COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice

Faculty: Faculty of Science

Course ID: ÚINF/ PfMRI/19	Course name: Advanced fMRI data Analysis

Course type, scope and the method:
Course type: Lecture **Recommended course-load (hours):** **Per week:** 3 **Per study period:** 42 **Course method:** present

Number of ECTS credits: 9

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion: Midterm exam. Project Final exam consisting of written and/or oral part.

Learning outcomes: Skills necessary for application of advanced computational tools to fMRI data analysis.

Brief outline of the course: 1. Advanced GLM modeling 2. Intro to machine learning 3. Multi-voxel Pattern Analysis: A neuroscientific perspective 4. Multi-voxel pattern analysis v/s Univariate 5. CosmoMVPA toolset 6. Split half correlation analysis 7. Search Light analysis 8. SVM and other classifiers

Recommended literature: Oosterhof, N. N., Connolly, A. C., and Haxby, J. V. CoSMoMVPA: multi-modal multivariate pattern analysis of neuroimaging data in Matlab / GNU Octave. Frontiers in Neuroinformatics, 2016. doi:10.3389/fninf.2016.00027. Connolly, A. C., Guntupalli, J. S., Gors, J., Hanke, M., Halchenko, Y. O., Wu, Y. C., Abdi, H., and Haxby, J. V. The Representation of Biological Classes in the Human Brain. Journal of Neuroscience, 32(8):2608–2618, February 2012. Haxby, J. V., Gobbini, M. I., Furey, M. L., Ishai, A., Schouten, J. L., and Pietrini, P. Distributed and overlapping representations of faces and objects in ventral temporal cortex. Science, 293(5539):2425–2430, September 2001.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice

Faculty: Faculty of Science

Course ID: ÚINF/ COK/22	Course name: Certified training course

Course type, scope and the method: Course type: Recommended course-load (hours): Per week: Per study period: Course method: present

Number of ECTS credits: 4

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion: Completion of a certified professional/training course.

Learning outcomes: The PhD student acquires up-to-date scientific knowledge, develops the capabilities of scientific work and familiarizes himself with the methodologies of making scientific knowledge available. He confronts his own knowledge and skills with other course participants, develops the abilities of peer discussion in the given scientific field.

Brief outline of the course:

University: P. J. Šafárik University in Košice	

Faculty: Faculty of Science	

Course ID: ÚINF/ CZC/22	**Course name:** Citation in international scientific journal

Course type, scope and the method:
 Course type:
 Recommended course-load (hours):
 Per week: Per study period:
 Course method: present

Number of ECTS credits: 4

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
 Obtained citation in a foreign scientific journal

Learning outcomes:
 Obtaining a citation demonstrates broad and very well-founded scientific knowledge in the researched field, based on the ability to formulate research questions, to reflect on a scientific problem in such a way that generates new knowledge. At the same time, a citation in an indexed source demonstrates the competence to communicate new knowledge, which is a significant contribution to scientific knowledge, at the highest expert level.

Course type, scope and the method: **Course type:** **Recommended course-load (hours):** **Per week: Per study period:** **Course method:** present
Number of ECTS credits: 5
Recommended semester/trimester of the course:
Course level: III.
Prerequisities:
Conditions for course completion: Co-investigator of the applied research project
Learning outcomes: The PhD student demonstrates the ability to participate in teamwork, to bring his own contribution to the solution of the project objective of applied research and to take responsibility for assigned tasks. By solving an applied research project, he acquires the ability to implement the project objective according to the established procedure, to follow the project schedule, to coordinate his own activities with colleagues, to participate in the creation of applied research outputs. The PhD student gains valuable experience from the practical course of a grant project with a focus on applied research.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice

Faculty: Faculty of Science

Course ID: ÚINF/ VYMD/15	Course name: Computational complexity and models

Course type, scope and the method:
  Course type: Lecture
  Recommended course-load (hours):
  Per week: 2 Per study period: 28
  Course method: present

Number of ECTS credits: 9

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion: Written test combined with an oral examination.

Learning outcomes: Providing an extended backgroung in the area of efficient computations, computational complexity of algorithms, fundamental time and space complexity classes, hardest complete problems, and about reducibility among problems.

Brief outline of the course: 1. Measuring time and space complexity, basic computational models: single- and multi-tape Turing machines, RAM and RASP models, unit and logarithmic costs. 2. Basic complexity classes: L, NL, P, NP, PSPACE, NPSPACE, EXPTIME, NEXPTIME, EXPSPACE. 3. P versus NP, L versus NL. Examples of complete problems in these classes. 4. Polynomial time and logarithmic space reducibilities, definition and basic properties of complete problems. 5. NP-completenss of the Boolean formula satisfiability (SAT). 6. Variants of SAT, problems related to graph coloring. 7. Other NP-complete problems: vertex cover, Hamiltionian paths, subset sum, balancing, traveling salesman problem. 8. Subexponential deterministic solutions for selected NP-complete problems: planar 3-colorability, balancing. Restricted variants with more efficient solutions. 9. Space complexity classes: Savitch theorem, inductive counting. 10. Problems complete for NL, P, and PSPACE: graph accessibily (GAP), circuit-value, quantified Boolean formulas (QBF). 11. Hierarchy and translation theorems for time and space. 12. Relativized complexity classes. 13. Alternating complexity classes. 14. Polynomial time hierarchy. 15. Alternating logarithmic space hierarchy.

University: P. J. Šafárik University in Košice

Faculty: Faculty of Science

Course ID: ÚINF/ KRYD/15	Course name: Cryptology

Course type, scope and the method:
Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present

Number of ECTS credits: 9

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion: Witten and oral exam.

Learning outcomes: To learn theoretical background and standard methods of computer algebra and know how they can be used in cryptographic systems and cryptoanalytic methods. To know current trends of research in this area of computer science.

Brief outline of the course: Special parts of computational algebra - rings of polynoms, cyclic groups, factorization of big numbers, arithmetic of eliptic curves. Actual problems of symmetric and nonsymmetric cryptography and cryptoanalysis.

Recommended literature: 1. ROSEN, K. H.: Elementary Number Theory and Its Applications, Addison Wesley, 2000 2. STINSON, D. R. : Cryptography. Theory and Practie, CRC Press, 2002 3. COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice

Faculty: Faculty of Science

Course ID: ÚINF/ SDSD/15	Course name: Data and signal processing

Course type, scope and the method:
 Course type: Lecture
 Recommended course-load (hours):
 Per week: 2 Per study period: 28
 Course method: present

Number of ECTS credits: 8

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
The ability to formulate a problem in the acquired terminology and solve it within a project.
Project.
Oral exam.

Learning outcomes:
During the completion of the course, the doctoral student will master the most relevant methods of signal processing and corresponding software. He will be able to explain the differences between the types of stochastic data models and thus analyze and simulate data, determine the scheme or dependence between attributes and obtain information.

Brief outline of the course:
1. Random processes and time series, Moving average, ARIMA processes.
2. Markov chains, Markov Chains Monte Carlo - MCMC.
3. Stationary processes and correlation function.
4. Martingales, Wiener process and SDE.
5. Fourier transformation, FFT, Fourier series.
6. Wavelet analysis.
7. Filtration, Kalman filter.
8. Modeling, Goodness of fit tests; Likelihood and Bayesian principle.
9. Mutual information, Fisher information, Akaike criterion.
10. Nonparametric estimation and approximation: Nadaraya-Watson kernel, Loess(locally estimated scatterplot smoothing).
11. Smoothing Spline and penalization, Multivariate adaptive regression spline (MARS), Generalized additive model (GAM).

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice

Faculty: Faculty of Science

Course ID: ÚINF/ ODZP/15	Course name: Defence of diploma thesis

Course type, scope and the method:
Course type:
Recommended course-load (hours):
Per week: Per study period:
Course method: present

Number of ECTS credits: 30

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
The dissertation thesis is the result of the student's own scientific research. It must not show elements of academic fraud and must meet the criteria of good research practice defined in the Rector's Decision no. 21/2021, which lays down the rules for assessing plagiarism at Pavol Jozef Šafárik University in Košice and its components. Fulfillment of the criteria is verified mainly in the process of supervision and in the process of thesis defense. Failure to do so is reason for disciplinary action.

Learning outcomes:
The dissertation thesis has the character of a scientific work and the student demonstrates extensive mastery of the theory and professional terminology of the field of study, acquisition of knowledge, skills and competencies in accordance with the declared profile of the graduate of the study program, as well as the ability to apply them creatively in solving selected scientific problem. The student demonstrates the ability of independent scientific work in terms of content, formal and ethical. Further details on the dissetation thesis are determined by Directive no. 1/2011 on the basic requirements of final theses and the Study Regulations of UPJŠ in Košice for doctoral studies.

Brief outline of the course:
1. Elaboration of the dissertation thesis in accordance with the instructions of the supervisor.
2, Presentation of the results of the dissertation thesis before the examination commission.
3. Answering questions from oponents and questions related to the topic of the dissertation thesis within the discussion.

Recommended literature:
The recommended literature is determined individually in accordance with the topic of the dissertation thesis.

Course type, scope and the method:
 Course type: Practice
 Recommended course-load (hours):
 Per week: 2 **Per study period:** 28
 Course method: distance, present

Number of ECTS credits: 2

Recommended semester/trimester of the course: 1.

Course level: III.

Prerequisities:

Conditions for course completion:
 Completion of e-course English for PhD Students (lms.upjs.sk), consultations (1-3).
 Written assignments - Professional/Academic CV, Short Academic Biography.

Learning outcomes:
 The development of students´ language skills - reading, writing, listening, speaking; improvement of their linguistic competence - students acquire knowledge of selected phonological, lexical and syntactic aspects; development of pragmatic competence - students acquire skills for effective and purposeful communication, with focus on Academic English and English for specific/professional purposes, level B2.

Brief outline of the course:
 Specific aspects of academic and professional English with focus on correct pronunciation, vocabulary development (noun and verb collocations, phrasal verbs, prepositional phrases, word-formation, formal/informal language, etc.), selected aspects of English grammar (prepositions, grammar tenses, passive voice, etc.), academic writing (professional/academic CV, Short Academic Biography).

 Per week: 2 **Per study period:** 28
 Course method: present

Number of ECTS credits: 8

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
 During consultations during the semester.
 Independent and creative mastery of theoretical and practical aspects of the issue and an overview of the current state of research and further direction, in the form of an oral exam, are evaluated.

Learning outcomes:
 The aim of the course is to understand the basic features of formal conceptual analysis as one of the methods of relational-data analysis and its relationship to other data-mining methods.

Brief outline of the course:
 Basic theorem on conceptual lattices.
 Fuzzifications of concept lattices.
 Formal conceptual analysis in terms of category theory.
 Relationship of formal concept analysis to other data-mining methods.
 Applications of formal concept analysis.

Recommended literature:

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice

Faculty: Faculty of Science

Course ID: ÚINF/ AFJD/15	Course name: Formal languages and finite-state automata

Course type, scope and the method:
 Course type: Lecture
 Recommended course-load (hours):
 Per week: 2 Per study period: 28
 Course method: present

Number of ECTS credits: 9

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
 Written test combined with an oral examinationi.

Learning outcomes:
 To obtain background about efficient representation of regular languages and finite state automata, as well as about connection between automata and complexity theory.

Brief outline of the course:
 Chomsky hierachy of languages and grammars. Finite state automata and its variants: deterministic, nondeterministic, alternating, probabilistic, quantum ... one-way, two-way, reversal bounded. Regular expressions and grammars. Unary regular languages and their properties. Connection between finite state automata and complexity theory. Pushdown automata, time and space complexity for recognition of context-free languages. Closure properties of contex-free, context-sensitive, and recursively enumerable languages.

Recommended literature:
 Current journal publications on the topic, especially those related to the descriptional complexity of automata.
 J.E. Hopcroft, R.Motwani, J.D. Ullman: Introduction to automata theory, languages, and computation, Addison-Wesley, 2001.

Prerequisities:

Conditions for course completion:
 Publication accepted in a foreign journal as an author/co-author.

Learning outcomes:
 By publishing in a foreign journal as an author/co-author, the PhD student demonstrates a high level of ability to identify, evaluate, and apply correct scientific methods or research methodology. He demonstrates the ability to reflect on a scientific problem by using the latest approaches and applying them critically. He demonstrates the competence to use existing theories and concepts in an innovative way, as well as to generate new original scientific knowledge, which he can publish according to the highest qualitative and ethical standards of the field. The PhD student demonstrates the ability to critically evaluate and respond to reviewers' suggestions, to finalize his own ideas.

 Course type:
 Recommended course-load (hours):
 Per week: Per study period:
 Course method: present

Number of ECTS credits: 5

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
 Completion of a foreign study stay lasting less than 30 days.

Learning outcomes:
 By completing a shorter study stay, the PhD student demonstrates the ability to reflect on research problems and work critically with sources at an expert level and in an interdisciplinary context, while being able to generate new knowledge. He is able to actively communicate at an expert level in more than one language. He acts as a responsible independent scientist, works independently and in a group with the aim of pushing the boundaries of knowledge and transferring them to other areas of research, to practice and to the wider public. He can competently argue and explain his ideas.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	

Course ID: ÚINF/ ZMRI/18	**Course name:** Introduction to fMRI Data Analysis

Course type, scope and the method:
 Course type: Lecture
 Recommended course-load (hours):
 Per week: 3 **Per study period:** 42
 Course method: present

Number of ECTS credits: 9

Recommended semester/trimester of the course: 4.

Course level: III.

Prerequisities:

Conditions for course completion:
 Midterm exam. Project
 Final exam consisting of written and/or oral part.

Learning outcomes:
 This course provides the background necessary for designing, conducting, and interpreting fMRI studies. Lectures are formatted as advanced seminars, combined with hands-on labs. The course will also introduce basic neuroscience concepts necessary.

Brief outline of the course:
 1. Design methods for stimulus-driven and task-driven fMRI experiments.
 2. Design methods for resting-state fMRI experiments and other types.
 3. Workflows for model-based analysis methods.
 4. Workflows for data-driven analysis methods.
 5. Analysis methods using MVPA.
 6. Analysis using ICA and graph theory.
 7. Computational modeling.
 8. Parametric and non-parametric statistics.
 9. Integrating functional MRI with PET / EEG / MEG.
 10. Tools: FreeSurfer, FSL.
 11. diffusion MRI data, connectomics.
 12. large-scale neuroimaging initiatives, Big Data analysis, and machine learning.

University: P. J. Šafárik University in Košice	

Faculty: Faculty of Science

Course ID: ÚINF/ LOGD/15	**Course name:** Logic

Course type, scope and the method:
 Course type: Lecture
 Recommended course-load (hours):
 Per week: 2 **Per study period:** 28
 Course method: present

Number of ECTS credits: 9

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
 Satisfiable understanding of basic concepts.

Learning outcomes:
 Understanding of basic notions of mathematical logic (logic language, term, formula, axioms, proof, provability, truth, model, syntax and semantics, soundness, completeness) and ability to formalize concisely.

Brief outline of the course:
 Predicate logic – logic language, syntax and semantics, term, formula.
 Axioms, proof, provability.
 Interpretation, truth, model.
 Correctness of the predicate logic.
 Boolean algebras.
 Syntactic model, completeness of predicate logic.
 Inductive structures in general.
 Aplications of logic in database systems.

Faculty: Faculty of Science

Course ID: ÚINF/ MUID/18	**Course name:** Methods of computational learning and artificial intelligence

Course type, scope and the method:
Course type: Lecture **Recommended course-load (hours):** **Per week:** 2 **Per study period:** 28 **Course method:** present

Number of ECTS credits: 9

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion: The realization of a project focused on methods of computational learning and artificial intelligence. Successful completion of the written and oral part of the exam focused on computational learning and artificial intelligence.

Learning outcomes: The knowledge about methods used to solve issues in the following two areas: 1. Learning from experimental data - examples, samples, measurements, records, or observations. 2. Inclusion of existing structured human knowledge in the created systems - experience, expert activity, heuristics

Brief outline of the course: 1. Concepts, hypotheses, learning algorithms, Boolean formulae and representations 2. Probabilistic Learning 3. Efficient algorithms I 4. Efficient Algorithms II 5. VC dimension 6. CS224N: Introduction and word vectors 7. CS224N: Word vectors and word senses Word window classification, NN, PyTorch, RNN and language models 8. CS224N: RNN and language models Matrix calculus and BP, Linguistic structure dependency 9. CS224N: Machine translation Seq2Seq and attention (L8) 10. CS224N: Convolutional Networks for NLP (L11) 11. CS224N: Subword models (L12) 12. CS224N: Contextual word embeddings (L13): BERT 13. CS224N: Modeling contexts of use: Contextual representations and pretraining. ELMo, BERT 14. CS224N: Natural language generation

 Course method: present

Number of ECTS credits: 9

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
 Written and oral exam.

Learning outcomes:
 To learn essential properties of the used cryptographic authentication and certification schemes and standard methods of attacks to them. To understand the theoretical background of a design of formal models and know how it is possible to utilise them in practise. To know the actual problems concerning the analysis of the security of cryptographic protocols.

Brief outline of the course:
 Authentication and certification schemes, key distribution and maintenance. Formal description of cryptographic protocols and methods for their analysis. Algebraic and logic methods for attack modelling, utilisation of dynamic logical systems. Datalog for automatic security verification.

 Course method: present

Number of ECTS credits: 9

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
 During consultations during the semester.
 Independent and creative mastery of theoretical and practical aspects of the issue, an overview of the current state of research and open problems and further direction, in the form of a written and oral exam, are evaluated.

Learning outcomes:
 To give the students basic techniques in systems processing imperfect information to be able read and write scientific papers in the area.

Brief outline of the course:
 Belief and probability, Dempster-Shaferova belief. Necessity and possibility. Uncertainty in artificial intelligence.
 Fuzzy sets, constructions of fuzzy sets from statistic data.
 Uncertainty in artificial intelligence, Markov and Bayesian networks, belief updating, belief revision.

Recommended literature:

Number of ECTS credits: 9

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
 Midterm exam. Project
 Final exam consisting of written and/or oral part.

Learning outcomes:
 Skills in quantitative analysis and modeling of neural data. Overview of cognitive functions and their neural basis in the human brain.

Brief outline of the course:
 1. Cognitive Science
 2. Neuron, synaptic transmission, CNS, experimental methods
 3. Hearing and speech: general intro
 4. Spatial hearing
 5. Auditory scene analysis, "Cocktail party effect", informational masking.
 6. Vision: Intro - pathways, perception, illusions.
 7. Binocular and spatial vision.
 8. Visual motion perception.
 9. Sensory and motor system.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice

Faculty: Faculty of Science

Course ID: KPE/ PgVU/17	Course name: Pedagogy for University Teachers

Course type, scope and the method:
  Course type: Lecture
  Recommended course-load (hours):
  Per week: Per study period: 28s
  Course method: distance, present

Number of ECTS credits: 5

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion: 1. Development of a teaching diary—100% 2. Compulsory active participation and attendance in accordance with the Study Regulations.

Learning outcomes: Students will be able to: Apply didactic principles, methods, forms, and tools in the teaching of a specialised subject. Specify the educational procedures of a university teacher in subject teaching, pedagogical diagnostics, evaluation of learning outcomes, and self-reflection. Present rationalisation and streamlining possibilities in the teaching of specialised subjects. Apply educational competencies of university teachers taking into account the peculiarities of educating university students.

Brief outline of the course: The personality of a university teacher. Teaching styles. Student in university education. Student learning styles. Possibilities of adapting teaching styles and student learning styles. University teacher–student interaction and communication in the teaching process. Pedagogical competencies of a university teacher. Didactic analysis of the curriculum; teaching materials and textbooks. Forms of university teaching. Methods of university teaching. Verification methods and student assessment. Creation of a didactic test. Designing university teaching process. University teacher self-reflection.

  Course method: present

Number of ECTS credits: 5

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
 Active involvement in the popularization of science.

Learning outcomes:
 Demonstrated ability to present science to the lay public, use interactive methods of scientific communication, identify the target group and adapt the communication language to the level of professional knowledge. A PhD student is able to arouse interest and motivate specific target groups in the field of his scientific work, but also in the wider context of science.

Number of ECTS credits: 5

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion: Presentation at the seminar

Learning outcomes: By actively participating in the seminar, the PhD student demonstrates the ability to identify, evaluate, and apply correct scientific methods or research methodology in his field of study. He demonstrates the ability to reflect on a specific scientific problem by using the latest approaches and applying them critically. Demonstrates competence in using existing theories and concepts in an innovative way, as well as generating new original scientific knowledge and communicating research results by adequate means and through Slovak or a foreign language.

 Per week: Per study period:
 Course method: present

Number of ECTS credits: 10

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
 Principal investigator of an internal grant (VVGS)

Learning outcomes:
The PhD student demonstrates the ability to process a successful application for his own research problem within the internal grant system at UPJŠ. Acquires skills with the design of research stages, their time schedule, measurable outputs and adequate distribution of funds. The very solution of the internal VVGS grant acquires the ability to implement the project intention according to the established procedure, to be responsible for achieving the set outputs. As a responsible researcher, the PhD student acquires competencies in project management, its administration, and presentation of results.

 Course method: present

Number of ECTS credits: 9

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
 Written test combined with an oral examination.

Learning outcomes:
 Providing en extended backgroung in the area of probabilistic and approximation algorithms, with respect to their classification, efficiency, and probability of error.

Brief outline of the course:
 1. Elementary probability theory. Basic probabilistic computational models.
 2. Las Vegas algorithms, One-sided error Monte Carlo algorithms.
 3. Two-sided error Monte Carlo algorithms, with bounded and unbounded-error.
 4. Probabilistic classes with polynomial time.
 5. Foiling the adversary
 6. Hashing.
 7. Fingerprinting.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	

Faculty: Faculty of Science	

Course ID: KPPaPZ/PsVU/17	**Course name:** Psychology for University Lecturers

Course type, scope and the method:
 Course type: Lecture
 Recommended course-load (hours):
 Per week: Per study period: 28s
 Course method: distance, present

Number of ECTS credits: 5

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
 Case study, micro-output, its analysis
 Current modifications of the course are listed in the electronic bulletin board of the course.

Learning outcomes:
 After completing the course, students can:
 and Understand, summarize and explain selected psychological knowledge from cognitive psychology, emotion and motivation psychology, personality psychology, developmental, social, educational psychology and health psychology.
 b) apply the above psychological knowledge necessary for the professional, competent performance of university teaching practice of doctoral students
 c) to create and implement the teaching of a professional topic with applied psychological knowledge
 d) evaluate their performance and the performance of their classmates, provide feedback

Brief outline of the course:
 The content of the course is based on selected psychological knowledge of cognitive psychology, psychology of emotions and motivation, personality psychology, developmental, social, educational psychology and health psychology. Teaching is realized by a combination of lectures with interactive, experiential methods, discussion, open communication with mutual respect, support of independence, activity and motivation of students. Syllabus: University teacher and his work in the teaching process with a focus on: teachers in relation to themselves (cognitive, personal, social and competencies in the use of methods), in relation to students and as part of the teacher-student relationship on the basis of selected areas of cognitive psychology, psychology of emotions and motivation, developmental psychology, social psychology, educational psychology and health psychology with application to the university environment

Faculty: Faculty of Science

Course ID: ÚINF/ VKDD/15	Course name: Selected topics on numerical analysis and data mining

Course type, scope and the method: **Course type:** Lecture **Recommended course-load (hours):** **Per week:** 2 **Per study period:** 28 **Course method:** present

Number of ECTS credits: 8

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion: The ability to formulate a problem in the acquired terminology and solve it within a project. Project. Oral exam.

Learning outcomes: Upon completion of the course, the doctoral student, when solving a new type of problem, is able to choose a suitable method based on the analysis of requirements and principles of the considered numerical method and algorithm. The student will master suitable software for data processing and information gain.

Brief outline of the course: 1. Solving Systems of Equations, QR, SVD and eigenfaces 2. Orthogonalization 3. Splines of class C2, B-splines, Uniform and non-uniform splines 4. Interpolation splines; 2D and 3D splines 5. Parametric Data approximation and smoothing 6. Piecewise approximation with automatic node detection and penalization 7. Chebyshev nodes and CHEBFUN 8. Logistic regression 9. Multidimensional methods, Principal components 10. Factor analysis, Discriminant analysis 11. Cluster analysis

 Per week: 2 **Per study period:** 28
 Course method: present

Number of ECTS credits: 5

Recommended semester/trimester of the course: 1.

Course level: III.

Prerequisities:

Conditions for course completion:
The condition for passing the course is a summary presentation of the student's results in the field of research and a presentation of studied professional and scientific texts.

Learning outcomes:
The result of the education is the student's guidance to independent and creative extraction of the latest knowledge focused on issues related to the topic of the student's dissertation and continuous verification of his ability to present the newly acquired knowledge.

Brief outline of the course:
1. Independent study of professional and scientific texts focused on issues related to the topic of the dissertation,
2. Presentation of newly acquired knowledge,
3. Summary presentation of research activities.

Recommended literature:
Current professional and scientific literature in the field of dissertation topic or related field.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	

Faculty: Faculty of Science	

Course ID: Dek. PF UPJŠ/JSD/14	**Course name:** Spring School for PhD Students

Course type, scope and the method:
 Course type: Lecture
 Recommended course-load (hours):
 Per week: Per study period: 4d
 Course method: distance, present

Number of ECTS credits: 2

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
Active participation in the Spring School of PhD students of UPJŠ.

Learning outcomes:
By actively participating in the Spring School of PhD Students of UPJŠ, the PhD student demonstrates a high level of ability to process the issues of his dissertation for a multidisciplinary audience with an emphasis on clarifying the motivation, scientific problem, processing methodology and own contribution to the solution of the selected topic. The PhD student demonstrates the ability to professionally discuss various research topics, present his own positions and accept a plurality of opinions. Demonstrates the ability to communicate research results to a wider professional audience with adequate means and through the Slovak language.

Brief outline of the course:
1. Interdisciplinary lectures from the fields of medicine, natural sciences, law, public affairs, humanities. Lecturers - top foreign or national experts from the mentioned fields.
2. Scientific lectures in sections created within related disciplines. Lecturers - top experts from UPJŠ from the mentioned fields.
3. Scientific contributions of PhD students in sections of related fields.
4. Panel discussions on the issue of PhD studies and current trends in the development of scientific disciplines at UPJŠ.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	

Faculty: Faculty of Science	

Course ID: ÚINF/ PDS/22	**Course name:** The thesis for dissertation exam

Course type, scope and the method:
 Course type:
 Recommended course-load (hours):
 Per week: Per study period:
 Course method: present

Number of ECTS credits: 20

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
The thesis for dissertation exam is the result of the student's own scientific research. It must not show elements of academic fraud and must meet the criteria of good research practice defined in the Rector's Decision no. 21/2021, which lays down the rules for assessing plagiarism at Pavol Jozef Šafárik University in Košice and its components. Fulfillment of the criteria is verified mainly in the process of supervision and in the process of thesis defense. Failure to do so is reason for disciplinary action.

Learning outcomes:
The thesis for dissertation exam has the character of a scientific work and the student demonstrates extensive mastery of the theory and professional terminology of the field of study, acquisition of knowledge, skills and competencies in accordance with the declared profile of the graduate of the study program, elaboration of the state of the art in the given area and formulation of original scientific goals. The student demonstrates the ability of independent scientific work in terms of content, formal and ethical. Further details on the thesis for dissertation exam are determined by Directive no. 1/2011 on the basic requirements of final theses and the Study Regulations of UPJŠ in Košice for doctoral studies.

Brief outline of the course:
1. Elaboration of the dissertation thesis in accordance with the instructions of the supervisor.
2, Presentation of the results of the dissertation thesis before the examination commission.
3. Answering oponents' questions and questions related to the topic of the dissertation thesis within the discussion.

Recommended literature:
The recommended literature is determined individually in accordance with the topic of the dissertation thesis.

Course language:
Slovak or English

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚINF/ TNSD/15	**Course name:** Theoretical aspects of neural networks

Course type, scope and the method:
 Course type: Lecture
 Recommended course-load (hours):
 Per week: 2 **Per study period:** 28
 Course method: present

Number of ECTS credits: 9

Recommended semester/trimester of the course:

Course level: III.

Prerequisities:

Conditions for course completion:
Evaluation of individual work in the study of theoretical issues of neural networks - advanced methods of neural networks. Oral examination based on selected type of neural network.

Learning outcomes:
To understand mathematical principles of neural networks and to know their capabilities. To be able to construct models of neural networks to solve some problems.

Brief outline of the course:
1.-3. Computational complexity of neural networks.
4.-6. Probabilistic neural networks.
7.-9. Computational capability of neural networks, a transformation of neural networks to Turing machines, and Turing machines to neural networks.
10.-12. Approximation of functions using neural networks.
13. Kolmogorov theorem and its proof, theorems connected to Kolmogorov theorem.
