Course level: II.	
Prerequisites:	
Conditions for course completion: <ol style="list-style-type: none"> 1. 100% participation of exercises. 2. learn how to work with the key for determining lichens, practical use 3. show and demonstrate the knowledge acquired during the exercises in TLC, HPLC, NMR 4. be able to assemble the equipment necessary for the isolation of substances (e.g. secondary metabolites) 5. demonstrate theoretical knowledge in the field of lichenology in the form of an oral exam 	
Learning outcomes: After successfully completing the subject, the student should be able to use the key for identification of lower plants - lichens, understand and better understand the meaning of symbioses and thus specifically lichenism, understand the meaning of photobiont and mycobiont, be able to distinguish lichen from other lower plants in nature. The student should understand the significance of the secondary metabolites of lichens, how they are formed and how they are used in practice. As part of the practical part, methods for the isolation and identification of secondary metabolites such as spot-test, TLC, HPLC should be mastered. These methods are connected with basic knowledge of chemistry such as calculations, dilutions, preparation of solutions.	
Brief outline of the course: <ol style="list-style-type: none"> 1. introduction to the study of lichenology and concepts 2. history from antiquity to the present 3. Symbiosis and lichenism 4. the role of photobiont and mycobiont in lichenism 5. Lichen thallus, types and subtypes 6. reproduction and reproduction 7. secondary metabolism of lichens and biosynthetic pathways 8. biological and ecological role of lichens and their secondary metabolites 9. extraction of secondary metabolites of lichens 10. Course ID: ÚBEV/ ZOG1/03	Course name: Zoogeography
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present	
Number of ECTS credits: 6	
Recommended semester/trimester of the course: 1., 3.	
Course level: I., II.	
Prerequisites:	
Conditions for course completion: Active participation in seminars. Preparation of oral presentation to a selected topic. Completion of two semestral written examinations. Oral examination.	
Learning outcomes: The main goal of the subject is to get knowledge on the basic reasons of recent distribution of the animals on the Earth, zoogeographic regionalization of the Earth's surface and human influence on the faunal distribution in the history.	
Brief outline of the course: This course will review our current understanding of the patterns of animal distribution and the processes that influence distributions of species and their attributes. Zoogeography will integrate information on the historical and current ecology, genetics, and physiology of animals and their interaction with environmental processes (continental drift, climate) in regulating geographic distributions. The course will emphasize descriptive and analytical approaches useful in hypothesis testing in zoogeography and will illustrate applied aspects of zoogeography (e.g. refuge design in conservation).
