretations and use in clinical practice.	
<b>Brief outline of the course:</b> Neurology - general considerations. History taking. Cranial nerves I-XII, anatomy, physiology, pathology. Affection of the upper and the lower motor neurons – anatomic and physiologic considerations, diagnosis of paralytic states – lesion of corticospinal tract, brain stem syndromes, lower motor neuron lesions. Sensation. Anatomy, pathology. Cerebellum. Anatomy. Paleocerebellar and neocerebellar syndromes. Disorders of stance and gait. Extrapyramidal system. Hypertonic - hypokinetic syndrom. Hypotonic - hyperkinetic syndrom. Dystonia. Language and higher cortical function. Physiological and anatomical considerations. Language disorders, brain lobes pathology. Consciousness and unconsciousness. Causes of unconsciousness, quantitative disorders of consciousness: drowsiness, stupor, coma. The investigation of unconscious patient. Glasgow coma scale. Delirium. Brain death. Meningeal syndrom. Cerebrospinal fluid. Physiology, pathology. Lumbar puncture. Intracranial hypertension. Herniation of the brain – temporal, occipital. Plane X-ray of the skull and spine. Computer tomography of the brain and spinal column. MRI of the brain and spinal cord. PET, SPECT, DAT SCAN. Neurophysiological examination in neurology. Evoked potentials, electromyography. General considerations, clinical value. Electroencephalography. Polysomnography. Ultrasound examination in neurology. Duplex ultrasound of extracranial and intracranial cerebral arteries. Angiography of cerebral arteries. General considerations, clinical value. Head injury. Concussion, subdural, epidural hematoma, contusion of the brain. Spinal column and spinal cord injury. Dementia. Diagnosis, differential diagnosis. Alzheimer disease, Lewy body disease, frontotemporal dementia. Vascular dementia,	

other dementias. Diagnostic, therapy. Sleep disorders. Hypersomnia of the CNS origin. Restless leg syndrome. Developmental diseases of the nervous system. Cranial abnormalities, cerebral palsy, fakomatosis, neurofibromatosis (M. Recklinghausen,) angiomas, myelodysplasia, syringomyelia.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> NLK/ NL-V2/22	<b>Course name:</b> Neurology 2
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 2 <b>Per study period:</b> 28 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 5	
<b>Recommended semester/trimester of the course:</b> 8.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> NLK/NL-V1/19	
<b>Conditions for course completion:</b> 1. 100 % participation in practical exercises, can be replaced by maximum of 3 exercises. 2. Passing the ROGO test with a minimum of 60% achieved in the test, the test can be taken a maximum of three times. 3. The condition for registering for the exam is the fulfillment of conditions 1-2. 4. Only students who pass the Neurology 2 test with a grade A or B can apply for the preterm. 5. The condition for passing Neurology 2 is successful completion of oral exam in regular term or 1 st or 2 nd repeat exam.	
<b>Learning outcomes:</b> Know the etiology, pathophysiology, clinical picture and basics of diagnosis, differential diagnosis and treatment of neurological diseases, focusing mainly on cerebrovascular, neurodegenerative, demyelinating, inflammatory, seizure, vertebrogenic, oncological diseases and diseases of the peripheral nervous system.	
<b>Brief outline of the course:</b> Ischemic stroke. Brain haemorrhage. Epilepsy and seizures. Diseases of the spinal column. Demyelinating diseases. Diseases of extrapyramidal system. Infections of the nervous system I. Infections of the nervous system II. Muscle diseases. Diseases of the peripheral nervous system. Metabolic disorders of the nervous system.

<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> KNM/ NM-V/14	<b>Course name:</b> Nuclear Medicine
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 / 1 <b>Per study period:</b> 14 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 8.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ULBF/LBF-V/22	
<b>Conditions for course completion:</b> During semester the students will pass 2 checkpoints – each for one credit. Students with results A-C can pass the preterm and other will pass the standard oral exam in normal term. Students with both results Fx – cannot go on exam and must repeat course in next semester.	
<b>Learning outcomes:</b> Students will understand the principles of Nuclear medicine. The diagnostics and therapy by NM methods and known indications; contraindications of the method and prepare of patients for them. Understand methods of radioprotection, new methods in imaging and its place in diagnostic process	
<b>Brief outline of the course:</b> 1. Principals and history of nuclear medicine; 2. Principals and methods of radioprotection in medicine; 3. Radiopharmaceuticals (RF): definitions, methods of preparing and quality control; 4. The instrumentation in nuclear medicine: Gamma camera, SPECT and PET hybrid methods with CT and MRI tomography and principals of metabolic imaging and image quantification; 5. Bone scintigraphy in orthopedics and oncology and therapy of bone MTS; 6. Diagnostic proces in nuclear medicine, quality, indications, evaluation of examinations; 7. Nuclear cardiology and diagnostics of pulmonary diseases by radionuclide methods; 8. Nuclear medicine in endocrinology diagnostics and therapy and per operative detection; 9. Radionuclide diagnostics in oncology, diagnostic and therapy by RF – Teranostics; 10. Radionuclide diagnostics in nephrology specifics in diagnostics of children; 11. Nuclear medicine in gastroenterology diagnostics and therapy of liver tumors by RF; 12. Evidence based medicine in imaging – principles of method selections and interpretation; 13. Radionuclide methods in brain imaging. 14. Telemedicine in radiology and nuclear medicine and artificial intelligence in imaging - Radiomics

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> IK/O-V/22	<b>Course name:</b> Obesityology
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 0 / 1 <b>Per study period:</b> 0 / 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 9.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> IK/IP-V/15 and IK/PSM-V/22	
<b>Conditions for course completion:</b> For successful obtained of the credits from subject is necessary: - By completing the course, the student will understand the issues of obesity as a disease, the principle of etiopathogenesis, diagnosis and treatment options. The student will be able to evaluate a patient with obesity, recognizes the multidisciplinary nature of obesity as part of the metabolic syndrom and manage it. - To participate at all of practical exercises, theoretical and practical performance of all seminars,excused two absences. - To get at least 60 % of total score for ongoing review of written test and the theoretical training to practical exercises. - Evaluation: Study rules of procedure UPJŠ in Košice, the Faculty of Medicine, Part II, Art13 - the final classification includes the evaluation of the written test and the results obtained in practical exercises	
<b>Learning outcomes:</b> Case study processing - obtaining max. 10 points. The student demonstrates the ability to diagnose and treat through a clear and concise case report of an obese patient. The student submits the case report by the end of the 10th week of teaching. Epidemiology, etiology, diagnosis of obesity, communication with an obese patient, conservative treatment of obesity, surgical treatment of obesity - obtaining max. 10 points. Within the case study processing, the student will critically re-evaluate the proposed treatment model, his / her own originally proposed procedure, the form of communication based on evidence-based medicine and evaluate the strengths and weaknesses. The processing of the analysis is handed over at the end of the semester. Mandatory active participation in seminars - obtaining max. 10 points. Content standard : The student demonstrates knowledge and skills in the field of content, which is given by the content of the result of education and a wide range of recommended literature.	
<b>Brief outline of the course:</b> Epidemiology, etiology, diagnosis of obesity, temporal and professional approach to treatment. Conservative treatment of obesity based on four basic pillars: influencing dietary patterns, physical activity, cognitive-behavioral approach aimed at permanent lifestyle change and pharmacotherapy and / or bariatric surgery. The multidisciplinary nature of obesity issues based on evidence-based medicine.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> KMSM Šaca/OTNC-V/16	<b>Course name:</b> Ortopédia a traumatológia nohy a členka
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 0 / 2 <b>Per study period:</b> 0 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> 100% participation in practical exercises (seminars/operating room)	
<b>Learning outcomes:</b> Students will gain knowledge of the diagnosis and treatment of diseases, injuries and deformities of the foot and ankle. There is little space devoted to this issue generally, however it is a very frequent problem that not only surgeons, internists, diabetologists, but especially general practitioners treat this patients on a daily basis. The topics of flat foot, deformities of the forefoot (bunions, hammer toes), diabetic foot problems, complex reconstructions for ankle deformities and arthritis, congenital deformities and ankle sprains, ankle and foot fractures will be discussed. Students will become familiar with the examination of the foot and ankle, X-ray, CT diagnostics, with the principles of surgical and conservative treatment. We will emphasize sports injuries in the location of the foot and ankle, and arthroscopic surgery.	
<b>Brief outline of the course:</b> <ol style="list-style-type: none"> <li>1. Anatomy and functional biomechanics of the foot and ankle</li> <li>2. Examination of the foot and ankle</li> <li>3. forefoot deformities</li> <li>4. hindfoot deformities</li> <li>5. Diabetic foot and Charcot arthropathy</li> <li>6. foot and ankle arthritis</li> <li>7. Congenital defects of the foot and ankle</li> <li>8. Fractures of the foot and ankle</li> <li>9. Ligaments and tendon injuries of the foot and ankle</li> <li>10. Sports injuries of the foot and ankle, ankle arthroscopy</li> </ol>

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> KDaD/ PE-V3/22	<b>Course name:</b> Paediatrics 3
<b>Course type, scope and the method:</b> <b>Course type:</b> Practice / Controlled study hour <b>Recommended course-load (hours):</b> <b>Per week: Per study period:</b> 200s / 60s <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 10	
<b>Recommended semester/trimester of the course:</b> 11., 12..	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> KDaD/PE-V2/12 and NLK/NL-V2/22	
<b>Conditions for course completion:</b> 1. For successful completion of the practical exercises is required: - To participate at all of practical exercises, theoretical and practical performance of all exercises. - Active participation in work on the ward under the supervision of a teacher. - Two absences are allowed /justified/ 2. For successful obtained of the credits from subject is necessary: - Successful completion of the practical exercises - Practical exam – evaluation of the physical examination of the patient in written form evaluated (A-E) The teaching proces may alternatively take place in a distance mode, through MS teams platform.	
<b>Learning outcomes:</b> Teach students to work as a residents at the ward in hospital, lead them to work independently in both the practical procedures and differential-diagnostic thinking. Daily work at the ward includes taking history, physical examination, drafting diagnostic and treatment process. Students learn to operate with documentation, including admitting and releasing process, also reporting the patients to the head of department during main ward rounds. Each student has to participate on “a patient of the week” analysis.	
<b>Brief outline of the course:</b> Fever of unknown origin Alergological examination Cystic fibrosis Premature and hypotrophic newborn Diff. dg. of unconsciousness Diff. dg. of hypoglycemia Growth retardation Diff. dg. of polydipsia and polyuria Hematuria and proteinuria Adrenal cortex disorders	

ALTE and SIDS Sepsis in children Cardiopulmonary resuscitation Anaemia in children Thrombocytes disorders Dysrhythmias Endocarditis, myocarditis, pericarditis Inflammatory bowel disease Meningitis and encephalitis Diff. dg. of dyspnoe and chest pain Rheumatic diseases Lymphadenopathy Primary and secondary immunodeficiency Malnutrition and failure to thrive Solid tumors in children Congenital malformation of neural tube

<b>Conditions for course completion:</b> Prerequisite for registration: succesful completion of practical lessons from Pathological physiology I Prerequisite for completion: 2 credit tests, evaluation of knowledge and outputs in practival lessons (oral & written quizzes, presentations, 3 protocols, semestral work), 50% attendance in lectures, final exam	
<b>Learning outcomes:</b> Special pathophysiology presents the in-depth overview of the underlying celullar and/or systemic etiopathogenesis, symptomatology and principal diagnostic findings of the clinically most important diseases and syndromes arising from the alterations in all systems of the human body. The subject provides the integration of the pre-clinical skills for general medicine	
<b>Brief outline of the course:</b> 1. Congenital acquired heart disorders, Ischaemic heart disease & myocardial infarction, Atherosclerosis, arterial hypertension, Cardiac dysrrhythmias, Cardiomyopathies, Shock states, hypotension, collapse, venous disorders 2. Disorders of red cells (anemia), coagulopathies, vasculopathy disorders of the white cells, Leucaemias, Lymphomas 3. Obstructive & restrictive lung disorders (asthma, COPD), Respiratory failure, ARDS, Respiraotry dysrhythmias, Disorders of ventilation, perfusion, difusion 4. Motor & sensory disorders, Neuropathies & neuromuscular dis., Degenerative & demyelinating dis, Epilepsy, Pain, Cerebrovascular diseases, Higher nervous dysfunctions & dementia sy., Vegetative nervous disorders 5. Hypoth. – hypophyseal. disorders, Thyroid and parathyroid gland dysfunction, Supraren diorders, Diabetes mellitus and its acute a& chronic complications, Molecular principles of endocrine disorders 6. Acute & chronic renal failure, Glomerulopathies, Tubulopathies, Renovascular diseases, Kidney stones. Disorders of pharynx, esophagus, Peptic ulcer, Pancreatopathy - maldigestion, Liver and gall bladder disorders - icterus, hepatitis

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> KF/ ZFL/17	<b>Course name:</b> Philosophical Aspects of the Medical Practice, Basic Philosophy for Medical Doctors
<b>Course type, scope and the method:</b> <b>Course type:</b> Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 <b>Per study period:</b> 14 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 1., 2., 3., 4., 5., 6., 7., 8., 9., 10..	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> The students will be evaluated according to their activity in the classes. The condition to pass and to get the credits will be the final exam written during the last lesson of the semester, which will be in form of a short essay, where the basic knowledge and the skills received during the semester should be applied. In case of online courses, the final essay sent at the end of semester, will be evaluated.	
<b>Learning outcomes:</b> During the classes, the students of the medical sciences should be informed about the basic existential problems and extreme situations, which they can be facing during their medical practice, in the wider interdisciplinary context. This should be realized in discussion about an interconnection between the medical, the psychological, the philosophical and the anthropological view of the human being, of the patient, in consideration of the present globalized and multicultural society.	
<b>Brief outline of the course:</b> 1. Who or what is a human being? Different views of the human, 2. Human and the culture: language, science, art and religion, 3. Freedom and responsibility. Human being and the principal of responsibility, 4. Life, death and dying. The sense of the human life. Problem of suicide and of euthanasia, 5. Love as an answer on the questions of the human existence, 6. Happiness, the ways of seeking and finding it, 7. Pain and suffering, 8. Human dignity. Human being as a purpose itself.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> USBM/ SM-V/14	<b>Course name:</b> Social Medicine
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 1 / 2 <b>Per study period:</b> 14 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 3	
<b>Recommended semester/trimester of the course:</b> 4.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> 1. Participation in at least 10 practicals and participation in at least 3 lectures. 2. Successful presentation of the selected topic (minimum 20 points). 3. Successful completion of the final test (minimum 31 points). Last update: <a href="https://www.upjs.sk/app/uploads/sites/9/2022/11/USBM_UP_Pr-Cv_VL-1_SM_2022-03-16.pdf">https://www.upjs.sk/app/uploads/sites/9/2022/11/USBM_UP_Pr-Cv_VL-1_SM_2022-03-16.pdf</a> . Conditions for passing the course: Successful completion of the final exam. Final assessment (examination): presentation of the selected topic and final test.	
<b>Learning outcomes:</b> To provide students with evidence-based knowledge of selected health determinants with an emphasis on social determinants, behavioral determinants and health care, with the aim of gaining a deeper understanding of their positive and negative effects on individual and population health. After completing the course, students will better orient themselves in trends in the development of the population health status, become familiar with approaches to health and disease at the population level, with health care systems and current challenges in the field of health at the national, international and global level. They will know the main social causes and consequences of diseases and their importance in the process of effective diagnosis, treatment and follow-up care	
<b>Brief outline of the course:</b> Determinants of health: social, behavioral, and health care; Healthcare systems, healthcare organization and integrated care; Health promotion and protection; Disease prevention; Global health: urbanization, migration, population aging; Family, dysfunctional family, child abused and neglect syndrome, domestic violence; Health and social consequences of substance and non-substance addictions; Specifics of health and social care for persons with physical, sensory and mental disabilities; Specifics of health and social care for Roma, immigrants, elderly and terminally ill persons; Unemployment and homelessness as a health and social problem; Social assistance to persons in an unfavorable life situation. The current timetable for the given semester is published on the website of the Institute of Social and Behavioral Medicine: <a href="https://www.upjs.sk/lekarska-fakulta/ustav/socialna-a-behavioralna-medicina/vyucba/predmety/dr/">https://www.upjs.sk/lekarska-fakulta/ustav/socialna-a-behavioralna-medicina/vyucba/predmety/dr/</a>

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ÚTVŠ/ ŠALF 1/22	<b>Course name:</b> Sport 1
<b>Course type, scope and the method:</b> <b>Course type:</b> Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 <b>Per study period:</b> 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 1	
<b>Recommended semester/trimester of the course:</b> 1.	
<b>Course level:</b> I., I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> Condition for successful course completion: - active participation in line with the study rule of procedure and course guidelines - students must meet the requirements to 80%	
<b>Learning outcomes:</b> Sports activities in all their forms prepare university students for their further professional and personal life. A personal experience allows them to understand the importance of physical activity for life. Sports actively influence physical fitness and performance, help to maintain mental health, and improve the health of those engaged in sport. The skills and abilities acquired and improved during exercise, strengthen students' relationships toward physical activities and provide an opportunity to affect their near and the wider environment in a selected sport activity. Content standard: The student demonstrates relevant knowledge and skills in the field, which content is defined in the course syllabus and recommended literature. Performance standard: Upon completion of the course students meet the performance standard and: - acquire movement skills in a particular sport, basic skills and complex skills in sport games and swimming competency - increase the level of speed, endurance, power and agility, overall fitness and performance - can apply the exercises in practice, - can apply a specific health-oriented programme to target health problems - can apply acquired knowledge and skills in the sport development process and leisure time	
<b>Brief outline of the course:</b> Brief outline of the course: The Institute of physical education and sport at the Pavol Jozef Šafárik University offers 20 sports activities aerobics; aikido, basketball, badminton, body-balance, body form, bouldering, floorball, yoga, power yoga, pilates, swimming, fitness, indoor football, SM system, step aerobics, table tennis, chess, volleyball, tabata, cycling. Additionally, the Institute of physical education and sport at the Pavol Jozef Šafárik University offers winter courses (ski course, survival) and summer courses (aerobics by the sea, rafting on	

the Tisza River) with an attractive programme, sports competitions with national and international participation.

<b>Conditions for course completion:</b> Condition for successful course completion: - active participation in line with the study rule of procedure and course guidelines - students must meet the requirements to 80%	
<b>Learning outcomes:</b> Learning outcomes: Sports activities in all their forms prepare university students for their further professional and personal life. A personal experience allows them to understand the importance of physical activity for life. Sports actively influence physical fitness and performance, help to maintain mental health, and improve the health of those engaged in sport. The skills and abilities acquired and improved during exercise, strengthen students' relationships toward physical activities and provide an opportunity to affect their near and the wider environment in a selected sport activity. Content standard: The student demonstrates relevant knowledge and skills in the field, which content is defined in the course syllabus and recommended literature. Performance standard: Upon completion of the course students meet the performance standard and: - acquire movement skills in a particular sport, basic skills and complex skills in sport games and swimming competency - increase the level of speed, endurance, power and agility, overall fitness and performance - can apply the exercises in practice, - can apply a specific health-oriented programme to target health problems - can apply acquired knowledge and skills in the sport development process and leisure time	
<b>Brief outline of the course:</b> Brief outline of the course: The Institute of physical education and sport at the Pavol Jozef Šafárik University offers 20 sports activities aerobics; aikido, basketball, badminton, body-balance, body form, bouldering, floorball, yoga, power yoga, pilates, swimming, fitness, indoor football, SM system, step aerobics, table tennis, chess, volleyball, tabata, cycling.	

Additionally, the Institute of physical education and sport at the Pavol Jozef Šafárik University offers winter courses (ski course, survival) and summer courses (aerobics by the sea, rafting on the Tisza River) with an attractive programme, sports competitions with national and international participation.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ChK/ CHP-V/15	<b>Course name:</b> Surgery - Propedeutics
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 2 <b>Per study period:</b> 28 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 5	
<b>Recommended semester/trimester of the course:</b> 5.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> (UA/A-V2/22 or UA/A-V2/14) and UHE/HE-V2/17	
<b>Conditions for course completion:</b> I. For successful completion of the practical exercises / lectures is required: - To participate at all of practical and theoretical exercises (100%) / lectures (75%) - To get at least 60 % of total score for ongoing review of written test - Two absences are possible needed to be compensated II. For successful obtained of the credits from subject is necessary: - To gain the credit from practical exercises / lectures (paragraph 1 above) - The control tests are evaluated on the basis of the achieved number of points (%) - Evaluation: Study rules of procedure UPJŠ in Košice, the Faculty of Medicine, Part II, Art. 13, Paragraph 4 - The final exam consists of oral parts - To the exam bring the student's book with attendance - The final classification includes the evaluation of the written test and the results obtained in practical exercises	
<b>Learning outcomes:</b> Get knowledge from the basics of symptomatology and diagnostics of surgical diseases, using physical, laboratory and instrumental examination. Students will acquire basics of RTG diagnostics of acute abdomen and other RTG contrast examinations of gastrointestinal tract, thorax and skeletal injuries. Apprise principles of surgical procedures, preoperative care of the patient and postoperative care. The attention is focused on the basics of surgical thinking and scientific work in surgery.	
<b>Brief outline of the course:</b> Introduction to Surgery-propedeutic study. History development of surgery. Patient history and symptoms of surgical diseases and its value for establishment of proper diagnosis. Basic principles of clinical examination. Value of paraclinic examinations – lab.tests.X ray, CT, US, MRI, endoscopy and nuclear medicine techniques for improvement of clinical diagnosis in acute and chronic surgical diseases. Principles of antisepsis and sepsis. Desinfection and sterilisation in surgical ward and in all health care facilities. Preoperative management of the patient. Indications and contraindications for the operation. Basic operative procedures – terminology, classification, description. Shock in surgery. Shock in surgery. Basis methods of anaesthesia. Types of anaesthesia (anaesthesia, premedication, general anaesthesia, endotracheal anaesthesia). Postoperative care. General principles of postoperative care. Operative wounds, types of wounds, healing of wounds. Tromboembolism in surgery. Thrombophlebitis, phlebotrombosis, pulmonary embolism, air and fat embolism. Bleeding in surgery. Non- surgical diseases – cardiovascular, respiratory, metabolic,	

hepatocellular, renal, endocrine, neurologic, haemarological, ummunological in correlation to surgical procedure. Blood derivates and transfusions for urgent and elective surgery.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ChK/ CH-V1/22	<b>Course name:</b> Surgery 1
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 2 <b>Per study period:</b> 28 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 4	
<b>Recommended semester/trimester of the course:</b> 6.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ChK/CHP-V/15	
<b>Conditions for course completion:</b> 1. For successful completion of the practical exercises / lectures is required: - To participate at all of practical and theoretical exercises (100%) / lectures (75%) - To get at least 60 % of total score for ongoing review of written test - Two absences are possible needed to be compensated 2. For successful obtained of the credits from subject is necessary: - To gain the credit from practical exercises / lectures (paragraph 1 above) - The control tests are evaluated on the basis of the achieved number of points (%) - Evaluation: Study rules of procedure UPJŠ in Košice, the Faculty of Medicine, Part II, Art. 13, Paragraph 4 - The results of ongoing evaluations are included in the final classification	
<b>Learning outcomes:</b> Students gain basic information on diagnosis and treatment of surgical diseases of infectious origin. The outcome of the studies of trauma and war surgery is the acquiring the basic knowledge of injury causes and prevention, pointing out the peculiarities of war injuries. Important is the knowledge of open and closed wounds – students must master first aid as well as the basics of conservative and surgical treatment and its complications. Important is the knowledge of shock pathophysiology as well as its diagnosis and treatment. The aim in the field of plastic and replacement surgery is the knowledge of the possibilities in these fields as well as indications, preparation, transportation of a patient as well as a replacement to the corresponding department. The important part of the surgery is the gained knowledge in the field of post-surgical rehabilitation of patients. Significant are also the basics of dietetics of surgical patients with the possibilities of parenteral and enteral nutrition. Students master the basics of home parenteral nutrition all-in-one, taking into consideration the increasing number of patients also in Slovakia. Significant is the knowledge of the increasing importance of enteral nutrition everywhere in the post-surgical period where its usage is possible.	
<b>Brief outline of the course:</b> Surgical infection I., Surgical infection II., Injury, prevention of injuries, occupational and nonoccupational injury (categories of injuries, mass injury, disaster), Open injuries – types of open injuries. Wounds, types of wounds, healing of wounds. First aid, modalities of the treatment, Closed injuries – types of closed injuries. Fractures and dislocations. First aid. Conservative therapy.	

Speciality of military injuries and their management. Cardiovascular injury, Shock, pathogenesis of the shock. Manifestations of the shock, laboratory diagnostic methods, clinical symptoms and therapy. Failure of organs, Thermal and cold injuries, The basic problems and principles of plastic surgery, Basic principles of microsurgery and replantation surgery, Basic principles of transplantation surgery, Principles of rehabilitation of surgical patients, Principles of dietetics in surgical patients in pre- and post-operative period. Parenteral and enteral nutrition in surgical diseases.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ChK/ CH-V4/21	<b>Course name:</b> Surgery 4 (Trauma Surgery, Urology)
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 2 <b>Per study period:</b> 28 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 3	
<b>Recommended semester/trimester of the course:</b> 9.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ChK/CH-V3/17 and UFR/FA-V2/22	
<b>Conditions for course completion:</b> For successful completion of the practical exercises/lectures is required: - To participate at all of practical exercises (100%) and theoretical lectures (75%).	
<b>Learning outcomes:</b> Students will acquire knowledge of the diagnosis and treatment of traumatic brain injury and spinal cord injury often simultaneously with chest injuries. Also important are the knowledge acquired in the abdomen and retroperitoneal injury, especially for its relative rarity. Frequently occurring musculoskeletal injuries, which is important to proper diagnosis and treatment. The student has to know the life-threatening symptoms of compartment syndrome and other rarely occurring due to injuries / Crush syndrome, algodystrophic syndrome, etc. /. In the field of urology is the result of learning the knowledge of the occurrence of urogenital anomalies syndrome. It is important to gain knowledge about the relatively frequently occurring inflammatory diseases in this area. Students master the diagnosis and treatment of calculous disease of the urinary system. In terms of incidence of diseases of the prostate is a common disability - whether benign hyperplasia or tumors, thus acquiring knowledge about the disease is extremely important. Similarly, the student must control the symptoms and treatment of injuries of the urogenital system, although they occur less frequently.	
<b>Brief outline of the course:</b> Craniocerebral injury. Spinal injuries. Chest injury. Injury to the abdomen, pelvis and urogenital system. The injuries of the upper limb. Lower limb injuries. Specific types of injuries and injury complications. History, terminology and basic principles of examination in urology. Anomalies of the urogenital system. Inflammatory diseases of the urogenital system, epidemiology, etiopathogenesis, diagnostic principles. Urolithiasis - etiopathogenesis, diagnostic procedure, complications and prognosis. Tumors of the urogenital system. Benign prostatic hyperplasia. Injuries of the urogenital system.

<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ChK/ CH-V5/18	<b>Course name:</b> Surgery 5 (Neurosurgery, Orthopedics)
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 2 / 2 <b>Per study period:</b> 28 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 3	
<b>Recommended semester/trimester of the course:</b> 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ChK/CH-V3/17	
<b>Conditions for course completion:</b> 1. 100% active participation in practical exercises. 2. Passing the final test with a minimum of 60% success rate.	
<b>Learning outcomes:</b> Acquiring basic knowledge about the diagnosis and treatment of diseases and injuries of the locomotor system, central and peripheral nervous system in ORTHOPEDICS and NEUROSURGERY.	
<b>Brief outline of the course:</b> The student will learn the basic examination and imaging methods used in orthopedics and neurosurgery. Acquire knowledge and diagnostics, differential diagnosis and treatment of the most common diseases and injuries of the locomotor system, central and peripheral nervous system of children and adults falling within the competence of the field of orthopedics, respectively. neurosurgery. Orthopedics: examination and imaging methods in orthopedics; inflammatory and degenerative diseases of the musculoskeletal system; metabolic diseases; congenital diseases of the locomotor system; tumors of the musculoskeletal system; the most common orthopedic diseases of the upper and lower limbs; diseases of the axial skeleton; regenerative medicine in orthopedics; orthoses and prostheses; Neurosurgery: examination and imaging methods in neurosurgery; intracranial pressure – pathophysiology of intracranial hypertension; congenital defects of the nervous system; head injuries; injuries to the spine, spinal cord and peripheral nerves; tumors of the nervous system; vascular neurosurgery; pain and peripheral nerve compression syndromes.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ChK/ CH-V6/22	<b>Course name:</b> Surgery 6
<b>Course type, scope and the method:</b> <b>Course type:</b> Practice / Controlled study hour <b>Recommended course-load (hours):</b> <b>Per week: Per study period:</b> 280s / 60s <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 12	
<b>Recommended semester/trimester of the course:</b> 11., 12..	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b> ChK/CH-V5/18 and ChK/CH-V4/21 and KRO/RKO-V/22	
<b>Conditions for course completion:</b> 1. For successful completion of the practical exercises / seminars is required: - To participate at all of practical and theoretical exercises (100%) and seminars (75%) - To get at least 60 % of total score for ongoing review of written test last day of classes in ROGO system - Two absences are possible needed to be compensated 2. For successful obtained of the credits from subject is necessary: - To gain the credit from practical exercises (paragraph 1 above). - Written test last day of classes in ROGO system (30 questions) - To complete two night duties on Surgery Departments according to the schedule - Evaluation: Study rules of procedure UPJŠ in Košice, the Faculty of Medicine, Part II, Art. 13, Paragraph 4 - The final classification includes the evaluation of the written test and the results obtained in practical exercises In case of rotation abroad, is an obligation to complete the final test in Surgery 6 on the last day of the rotation in ROGO system with a confirmation of completion of rotation abroad	
<b>Learning outcomes:</b> After the completion of this part of the studies students shall master basic diagnostic, therapeutic and evaluative outcomes in the field of thoracic and mediastinum surgery. They must know the basics of diagnosis and treatment of acute abdomen including abdominal traumas. The important knowledge includes that of the transportation of the sick and injured in shock or those unconscious or when spinal injury is suspected. They must master first aid, including the medical one, in case of thermal damages of organisms. They will acquire the basic knowledge from cardiovascular surgery as well as pediatric surgery. They will master the basics of resuscitation and intensive care. They will know the basic diagnostic and therapeutic procedures in onco-surgery. They will know the basics of diagnostic and therapeutic procedures in orthopedics, urology and neurosurgery. They are able to diagnose basic diseases of the given fields based on the X-ray interpretation.	
<b>Brief outline of the course:</b> Multidisciplinary seminars: Thoracic and mediastinum surgery. Acute abdomen. Trauma surgery. Principles of the transportation of the sick and injured in shock, unconscious, or in case of spinal injury. Burns. Cardiovascular surgery. Pediatric surgery. Resuscitation and intensive care. Onco-surgery. Orthopedics, urology, neurosurgery + X-rays.

## COURSE INFORMATION LETTER

<b>University:</b> P. J. Šafárik University in Košice	
<b>Faculty:</b> Faculty of Medicine	
<b>Course ID:</b> ChK/ TOT-V/15	<b>Course name:</b> The Organ and Tissue Transplantation
<b>Course type, scope and the method:</b> <b>Course type:</b> Lecture / Practice <b>Recommended course-load (hours):</b> <b>Per week:</b> 0 / 2 <b>Per study period:</b> 0 / 28 <b>Course method:</b> present	
<b>Number of ECTS credits:</b> 2	
<b>Recommended semester/trimester of the course:</b> 10.	
<b>Course level:</b> I.II.	
<b>Prerequisites:</b>	
<b>Conditions for course completion:</b> 1. For successful completion of the practical exercises/seminars is required: - To participate at all of practical exercises (100%) - Elaboration of specified tasks 2. For successful obtained of the credits from subject is necessary: - To gain the credit from practical exercises (paragraph 1 above). - Evaluation: Study rules of procedure UPJŠ in Košice, the Faculty of Medicine, Par II, Art13 - The final classification includes the evaluation of the written test and the results obtained in practical exercises	
<b>Learning outcomes:</b> The students will acquire basic knowledge on the theory of biology and transmission organs and tissues. They will know the principle donors of organs, brain death determination and the principle of selection of suitable recipients. The students will acquire knowledge of the techniques of collection, storage and transportation of the tissues and organs, the basic principles of organ and tissue transplantation. They will know the possibilities of the products of The Tissue Banks.	
<b>Brief outline of the course:</b> General principles of transplantation of organs and tissues. Indications for explant organs from deceased donors. Indications for the explant organs from living donors. Kidney transplantation. Kidney transplantation in children. Pancreas transplantation. Liver transplantation. Heart transplantation. Lung transplantation. Transplantation of the small intestine. Combined and re-transplantation. Complications after transplant surgery. Organ rejection, acute and chronic. Stem cell transplantation in surgery.
