COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚCHV/ NMR1/00	Course name: 1D & 2D NMR Spectroscopy
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 3 Per study period: 28 / 42 Course method: present	
Number of ECTS credits: 6	
Recommended semester/trimester of the course: 2.	
Course level: II.	
Prerequisites:	
Conditions for course completion: <ol style="list-style-type: none"> 1. Attendance at lectures and seminars (this also applies to the online form of teaching) 2. Activity at seminars (also applies to the online form of teaching) - theoretical preparation of students for all seminars is required 3. Elaboration of written assignments (20% of the total evaluation) according to the teacher's instructions. 4. Passing the final test (30% of the total evaluation). 5. Exam (written 25% and oral part 25%). 	
Learning outcomes: The aim of the course is to get acquainted with 1D and 2D NMR methods and the application of the acquired knowledge in solving NMR problems.	
Brief outline of the course: <ol style="list-style-type: none"> 1. Advanced 1D NMR methods <ol style="list-style-type: none"> a) ¹³C NMR experiments – APT, DEPT b) NOE experiments c) Selective experiments 2. 2D NMR methods <ol style="list-style-type: none"> a) Proton-proton correlation through coupling – COSY, TOCSY b) Proton-proton correlation through space - NOESY c) Proton-carbon correlation – HSQC/HMQC/HETCOR, HMBC, H2BC, EXSIDE d) Carbon-carbon correlation - INADEQUATE 	
Recommended literature: <ol style="list-style-type: none"> 1. H. Friebolin: Basic One- and Two-Dimensional NMR Spectroscopy, 5. Ed., Wiley, 2010. 2. T. D. W. Claridge: High-Resolution NMR Techniques in Organic Chemistry, 5. Ed., Elsevier, 2016. 3. Atta-ur-Rahman, M. I. Choudhary: Solving Problems with NMR spectroscopy, Academic Press 1996. 	
Course language: english	

Notes:

Teaching is carried out in person or, if necessary, online using the MS Teams or BBB (BigBlueButton) tool. The form of teaching is specified by the teacher at the beginning of the semester, updated continuously.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice					
Faculty: Faculty of Science					
Course ID: ÚCHV/APO1/02		Course name: Analysis of Psychotropic and Narcotic Substances			
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present					
Number of ECTS credits: 4					
Recommended semester/trimester of the course: 3.					
Course level: II.					
Prerequisites:					
Conditions for course completion: Examination					
Learning outcomes: Survey of classification, effects/mechanism and properties of psychotropic and narcotic substances, drug dependences and methods used in the (toxicological) analysis of drugs.					
Brief outline of the course: Drug, drug dependence. Psychotropic and narcotic substances - classification, properties and laws. Dose and tolerance, therapy, prevention. Pharmacokinetics of the drug. Biological effects, biotransformations, receptors. The methods used in the analysis of the drugs (clinical, forensic analysis) - opiates, cocaine, amphetamines and their analogues, hallucinogenics, cannabis products, etc.					
Recommended literature: 1. M. D. Cole: The Analysis of Controlled Substances, Wiley 2003. 2. E. Hodgson: A Textbook of Modern Toxicology, Wiley 2004.

Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 1 Per study period: 28 / 14 Course method: present	
Number of ECTS credits: 5	
Recommended semester/trimester of the course:	
Course level: II.	
Prerequisites:	
Conditions for course completion: Assessment, based on 3 prepared presentations on specified topics (3x10 points), a minimum of 20 points is required for completion.	
Learning outcomes: Survey of basic principles, methods and new trends in drugs analysis.	
Brief outline of the course: Analysis of chemical drugs, control and evaluation of drug quality, Slovak and European Pharmacopoeia. Determination of drug content, classical methods of determination - proof reactions of ions, etc. Solid state drug analysis, impurity analysis, drug degradation, stability study. Sample preparation, cleaning and extraction procedures. Methods used in drug analysis, optical and separation methods. Validation of analytical methods

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚCHV/ ACHSP/14/15	Course name: Analytical Chemistry
Course type, scope and the method: Course type: Recommended course-load (hours): Per week: Per study period: Course method: present	
Number of ECTS credits: 4	
Recommended semester/trimester of the course:	
Course level: II.	
Prerequisites:	
Conditions for course completion:	
Learning outcomes:	
Brief outline of the course: Sampling and processing in analytical chemistry, basic rules of sampling. Representative sample, homogeneous sample. Sample pretreatment, selection of analytical method. Types of chemical equilibria in solutions. Protolytic equilibria. Oxidation-reduction equilibria. Precipitation equilibria. Complex-forming equilibria. Use of analytical reaction in quantitative analysis. Methods of suppressing adverse reactions. Masking in analytical chemistry. Basic principles and classification of separation methods. Extraction, principle, classification of extraction methods and their use in sample preparation - LLE, SPE, SPME, etc. Basic principles of chromatography, general description of chromatographic process. Qualitative and quantitative analysis in chromatography. Principles of chromatographic separation in gas chromatography (GC). Theoretical bases of liquid chromatography (LC). Gel permeation chromatography (GPC), ion exchange chromatography (IEC), supercritical fluid chromatography (SCF), principles and applications. UPLC versus HPLC. Electromigration methods, principle, classification and their use. Principles of the most important instrumental analytical methods. Electrochemical analytical methods, typical applications. Voltammetric methods, potentiometric methods, coulometry. Electrochemical dissolution analysis. Electrochemical detectors in flow systems. Spectral analytical methods. Atomic and molecular spectroscopy: Principles, division. Atomic spectra, origin, analytical use. Basic differences in emission and absorption methods. Excitation sources. Radiation decomposition. Radiation detection. Matrix effects and their elimination. Implementation of analytical calibration. Atomic absorption spectrometry. Molecular spectrophotometry - UV/VIS, IR, MS. Thermal analysis. Fundamentals of mathematical and statistical methods used in analytical chemistry. Probability distribution of measurement results, classical and robust estimates of mean and variance. Statistical tests and their application. Accuracy, precision, and reliability of results. Calibration in analytical chemistry, linear and nonlinear models.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚCHV/ ANCH2/06	Course name: Analytical Chemistry III.
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present	
Number of ECTS credits: 6	
Recommended semester/trimester of the course: 1.	
Course level: II.	
Prerequisites:	
Conditions for course completion: Active participation in seminars. Test.	
Learning outcomes: Advanced knowledge of modern analytical chemistry.	
Brief outline of the course: Analytical chemistry. Objects of analysis. Instrumental equipment of a modern analytical laboratory. Relationship between analytical chemistry and other scientific branches. Problems and trends in recent analytical chemistry. Speed and factors affecting the speed of analysis. Validation of analytical methods. Non-destructive methods of analysis, principle, utility. Distance analysis. Automation of analysis, examples. Flow analysis – FIA and SIA. Analytical reaction, chemical equilibrium in solutions. Kinetic analytical methods. Radiochemical analytical methods. Secondary Ion Mass Spectrometry. X-ray Photoelectron spectrometry. Mass spectrometry. Roentgen spectroscopic methods.	
Recommended literature: 1. Willard H.H., Merritt L.L., Dean J.A., Settle F.A.: Instrumental Methods of Analysis, Wadsworth Publ. Co., Belmont (CA) 1988. 2. Christian G.D.: Analytical Chemistry. COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚCHV/ AAS1/03	Course name: Atomic Spectrochemistry
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present	
Number of ECTS credits: 6	
Recommended semester/trimester of the course: 1.	
Course level: II.	
Prerequisites:	
Conditions for course completion: Based on the ongoing evaluation: it means based on the results of laboratory exercises and seminar works with an assessment higher than 51%. Based on ongoing evaluation, and the final written and oral examination. The exam consists of a written and an oral part and its overall percentage rating must be higher than 51%. (Written and oral exam evaluation: 51-60% - E; 61-70% - D; 71-80% - C; 81-90% - B; 91-100% - A).	
Learning outcomes: After completing the subject, the student will acquire theoretical information and practical experience in the field of spectro-analytical methods.	
Brief outline of the course: Information and the role of atomic absorption and emission spectroscopy in analytical chemistry. History of the development of spectral methods. Theoretical foundations, principles and classification of optical methods. Experimental foundations of spectral methods. Atomic absorption spectrometry. Atomic emission spectrometry. Atomic fluorescence spectrometry. X-ray spectrometry. Inorganic mass spectrometry. Molecular absorption spectrometry in the visible, ultraviolet and near-infrared region and its analytical applications.	
Recommended literature: I. Němcová, L. Čermáková, P. Rychlovský: Spektrometrické analytické metody. Karolinum, Praha, 1997. D. A. Skoog, J. J. Leary: Instrumental Analytics. Springer, Berlin, 1996. B. Welz, M. Sperling: Atomic Absorption Spectrometry, Wiley-VCH, Weinheim, 1998. H. Günzler, A. Williams: Handbook of Analytical Techniques. Wiley-VCH, Weinheim, 2001. G. Gauglitz, T. Vo-Dinh: Handbook of Spectroscopy. Wiley-VCH, Weinheim, 2003.	
Course language: Slovak language	
Notes:	

Theoretical part of the course can also be carried out by distance learning, using MS Teams or BBB. The form of teaching is always specified at the beginning of the semester, and is continuously updated in accordance with the pandemic situation.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚCHV/ ZEM/21	Course name: Basics of electroanalytical methods
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 1 Per study period: 28 / 14 Course method: present	
Number of ECTS credits: 5	
Recommended semester/trimester of the course: 2., 4.	
Course level: II.	
Prerequisites:	
Conditions for course completion: Active participation in laboratory exercises and seminars; successful completion of the tests. 1. Participation in laboratory exercises is required. Assigned teacher who leads exercises justifying the student's absence (incapacity for work, family reasons, etc.) for a maximum of two exercises during the semester without substitute supplying. The assigned teacher, who leads the seminar, assesses the preparation of students and their activity in seminars. The student is obliged to prepare a protocol from each laboratory exercise resp. assignment determined by the teacher. Written test. 2. Elaboration of 2 written assignments (or subject project), which will be one of the conditions for participation in the exam. 3. Successful completion of the final written test. The evaluation of the student's study results within the study of the subject is carried out by a combination of continuous control during the teaching part of the semester (50%) with an examination during the examination period (50%). To complete the course it will be necessary to achieve at least 51% of the total evaluation. Note: Detailed conditions are updated annually within the repository for digital support materials (LMS UPJŠ).	
Learning outcomes: Getting information about the electroanalytical methods and application in laboratory practice.	
Brief outline of the course: Principle of electroanalytical methods. Electrodes. Potentiometry. Voltammetry. Polarography. Linear and cyclic voltammetry. Pulse voltammetry. Stripping voltammetry. Voltammetric titrations. Amperometry and titrations with polarizable electrodes. Coulometry. Potentiostatic coulometry. Coulometric titrations. Conductometry. Chronopotentiometry. Electroanalytical measurements in flow systems. Miniaturization of electrochemical analytical methods. Selected applications of electroanalytical methods as quality control in the analysis of technological products, in bioanalytical applications, analysis of foreign substances in the environment, in diagnostic and clinical analysis, in forensic science, etc.	
Recommended literature: 1. J. Labuda a kol. Analytická chémia, STU, Bratislava 2014.

Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 1 Per study period: 28 / 14 Course method: present	
Number of ECTS credits: 5	
Recommended semester/trimester of the course: 1.	
Course level: II.	
Prerequisites:	
Conditions for course completion: Completion of block exercises. Processing and presentation of the assigned topic. Oral examination.	
Learning outcomes: Theoretical knowledge and practical experience regarding application of analytical chemistry and analytical methods to laboratory medicine.	
Brief outline of the course: Introduction to Bioanalytical Chemistry, biological samples classification. Factors affecting analytes in biological samples. Collection, transport and storage of biological samples. Selected procedures of sample pretreatment Control and management of quality in clinical laboratory. Enzymes in bioanalysis. Introduction to Immunochemical methods - basic characteristics of the immune system, antibody, antigen, hapten - definition, basic characteristics. Precipitation and Agglutination methods - principle, definition, use. Immunodiffusional methods. Radioimmunoanalytic methods (RIA). Nonisotopic methods (EIA, ELISA, LIA, FIA). Investigative procedures in medical microbiology. Principles miniaturization of analytical procedures in clinical chemistry, microchips, nanochips, sensors and biosensors.

Course ID: ÚCHV/ ACM1/06	Course name: Chemometrics
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present	
Number of ECTS credits: 6	
Recommended semester/trimester of the course: 2.	
Course level: II.	
Prerequisites:	
Conditions for course completion: On the basis of ongoing evaluation, which requires the elaboration of homeworks and seminar works, and a final written project with an assessment higher than 51%. On the basis of ongoing evaluation, and final examination. The exam consists of a written and an oral part and its overall percentage rating must be higher than 51%. (Written and oral exam evaluation: 51-60% - E; 61-70% - D; 71-80% - C; 81-90% - B; 91-100% - A).	
Learning outcomes: After completing the course, the student will acquire knowledge about the correct and theoretically based evaluation of analytical results and methods. Knowledge about the methods of validation and accreditation of laboratories. Knowledge about the result uncertainties, methods of decision statistics and good laboratory practice.	
Brief outline of the course: The principles of the mathematic- statistical methods used in analytical chemistry. Probability distribution of the measuring results. Classic and robust estimation of the mean value and variance. Statistical tests and their application. Accuracy, precision, and reliability of the results. Uncertainty of the results. Calibration in the analytical chemistry, linear and nonlinear models. Evaluation of the analytical methods, the chosen optimization approaches. Solving of the typical examples in the frame of the practical lectures.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: KPPaPZ/KK/07	Course name: Communication and Cooperation
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 3.	
Course level: II.	
Prerequisites:	
Conditions for course completion: Evaluation: A condition for student evaluation is his active participation in the seminar. It is expected that the student will actively participate in the discussions and will express their positions and possible solutions. The output for evaluation will be the development of a project in the form of a Power Point presentation or a video on a selected communication topic.	
Learning outcomes: The goal of the subject Communication, cooperation is the formation and development of students' language and communication skills through experiential activities. The student can demonstrate an understanding of individual behavior in various communication contexts. The student can describe, explain and evaluate communication techniques (cooperation, assertiveness, empathy, negotiation, persuasion) in practical contexts. The student can apply these techniques in common communication schemes.	
Brief outline of the course: Communication Communication theory Non-verbal communication and its means Verbal communication (basic components of communication, language means of communication) about active listening Empathy Short conversation and effective communication (principles and principles of effective communication) Cooperation About the basics of cooperation About types, signs, types and factors of cooperation Characteristics of the team (positions in the team) Small social group (structure, development, characteristics of a small social group, position of the individual in the group)	

About leadership (characteristics of the leader, management, leadership styles)

Conditions for course completion: Written control test. Written examination.					
Learning outcomes: Basic principles of electromigration techniques and their application in practise.					
Brief outline of the course: Principles and classification of electromigration techniques - Zone electrophoresis, The moving boundary method, Focusing methods, Capillary isotachopheresis (cITP), Micellar electrokinetic chromatography (MEKC). Capillary zone electrophoresis (CZE). Principle of separation in an electric field, the phenomena accompanying separation in an electric field - electroosmotic pressure, Joule heat, diffusion, gravity, adsorption, instrumentation, detection, qualitative and quantitative analysis, electrophoretic separation on a microchip. Electrophoresis of nucleic acid, Elektrophoresis of serum proteins					
Recommended literature: 1. Handbook of Capillary Electrophoresis, 2nd Ed., CRC, Boca Raton, 1997 2. P. Boček: Basic course and Advanced course of Isotachopheresis, Institute of Analytical Chemistry, Czech Academy of Science, Brno, 1984

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚCHV/ AZP1/04	Course name: Environmental Analytical Chemistry
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present	
Number of ECTS credits: 6	
Recommended semester/trimester of the course: 1., 3.	
Course level: II.	
Prerequisites:	
Conditions for course completion: Active participation in laboratory exercises and seminars; successful completion of the final test. Elaboration of 2 written assignments (or subject project), which will be one of the conditions for participation in the exam. The evaluation of the student's study results within the study of the subject is carried out by a combination of continuous control during the teaching part of the semester (50%) with an examination during the examination period (50%). Note: Detailed conditions are updated annually within the repository for digital support materials (LMS UPJŠ).	
Learning outcomes: The student acquires knowledge of the methods of environmental analysis.	
Brief outline of the course: Components of the environment: hydrosphere, lithosphere, atmosphere. Analytical methods used in the analysis of environmental samples. Choice of analytical method. Advantages and disadvantages of field methods. Sampling and sample preparation in environmental analysis. Chemical treatment of solid samples. Quality assurance system in environmental analysis laboratories. Good laboratory practice and accreditation of analytical laboratories. Analysis of water, soil, ores, sediments, air and food. Use of spectral, separation and electrochemical methods in environmental analysis. Automatic monitoring. Environmental monitoring.	
Recommended literature: 1. Tölgyessy J. a kol. Chémia, biológia a toxikológia vody a ovzdušia. Bratislava, VEDA, 1984. 2. A.M. Ure, C.M. Davidson, Chemical Speciation in the Environment. Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: 6 Per study period: 84 Course method: present					
Number of ECTS credits: 6					
Recommended semester/trimester of the course: 3.					
Course level: II.					
Prerequisites:					
Conditions for course completion: The supervisor of the diploma thesis evaluates the student's experimental work individually every week and at the end of the semester.					
Learning outcomes: Acquisition of experimental methods necessary for the successful solution of the diploma thesis.					
Brief outline of the course: Technique of experimental methods, including the use of devices needed to solve the thesis. The use of experimental instrumentation techniques in the elaboration of a diploma thesis, focusing on work with spectral and chromatographic methods used in the characterization of the structure of synthesized organic compounds. Practical application of these methods.					
Recommended literature: Current journal literature. Chemical online databases.					
Course language: Slovak, english					
Notes: Teaching is carried out full-time or part-time, using the BBB platform (BigBlueButton) or MS Teams. The form of teaching is specified by the teacher at the beginning of the semester and continuously updated.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚCHV/ SKACH1/06	Course name: Forensic and Clinical Analytical Chemistry
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 1 Per study period: 28 / 14 Course method: present	
Number of ECTS credits: 5	
Recommended semester/trimester of the course:	
Course level: II.	
Prerequisites:	
Conditions for course completion: Elaboration and presentation of a seminar work with an assigned topic. Written examination.	
Learning outcomes: Application of analytical methods in criminology and forensic medicine.	
Brief outline of the course: Criminology section: basic principles and definition of subject. Basic criminalistic categories. Criminalistic track. Criminalistic technology. Criminalistic methods, resources, procedures and operations. Introduction to forensic chemistry. Chemical, physical and physicochemical methods of research tracks and material evidence. Dactyloscopy. Methods of individual identification of persons. Toxicological part: definition, classification and role of toxicology. Separation methods used in toxicology. Definition of poison. Pharmacokinetics and metabolism. Absorption, distribution, metabolism and elimination. Nox accumulation in the body. Biotransformation of noxy, biotransformation reactions. Poisoning, overdose, toxic levels, nox interaction. General approaches to the treatment of acute poisoning. Laboratory diagnostics of poisoning, drug abuse, sample selection, detection limits and time detection window. Development trends in toxicology - current toxicological methods - advantages and limitations.

Note: Detailed conditions are updated annually within the repository for digital support materials (LMS UPJŠ).	
Learning outcomes: The student acquires knowledge of the hydrochemistry.	
Brief outline of the course: European Water Charter. Water consumption. Water supplies. Water cycle in nature. Basics of water chemistry. Water sampling methods. Water analysis strategy. Methods of chemical analysis of water. Test method in water analysis. Automatic monitoring stations and sensors. Physical properties of water. Classification of substances present in natural waters. Types of natural waters and their characteristics. Water quality monitoring in Slovakia. Surface waters, their classification, chemical composition and properties. Pollution and analysis of surface waters. Sediments, their composition and analysis. Mutual influence of waters and sediments. Groundwater, their classification, chemical composition and properties. Groundwater pollution and analysis. Drinking water. Drinking water quality requirements. Physical, sensory and chemical indicators of drinking water quality. Analytical methods used in the analysis of drinking water. Domestic hot water preparation and requirements for its quality. Mineral waters, their classification, chemical composition, properties and analysis. Wastewater, their classification, chemical composition, properties and analysis. Sea water.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: KF/ FMPV/22	Course name: Methodology of Science 1
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course:	
Course level: II.	
Prerequisites:	
Conditions for course completion: Attendance: A student may have one unexcused absence in seminar at the most. Absence in more than one seminar must be reasoned and substituted by consultations. Conditions of continuous and final control: during the semester a student is continuously checked and assessed according to his/her activity. To be awarded the credits, a student must pass a test from knowledge obtained in the lectures and seminars. Results of the test will make up the final grade.	
Learning outcomes: The course is aimed at getting familiar with the basic issues of methodology and philosophy of science. Significant part will be devoted to presenting the main concepts of the philosophy of science in the 20th century and this aim will be achieved by reading the source and interpretive texts.	
Brief outline of the course: <ul style="list-style-type: none"> • Falsificationism and critical realism by K. R. Popper. • Development and critique of the Popper's concept. • Understanding the science development in the work by T. S. Kuhn. • Methodology of scientific research programmes of I. Lakatos. • Methodological anarchism of P. Feyerabend. • W.V.O. Quine – the issue of relation between theory and empiricism.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚCHV/ MOL/06	Course name: Molecular Spectrometry
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present	
Number of ECTS credits: 6	
Recommended semester/trimester of the course: 2.	
Course level: II.	
Prerequisites:	
Conditions for course completion: Active participation in laboratory exercises and seminars; successful completion of the tests. 1. Participation in laboratory exercises is required. Assigned teacher who leads exercises justifying the student's absence (incapacity for work, family reasons, etc.) for a maximum of two exercises during the semester without substitute suppling. The assigned teacher, who leads the seminar, assesses the preparation of students and their activity in seminars. The student is obliged to prepare a protocol from each laboratory exercise resp. assignment determined by the teacher. Written test. 2. Elaboration of 2 written assignments (or subject project), which will be one of the conditions for participation in the exam. 3. Successful completion of the final written test. The evaluation of the student's study results within the study of the subject is carried out by a combination of continuous control during the teaching part of the semester with an examination during the examination period. To complete the course it will be necessary to achieve at least 51% of the total evaluation. Note: Detailed conditions are updated annually within the repository for digital support materials (LMS UPJŠ).	
Learning outcomes: Advanced theoretical and practical knowledge of the modern methods of molecular spectroscopy.	
Brief outline of the course: Molekular spectrophotometry (Ultra-Violet, Visible, Infrared) for Chemical Analysis. Fourier Transform Infrared. Raman spectrometry. Microwave spectrometry. Electron Paramagnetic Resonance. Nuclear Magnetic Resonance.	
Recommended literature: 1. L.Koller. Analytická chémia. TU Košice 2002. 2. S.Miertuš a kol. Atómová a molekulová spektroskopia. Alfa. Bratislava. 1991. 3. E.D.Olsen. COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚTVŠ/ ÚTVŠ/CM/13	Course name: Seaside Aerobic Exercise
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course:	
Course level: I., II.	
Prerequisites:	
Conditions for course completion: Completion: passed Condition for successful course completion: - active participation in line with the study rule of procedure and course guidelines - effective performance of all tasks- aerobics, water exercise, yoga, Pilates and others	
Learning outcomes: Content standard: The student demonstrates relevant knowledge and skills in the field, which content is defined in the course syllabus and recommended literature. Performance standard: Upon completion of the course students are able to meet the performance standard and: - perform basic aerobics steps and basics of health exercises, - conduct verbal and non-verbal communication with clients during exercise, - organise and manage the process of physical recreation in leisure time	
Brief outline of the course: Brief outline of the course: 1. Basic aerobics – low impact aerobics, high impact aerobics, basic steps and cuing 2. Basics of aqua fitness 3. Basics of Pilates 4. Health exercises 5. Bodyweight exercises 6. Swimming 7. Relaxing yoga exercises 8. Power yoga 9. Yoga relaxation 10. Final assessment Students can engage in different sport activities offered by the sea resort – swimming, rafting, volleyball, football, table tennis, tennis and other water sports in particular.

Conditions for course completion: Active participation in seminars; successful completion of the final test. Elaboration of 2 written assignments (or subject project), which will be one of the conditions for participation in the exam. The evaluation of the student's study results within the study of the subject is carried out by a combination of continuous control during the teaching part of the semester (50%) with an examination during the examination period (50%). Note: Detailed conditions are updated annually within the repository for digital support materials (LMS UPJŠ).					
Learning outcomes: The student will expand the knowledge acquired in the field of analytical chemistry during bachelor's studies.					
Brief outline of the course:					
Recommended literature: 1. Current scientific literature.					
Course language: Slovak					
Notes: The course is implemented by full-time or, if necessary, distance method using the MS Teams or BBB or a combined method. The form of teaching is specified by the teacher at the beginning of the semester and updated continuously.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚCHV/SP1/14	Course name: Semestral Project I
Course type, scope and the method: Course type: Recommended course-load (hours): Per week: Per study period: Course method: present	
Number of ECTS credits: 4	
Recommended semester/trimester of the course: 1.	
Course level: II.	
Prerequisites:	
Conditions for course completion: Elaboration and submission of a semester project based on the assignment of the teacher. Its content is an independent search of scientific information in scientometric databases, subsequent study of original papers, its processing and presentation of the results of literare search. After a successful presentation and answering any comments, the teacher will give the evaluation "completed".	
Learning outcomes: Mastering the independent and creative processing of the assigned topic using the latest scientific literature.	
Brief outline of the course: WoS and Scopus scientific databases, resp. other, by the teacher suggested, accessible databases. Ways to search these databases. Specific search accodring to the assignement of the teacher. Selection of obtained results. Finding relevant original articles. Study of selected papers. Processing of obtained information into presentation. Presentation of the results.	
Recommended literature: WoS and Scopus scientific databases, Science direct and other accessible websites of scientific literature publishers. Current scientific papers.	
Course language: Slovak, English.	
Notes:

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚTVŠ/ TVa/11	Course name: Sports Activities I.
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 1.	
Course level: I., II.	
Prerequisites:	
Conditions for course completion: Min. 80% of active participation in classes.	
Learning outcomes: Sports activities in all their forms prepare university students for their professional and personal life. They have a great impact on physical fitness and performance. Specialization in sports activities enables students to strengthen their relationship towards the selected sport in which they also improve.	
Brief outline of the course: Brief outline of the course: The Institute of physical education and sport at the Pavol Jozef Šafárik University offers 20 sports activities aerobics; aikido, basketball, badminton, body-balance, body form, bouldering, floorball, yoga, power yoga, pilates, swimming, fitness, indoor football, SM system, step aerobics, table tennis, chess, volleyball, tabata, cycling. Additionally, the Institute of physical education and sport at the Pavol Jozef Šafárik University offers winter courses (ski course, survival) and summer courses (aerobics by the sea, rafting on the Tisza River) with an attractive programme, sports competitions with national and international participation.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚTVŠ/ LKSp/13	Course name: Summer Course-Rafting of TISA River
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course:	
Course level: I., II.	
Prerequisites:	
Conditions for course completion: Completion: passed Condition for successful course completion: - active participation in line with the study rule of procedure and course guidelines - effective performance of all tasks: carrying a canoe, entering and exiting a canoe, righting a canoe, paddling	
Learning outcomes: Content standard: The student demonstrates relevant knowledge and skills in the field, which content is defined in the course syllabus and recommended literature. Performance standard: Upon completion of the course students are able to meet the performance standard and: - implement the acquired knowledge in different situations and practice, - implement basic skills to manipulate a canoe on a waterway, - determine the right spot for camping, - prepare a suitable material and equipment for camping.	
Brief outline of the course: Brief outline of the course: 1. Assessment of difficulty of waterways 2. Safety rules for rafting 3. Setting up a crew 4. Practical skills training using an empty canoe 5. Canoe lifting and carrying 6. Putting the canoe in the water without a shore contact 7. Getting in the canoe 8. Exiting the canoe 9. Taking the canoe out of the water 10. Steering a) The pry stroke (on fast waterways) b) The draw stroke	

11. Capsizing 12. Commands

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚCHV/ ATV1/04	Course name: Water Pretreatment
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present	
Number of ECTS credits: 6	
Recommended semester/trimester of the course:	
Course level: II.	
Prerequisites:	
Conditions for course completion: Active participation in laboratory exercises and seminars; successful completion of the final test. Elaboration of 2 written assignments (or project), which will be one of the conditions for participation in the exam. Written test (50%) and oral examination (50%) during the examination period. Participation in excursions to the municipal wastewater treatment plant and drinking water treatment plant. Note: Detailed conditions are updated annually within the repository for digital support materials (LMS UPJŠ).	
Learning outcomes: The student acquires knowledge of the methods of water pretreatment.	
Brief outline of the course: Classification of technological processes of water treatment according to phase processes, nature of the process, quality of treated water. Selection of resources for the supply of the population. Requirements for the treatment process. Water purification. Coagulation. Influence of various factors on coagulation. Water disinfection. Water fluoridation. Water softening methods. Water demineralization. Methods for removing Fe and Mn. Drinking water treatment plant. Scheme. Brief characteristics of individual stages of adjustment. Technological schemes and equipment. Composition and properties of wastewater. Wastewater classification. Classification of industrial wastewaters. Stages of industrial wastewater treatment. Municipal wastewater treatment plant. Scheme. Technological process of wastewater treatment. Brief characteristics of individual stages. Technological schemes and equipment.
