COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: SK/ BSW-DM/22	Course name: Basics of Scientific Work
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 7.	
Course level: I.II.	
Prerequisites:	
Conditions for course completion: Completion of 100% participation in practical exercises and lectures. Continuous review with a record of assessment during clinical teaching. Passing a test from lectures with a minimum rating of 60%. Final test with a grade of at least 60%. The interim assessment for each subject will be registered in AIS. During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%.	
Learning outcomes: The graduate obtains basic information from the field of scientific and medical research. He acquires knowledge from the field of animal experiments as well as nanotechnology. Acquires knowledge of the ethical rules of animal experiments.	
Brief outline of the course: Current medical and scientific research. Starting points and goals of scientific work in biomedical sciences. The structure of the animal experiment. Science work. Inaccuracy in scientific research. Moral aspects of scientific discoveries. Nobel Prize. About logic in scientific work (logic, reasoning, abduction). Cognitive sciences, neural networks. The roots of Slovak science. Nanotechnology. Scientific research and scientific problem. Evidence-based medical practice. Ethical prerequisites for working with experimental animals. Model of experimental gastric ulcer. Rules for working with experimental animals. An experimental model of audiogenic epilepsy. Care of experimental animals. Model of experimental myocardial infarction. Model of atrial and ventricular fibrillation and flutter of the heart. Seminar on lecture and rhetoric. Student presentations.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: ULCHBKB/CB-DM/15	Course name: Clinical Biochemistry
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 8.	
Course level: I.II.	
Prerequisites: UPF/PP-DM2/15	
Conditions for course completion: seminars, lectures; more details: https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/dental-medicine/	
Learning outcomes: The graduate should understand the relationships between metabolic changes and laboratory test results and be able to interpret selected the laboratory tests result of patients important not only for the health oral cavity but the organism as a whole. The course is organized in form of lectures and seminars (e.g. solution of selected case reports) and it offers information on biochemical laboratory methods important for screening, diagnostics and therapy monitoring of selected diseases. It is a highly applied biochemistry, which is performed by lecturers with experience in clinical biochemistry.	
Brief outline of the course: Introduction to clinical biochemistry. Water and mineral homeostasis (e.g. regulation of osmolality). Acid-base balance disorders. Renal function. Liver function. Biochemistry background of diabetes mellitus. Cardiac markers. Calcium-phosphate and magnesium balance. Biochemical tests in endocrinology. Laboratory markers of malignant diseases. Disorders of iron metabolism. Biochemistry of extreme age. More details.: https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/dental-medicine/

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: SK/CD-DM1/22	Course name: Conservative Dentistry 1
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 3 Per study period: 14 / 42 Course method: present	
Number of ECTS credits: 4	
Recommended semester/trimester of the course: 6.	
Course level: I.II.	
Prerequisites: SK/PDM-DM4/15	
Conditions for course completion: Completion of 100% participation in practical exercises and lectures. Ongoing monitoring with evaluation record during clinical training. Passing a test from lectures with a minimum rating of 60%. Final test with a grade of at least 60%. The interim assessment for each subject will be registered in AIS. During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%. List of procedures during clinical practice: Comprehensive examination of the oral cavity and facial area of an adult patient and design of a treatment plan (14) Vital treatment of the dental pulp - direct covering of the dental pulp (5 cases), indirect covering (5 cases), evaluation of radiograms (15 cases).	
Learning outcomes: The graduate acquires knowledge about the origin of dental caries, diagnosis and treatment of dental caries, practical examination of patients, finding out the anamnesis, clinical learning of dental caries diagnosis and treatment indications. It practically treats the patient under the control of the assistant teacher.	
Brief outline of the course: Subject and content of cariology: epidemiology and incidence of dental caries, economic importance of dental caries treatment, patient examination and the importance of anamnesis, file documentation, proper treatment of glass walls, the importance of preventive extension, the importance of the quality of consistency of the filling material, the choice of instruments for the material application, compliance with the parameters of mixing time and solidification of materials. Etiopathogenesis of tooth decay. Diagnosis of dental caries. Mechanisms of defense of tooth decay - epimineralization, transparent dentin, tertiary dentine. Patomorphological picture of tooth decay. Dental caries treatment : clinical principles of preparation, indications for filling materials, practical	

treatment of individual types of dental caries according to Black, microinvasive preparations. Diagnosis and treatment of non-carious defects of hard dental tissues.						
Recommended literature: . Pickard s Manual of Operative Dentistry , 2011, ISBN-10: 0199579156 , ISBN-13: 9780199579150 . Minčík, J. List of procedures during clinical practice: Comprehensive examination of the oral cavity and facial area of an adult patient and design of a treatment plan (15) Vital treatment of the dental pulp - indirect overlap (8), direct overlap (5). Local treatment of dentinal hypersensitivity (5). Composite fillings (5). Glass ionomer filling (4). Evaluation of radiograms (20).	
Learning outcomes: The graduate will gain knowledge about the indications of individual types of materials, their properties, working procedures in the application of glass ionomer and composite materials, treatment and polishing of these materials	
Brief outline of the course: Filling materials and instruments for the application of dental materials – chemical curing materials, light-curing filling materials, adhesives. Glass ionomer cements - properties, composition, adhesion mechanism, using indications. Diagnosis and treatment of non-carious defects of hard dental tissues - abrasion, attrition, erosion. Dentine hypersensitivity - diagnostics, methods of treatment. Practical treatment of individual types of dental caries according to Black, using various materials, treatment of teeth with dentinal hypersensitivity.

Vital treatment of the dental pulp - indirect overlap (8), direct overlap (8). Local treatment of dentinal hypersensitivity (5). Composite fillings (5). Glass ionomer filling (4). Endodontic treatment (3). Evaluation of radiograms (20).	
Learning outcomes: The graduate acquires theoretical knowledge of the treatment of root canals in endodontics, which indicates in clinical practice under the supervision of the professor. Can diagnose and indicate treatment of dental pulp diseases.	
Brief outline of the course: Endodontics, introduction to endodontics, Histopathology and manifestation of dental pulp diseases. Causes, clinical features, diagnosis and therapy. Anatomical conditions of the medullary cavity, topography of the canal system, preparation, root instruments - ISO standard and therapeutic agents in endodontics. Staged and one-time method of root canal treatment, differences, initiations and workflow. Evaluation of endodontic treatment - X-ray, Fechter's criteria. Procedures with preservation of dental pulp vitality - selective excavation, direct pulp overlap, vital pulpotomy.	

Comprehensive endodontic treatment of the root system. Mastering of working with magnifying glasses. Acquisition of working with intraoral X-ray device.

Vital treatment of the dental pulp - indirect overlap (8), Composite fillings (5) Glass ionomer filling (5) Endodontic treatment (5) Evaluation of radiograms (20)	
Learning outcomes: The graduate acquires skills in diagnosis, differential diagnosis and treatment of dental caries affecting the dental pulp, treatment of root canals in endodontics, but also focuses on the prevention of apical periodontitis. Under professional guidance, he will use the acquired knowledge and practical skills in clinical exercises.	
Brief outline of the course: Clinical endodontics: preparation of the dentinal canal system, methods and techniques, use of Ni - Ti preparation tools, determination of the working length of the root canal. Root canal filling - methods and techniques, root filling materials. Apical periodontitis - causes, classification systems, diagnostics, differential diagnostics and therapies. X-ray assessment, prognosis. Surgical procedures supplementing endodontic treatment - possibilities of indication.

During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%. List of procedures during clinical practice: Comprehensive examination of the oral cavity and facial area of an adult patient and design of a treatment plan (15) Vital treatment of the dental pulp - indirect covering of the dental pulp (8) Composite fillings (5) Glass ionomer filling (5) Endodontic treatment (8) Evaluation of radiograms (20)	
Learning outcomes: The graduate acquires knowledge in the field of modern methods of diagnostics and treatment of hard dental tissues and pulpoperiodontal lesions, such as working with modern diagnostic and therapeutic devices under a microscope, diagnoser. He participates in the diagnosis of the causes of focal infections of dentogenic origin and subsequently participates practically in their elimination.	
Brief outline of the course: Whitening of devital and vital teeth - indications, mechanism of preparations action, individual types of used preparations. Pulpoparodontal lesions - clinical and X-ray, methods of treatment, prognosis. Focal infection of dentogenic origin and its consequences on the condition of systemic organs of the human body.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: SK/CD-DM6/15	Course name: Conservative Dentistry 6
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: Per study period: 22s / 110s Course method: present	
Number of ECTS credits: 7	
Recommended semester/trimester of the course: 11., 12..	
Course level: I.II.	
Prerequisites: SK/CD-DM5/22	
Conditions for course completion: Completion of 100% participation in practical exercises and lectures Ongoing monitoring with evaluation record during clinical training Passing a test from lectures with a minimum rating of 60%. Final test with a grade of at least 60%. The interim assessment for each subject will be registered in AIS. During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%. List of procedures during clinical practice: Comprehensive examination of the oral cavity and facial area of an adult patient and design of a treatment plan (15) Vital treatment of the dental pulp - indirect overlap (8) Composite fillings (5) Glass ionomer filling (5) Endodontic treatment (5) Filling with pulpal and parapulpal pins (3) Examination of focal infection (5) Evaluation of radiograms (20)	
Learning outcomes: The graduate acquires theoretical knowledge in the diagnosis and treatment of traumatic damage to the crown and the tooth root, participates in the reconstruction of the crown of devital teeth by pulpal and parapulpal retention systems. Gains knowledge of professional ethics and ethical standards in relation to patients, staff and colleagues.	
Brief outline of the course: Errors in cavity preparation and filling applications: non-compliance with basic preparation principles. Complex endodontic remediation, complications of endodontic treatment. Possibilities of reconstruction of the crown of devital teeth - pulpal, parapulpal retention systems in vital teeth.	

Traumatic damage to the crown and root and their treatment. Differential diagnosis of pain in the orofacial area. Examination and indications for the solution of dental focal infection. Professional ethics and ethical standards in relation to patients, staff and colleagues. Frontier issues of conservation dentistry with prosthetics, dentoalveolar surgery and periodontics.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: SK/ DMT-DM1/22	Course name: Dental Materials, Technologies and Devices 1
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 3.	
Course level: I.II.	
Prerequisites: SK/PDM-DM2/22	
Conditions for course completion: Completion of practical exercises and ongoing control; More information: https://www.upjs.sk/lekarska-fakulta/en/department/medical-and-clinical-biochemistry/education/subjects/dental-medicine/	
Learning outcomes: The graduate acquires comprehensive information about the physic-chemical properties of materials used in dentistry in the field of conservative dentistry and prosthetics. He will get an overview of the materials used for the treatment of dental caries and the materials used in the prosthetic treatment of the teeth. Knows the composition and properties of materials (e.g., metallic, organic, ceramic) used in dentistry. He will understand the principles of their processing and understand the principles of their practical use. Familiarizes himself with basic technological procedures.	
Brief outline of the course: Characteristics of dental materials used in conservative dentistry – chemical, physical, mechanical and biological properties. Preparations for determining and preserving the vitality of the dental pulp. Root filling materials. Metals and their alloys - properties, classification and distribution. Crystallization, phase diagrams. Importance of noble metals for use in dental alloys. Amalgams – composition, meaning, properties and corrosion. Materials used to treat and polish metals. Ceramic materials - composition, properties. Dental porcelain and metal-ceramic systems. Cements – composition, solidification reactions. Model materials - production, solidification, mixing ratio. Gypsum – composition, properties, indications for use. Macromolecular substances in dentistry – composition, properties and use. Polymerization - basic reactions. The structure of polymer compounds and the possibilities of their modification. Modelling and molding materials - waxes. Impression materials – composition, classification, solidification reactions. Auxiliary materials used in the production of dental prostheses. Biomaterials - properties and use in medicine. More information: https://www.upjs.sk/en/faculty-of-medicine/department/medical-and-clinical-biochemistry/education/subjects/dental-medicine/

Faculty: Faculty of Medicine	
Course ID: SK/ DMT-DM2/22	Course name: Dental Materials, Technologies and Devices 2
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 3	
Recommended semester/trimester of the course: 4.	
Course level: I.II.	
Prerequisites: SK/DMT-DM1/22	
Conditions for course completion: Completion of 100% participation in practical exercises and lectures. Ongoing monitoring with evaluation record during clinical practice. Passing a test from lectures with a minimum rating of 60%. Final test with a grade of at least 60%. The interim assessment for each subject will be registered in AIS. During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%.	
Learning outcomes: The graduate acquires knowledge of materials used in dentistry in the field of conservation dentistry and endodontics. These are materials used for the treatment of dental caries and materials used in the endodontic treatment of devital teeth, teeth with the dental pulp inflammatory diseases. The graduate acquires knowledge of materials used in dentistry in the field of dental prosthetics. These are materials used in prosthetic dental treatment with a fixed or removable prosthesis, materials used in TMJ rehabilitation. They will get acquainted with the working procedures of making prosthetic works	
Brief outline of the course: Materials used in conservative dentistry: fillers, pads and to maintain the vitality of the dental pulp. Preparations for determining the vitality of the dental pulp. Root filling materials . Biomaterials, their properties and using in medicine. Devices in dentistry, their using properties, technical handling and safe use. Distribution of prosthetic materials: own prosthetic materials (metal alloys, porcelain, resins), imprint materials. Gypsum - composition, properties, using indications . Waxes - composition, using indications . Putties. Materials used for the treatment and polishing of metals. Auxiliary materials used in the manufacture of dental prostheses. Principles of metal casting, resin and porcelain processing. Biomaterials, their properties and use in medicine. Prosthetics devices in dentistry , properties of their use, technical handling, safe use.

Number of ECTS credits: 4	
Recommended semester/trimester of the course: 6.	
Course level: I.II.	
Prerequisites: SK/PreD-DM/22	
Conditions for course completion: Completion of 100% participation in practical exercises and lectures. Continuous review with a record of assessment during clinical teaching. Passing a test from lectures with a minimum rating of 60%. Final test with a grade of at least 60%. The interim assessment for each subject will be registered in AIS. During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%.	
Learning outcomes: The graduate acquires important and necessary knowledge in the field of x-ray diagnostics, sources and effects of radiation. He will learn to evaluate different types of images and describe pathological and normal structures.	
Brief outline of the course: History of radiodiagnostics. Radiodiagnostic devices. Films used in dental practice and their processing. Intraoral and extraoral x-ray techniques indicated in individual branches of dentistry. Panoramic x-ray devices and techniques. Indications for x-ray examinations in individual branches of dentistry. Description of intraoral and extraoral radiographs - normal structures and pathological images. Safety and protection of staff and patients when working with x-ray devices and radiation, methods of reducing the radiation dose.

Learning outcomes: The graduate learns the correct procedure for taking an anamnesis and examining a patient, various techniques of topical and local anesthesia used in dentistry, learns to decide on the indications and contraindications of tooth extractions and the treatment of complications.	
Brief outline of the course: Anamnesis and examination of the patient, medical documentation. Local anesthesia in the orofacial area - anesthetics, indications and contraindications for administration of individual types of anesthetics, method of application. Complications of local anesthetic administration. Tooth extractions - extraction technique, complications during and after tooth extraction. Healing of	

extraction wounds and its complications. Surgical procedures supplementing endodontic treatment of the tooth. Replantation and tooth transplantation. Third molar surgery.

Learning outcomes: The graduate acquires knowledge and practical experience in the treatment of inflammations in the oral and facial area, the possibilities and risks of their spreading and the possibilities of their treatment, learns how to prevent inflammations. Acquires knowledge about diagnosis and therapy of salivary gland diseases, surgical therapy of cysts in the orofacial area.	
Brief outline of the course: Inflammations in the area of the oro-maxillofacial region: anatomical determination of spaces, causes of inflammations and routes of spread of infection. Inflammation of the facial bones: ostitis,	

osteomyelitis acute and chronic - causes, diagnosis, treatment, complications. Inflammation of the lips and tongue. Dentogenic inflammation of the jaws, oroantral and oronasal communications, foreign body in the jaw cavity. Inflammation of the jaw joint. Inflammation of the lymph nodes. Salivary gland diseases. Cysts in the orofacial region.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: KD/D-DM/22	Course name: Dermatovenerology
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 2 Per study period: 14 / 28 Course method: present	
Number of ECTS credits: 3	
Recommended semester/trimester of the course: 7.	
Course level: I.II.	
Prerequisites: IK/IM-DM2/15	
Conditions for course completion: To participate at all of practical exercises. In the case of excused absence practice, student may substitute up to 3 exercise. To get at least 60 % of total score for ongoing review of the theoretical training to practical exercises. Compulsory attendance in at least 4 lectures requirements	
Learning outcomes: To familiarize the student with the field of dermatology through an overview of types of disorders, differential diagnosis of skin diseases, procedures, and treatment methods common in dermatology. Students have to be certain of history taking and should develop a basic dermatologic vocabulary that enables them to appropriately describe skin lesions. The students should be familiar with the epidemiology of sexually transmitted diseases, their clinical manifestations, modes of transmission, diagnostic methods and their appropriate treatment.	
Brief outline of the course: General dermatology, Dermatological terminology and morphology. Skin infections (viral, bacterial, mycotic, parasitic). Erythematosquamous diseases. Psoriasis. Lichen planus. Endogenous and exogenous eczemas. Atopic dermatitis. Drug eruptions, urticaria, allergic reactions. Facial dermatoses. Bullous dermatoses. Autoimmune connective tissue diseases. Hair and nail disorders. Chronic venous insufficiency. Differential diagnosis of leg ulcers. Pediatric dermatovenerology. Skin tumours. Malignant melanoma. Syphilis. STD's.

Recommended semester/trimester of the course: 11., 12..	
Course level: I.II.	
Prerequisites: SK/SDT-DM1/22 and SK/SDT-DM2/22	
Conditions for course completion: A student signs for a topic of diploma thesis, which is published by a teacher of UPJS MF with third degree education. He defends his diploma thesis before the state commission. Obtaining the minimum number of credits for compulsory and compulsory optional subjects in the composition prescribed by the study plan. - completing the number of hours for individual diploma seminars - active participation in the processing of the thesis - evaluation of the diploma thesis with enrollment in AIS	
Learning outcomes: The graduate of the subject verifies the acquired knowledge in accordance with the profile of the graduate of Dentistry and the given topic related to the student's thesis. Part of the subject is processing according to the methodology for diploma and dissertation theses in terms of "Methodical guideline 56/2011-R on the requirements of final theses, their bibliographic registration, control of originality, storage and access 3. STN 01 6910: 1999. Rules for writing and editing documents" The diploma thesis must contain its own methodology, results, discussion and conclusion with the contribution of the work to the field. This work must be presented and defended before a committee consisting of state final exams.	
Brief outline of the course: The diploma thesis must contain clear stylized goals, key words for the given topic. Preparation and development of issues aimed at benefiting the department. Own observations and results in the given issue, evaluation of results, discussion, conclusion, contribution to the field. Presentation of the results of the thesis, answers to the questions of the opponent of the thesis and members of the committee.	
Recommended literature: Directive No. 2/2022 In accordance with Art. XII. par. 3 of the UPJŠ FM Organizational Rules and in connection with Directive No. 1/2011 on Essential Prerequisites of Final Theses, Doctorate Degree Theses, and Associate Professorship Degree Theses, Release and Making Available Thereof During the Time of Keeping the Same, and Originality Check Valid for Pavol Jozef Šafárik University	

in Košice and Its Constituents, as amended (hereinafter "Directive No. 1/2011"); Rector's decision No. 9/2022 on the submission of Final Theses at the 1st, 2nd and joined 1st and 2nd degree of Higher Education and the Conclusion of License Agreements and in Accordance with § 63 par. 13 of Act no. 131/2002 Coll. on Higher Education Institutions and on Amendments to Certain Acts, as amended

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: USL/ FML-DM/16	Course name: Forensic Medicine and Medical Law
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 7.	
Course level: I.II.	
Prerequisites: UP/PA-DM2/19 and UA/A-DM2/15	
Conditions for course completion: Attendance on lectures and seminars to the specified extent, successful completion of a credit test and oral exam. Detailed conditions for mandatory participation and forms of evaluation are available on the department's website. https://www.upjs.sk/en/faculty-of-medicine/department/forensic-medicine/teaching/courses/dr/	
Learning outcomes: The aim of the subject is to acquaint students with the role of Forensic Medicine, as one of the main branches of medicine. The students will learn how to identify and assess the effects of violence on the human body, determine the cause of death in cases of non-violent and violent death, as well as apply medical knowledge to questions of civil and criminal law. Emphasis is placed on the importance of forensic stomatology and on acquiring basic knowledge necessary to perform an examination of the dead body at the scene of death, as a knowledge required of every future doctor.	
Brief outline of the course: Introduction to the forensic medicine. Role of forensic medicine in Slovakia and worldwide. Concept of forensic medicine in Slovakia. Health Care Surveillance Authority. Examination of the dead body at the scene of death. Coroner system and medical examiner system. Medical examination of the dead in Slovakia. Types of autopsies. Autopsy procedure. Neonatal autopsy. Documentation required for the autopsy. Autopsy diagnosis. Autopsy report. Medicolegal death investigation. Postmortem changes. Supravital and vital reactions. Identification of the living and the dead. Forensic dentistry. Identity of decomposed or skeletalised remains. Identification in mass disasters. Exhumation. Natural (non-violent) death in adults. Natural (non-violent) death in children. Sudden infant death syndrome. Violent death in children. Child abuse and neglect. Pregnancy and childbirth. Sexual offenses. Violent death. Mechanical injuries. Examination of wounds. Blunt and sharp force injuries. Firearm and blast injuries. Forensic investigation of traffic accidents. Suffocation. Mechanical asphyxia. Drowning. Thermal injuries. Electrical injuries. Diving accidents (barotrauma, decompression sickness). High altitude illness. Ionizing radiation injury and illness. Medical errors. Iatrogenic damage. Expert activity in medical profession. Forensic expert activity. Forensic medical examination of the living persons. Forensic toxicology. General aspects of poisoning. Types of poisons. Forensic diagnosis of poisoning. Methods in forensic toxicology. Gaseous poisons. Agrochemical poisons. Corrosive poisons. Heavy metals.	

Mushroom poisoning. Forensic toxicology. Alcohols. Medicolegal aspects of ethanol intoxication. Methanol poisoning. Ethylene glycol poisoning. Drugs of abuse and dependence. Forensic histopathology. Immunohistochemistry.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: Dek. LF UPJŠ/FMF/24	Course name: Foundation of Mindfulness
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 0 / 2 Per study period: 0 / 28 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 4., 6., 8., 10.	
Course level: I.II.	
Prerequisites:	
Conditions for course completion: Thought exercises – students will complete a thought exercise assignment. These exercises will ask students to reflect upon their own practice (20 points). Daily practices and mindfulness journals – students will commit to completing daily mindfulness exercises designed to cultivate and strengthen greater mindfulness practice. Daily brief reflections (1-2 paragraphs) in their mindfulness journals will chronicle insights. At least five entries per week required for full credit (70 points). Assessments - both at the beginning and end of the course, students will take the Mindfulness Attention Awareness Scale (MAAS), a self-administered and scientifically validated tool, to quantifiably measure any changes in perceived level of mindfulness. Scores are not recorded for grading purposes; students receive points for completion (10 points). Evaluation according to the current study rules and regulations.	
Learning outcomes: At the completion of this course, students will be able to: <ol style="list-style-type: none"> 1. Define the history and philosophical basics of spiritual and secular mindfulness practice. 2. Recognize how theory and research support the benefits of mindfulness practice. 3. Describe the practices and benefits of mindfulness practice. 4. Apply an informed mindfulness practice of their own. 5. Describe how mindfulness training can help them in their own lives and careers. 6. Identify the connections between mindfulness, stress, resilience, connection, and sense of belonging. 	
Brief outline of the course: Definition of Mindfulness Practicing Mindfulness Attending to the Present Acceptance Mindfulness and the Self

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: UVZH/ HE-DM/15	Course name: Hygiene and Epidemiology
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 8.	
Course level: I.II.	
Prerequisites: ULM/M-DM2/15	
Conditions for course completion: Active participation in lectures and seminars. Exam - written test.	
Learning outcomes: The student will acquire basic knowledge about the occurrence and spread of infectious and non-infectious diseases in the population, about the fundamental factors influencing their emergence, about preventive and repressive measures against their spread, and about improving the health status of the population. He will also acquire basic knowledge about risk factors in the dentist's office, and the effects of healthy nutrition on the oral health of the population and the individual.	
Brief outline of the course: Introduction to hygiene and epidemiology, basic concepts with a focus on diseases in the orofacial area. Environmental hygiene. The hygienic-epidemiological regime in the dentist's office. Personal and hygienic security of dental clinics. Food hygiene. The importance of nutrition in dental practice. Manifestations of nutritional deficiencies in the oral cavity. Prevention of tooth decay. Rational nutrition, alternative ways of eating. Work hygiene. Categorization of works. Professional risks in the dental clinic. The influence of physical, chemical, biological, and psychosocial factors in the work of a dentist. Obligatory and optional occupational disease. Work-related disease. Preventive measures – technical, organizational. Hygiene of children and adolescents. Methods of assessing the growth and development of children, dental age, and factors affecting the growth and development of the child's organism with a focus on the development of teeth and oral health in individual periods of child growth. Preventive and interventional health promotion programs in dentistry. The issue of water in dental workplaces. Water fluoridation. Epidemiological classification of diseases. Methods of epidemiology. Sources of infection. Carrier of pathogenic microorganisms. Transmission mechanism, phases, forms. The outbreak of infection. Epidemiological process. Preventive and repressive anti-epidemic measures. Surveillance. Safety measures when working with biological material. Epidemiology of nosocomial infections. Decontamination. Sterilization. Disinfection. Epidemiology of oncological diseases of the oral cavity and oropharynx. Registers of oncological diseases.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: IK/IM-DM2/15	Course name: Internal Medicine 2
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 6.	
Course level: I.II.	
Prerequisites: IK/IM-DM1/16	
Conditions for course completion: 1. For successful completion of the practical exercises/seminars is required: - To participate at all of practical exercises, theoretical and practical performance of all exercises/seminars, it is possible to complete practical exercises in the Center for Simulator Teaching - To get at least 60 % of total score for ongoing review of written test and the theoretical training to practical exercises. - Two absences are allowed /justified/ 2. For successful obtained of the credits from subject is necessary: - To gain the credit from practical exercises (paragraph 1 above). - Evaluation: Study rules of procedure UPJŠ in Košice, the Faculty of Medicine, Part II, Art13 - The final classification includes the evaluation of the written test and the results obtained in practical exercises	
Learning outcomes: Graduate acquires basic information on investigative methodologies ECG - ECG normal curve, changes in the width and interval of each wave with pathological findings. Students learn skills in the field of musculoskeletal diseases, laboratory diagnostics, hematology and fundamentals of toxicology.	
Brief outline of the course: Principles of clinical electrocardiography, normal ECG, ECG in coronary heart disease pulmonary embolism, electrolyte disturbances etc. X- ray in internal medicine. Chest X-ray.Examination of the musculoskeletal system. Main symptoms of the skeletal disease.Main laboratory investigation in internal medicine /hematological and biochemical investigation/. Mitral stenosis, mitral regurgitation. Aortic stenosis, aortic regurgitation. Most common poisonings. Main clinical symptoms and signs. The current timetable for a given term is published on the electronic bulletin board of the course in AiS2 or on the clinic's website.	
Recommended literature: Kumar and Clark: Clinical Medicine 10th Edition, ELSEVIER 2020

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: IK/IM-DM5/15	Course name: Internal Medicine 5
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 9.	
Course level: I.II.	
Prerequisites: IK/IM-DM4/15	
Conditions for course completion: 1. For successful completion of the practical exercises/seminars is required: - To participate at all of practical exercises, theoretical and practical performance of all exercises/seminars, it is possible to complete practical exercises in the Center for Simulator Teaching - To get at least 60 % of total score for ongoing review of written test /30 questions/ and the theoretical training to practical exercises. 2. For successful obtained of the credits from subject is necessary: - To gain the credit from practical exercises (paragraph 1 above). - Evaluation: Study rules of procedure UPJŠ in Košice, the Faculty of Medicine, Part II, Art13 - The final classification includes the evaluation of the written test and the results obtained in practical exercises - To the state exam bring the student's book with the appreciation	
Learning outcomes: Graduate acquires knowledge from hematology, rheumatology, disorders of the acid-base balance and the so-called. "Varia" (the differential diagnosis of acute conditions in internal medicine, basic immunosuppressive therapy).	
Brief outline of the course: Fever and subfebrility. Focal infection and sepsis. Disorders of the electrolyte metabolism. Treatment with glucocorticoids. Anemias, Leukemia, Myeloproliferative and lymphoproliferative diseases. Platelet disorders. Hemophilia and other coagulation disorders. Rheumatoid arthritis. Systemic lupus erythematosus and other connective tissue diseases. Chest pain, differential diagnosis. Acute cardiology. Shock and syncope. Acute states in gastroenterology and hepatology. Gastrointestinal bleeding. Acute states in endocrinology. Principles of using ATB, corticoid treatment, contraindications and other higher effects. Acute pneumology. The current timetable for a given term is published on the electronic bulletin board of the course in AiS2 or on the clinic's website.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: SK/ MDP-DM/22	Course name: Management of Dental Practice
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 1	
Recommended semester/trimester of the course: 10.	
Course level: I.II.	
Prerequisites:	
Conditions for course completion: Completion of 100% participation in practical exercises and lectures. Continuous review with a record of assessment during clinical teaching. Passing a test from lectures with a minimum rating of 60%. Final test with a grade of at least 60%. The interim assessment for each subject will be registered in AIS. During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%. List of performances during clinical practice: Comprehensive examination of the oral cavity and facial area of an adult patient and proposal of a treatment plan 10 infiltration anesthesia 10 lead anesthesia 10 assistance during a surgical procedure supplementing the endodontic treatment of teeth 5 decapsulation - possibly assistance 5 equalization of the alveolar bone - or. assistance 2 intraoral incision - also assistance 5 suture of extraction wound 2 single-rooted tooth extractions 5 multi-rooted tooth extractions 5 description of x-ray images: 10	
Learning outcomes: Graduates of the course acquire comprehensive information about the establishment, operation and management of a dental clinic and dental practice. Understand the legislation, decrees and regulations related to the practice of the health profession. Become familiar with the organization of postgraduate and lifelong education and the activities of state and professional organizations.	
Brief outline of the course: Conditions for establishing a dental clinic and dental practice. Personnel, equipment and material equipment of the dental clinic. Management of dental practice. Ergonomics in the dental clinic. Three- and four-handed dentistry. Dental clinic hygiene. X-ray equipment and operation in dental practice. Postgraduate education, lifelong continuous education. State organization and professional societies.	

Legislative issues of dental practice, relations with insurance companies, laws, decrees and regulations in connection with the practice of the medical profession.						
Recommended literature: Current articles and contributions from professional dental periodicals, legislative regulations in connection with the implementation of dental practice. Number of ECTS credits: 2					
Recommended semester/trimester of the course: 11., 12..					
Course level: I.II.					
Prerequisites: SK/MFS-DM2/15 and SK/PC-DM3/22					
Conditions for course completion: Obtaining the minimum number of credits for compulsory and compulsory optional subjects in the composition prescribed by the study plan.					
Learning outcomes: The graduate verifies his professional practical and theoretical knowledge from the study of dentoalveolar and maxillofacial surgery in accordance with the completion of the study of dentistry.					
Brief outline of the course: Thematic areas for the subject of state exam. It includes a range of issues such as tooth extractions, surgical treatment of inflammatory conditions in the oral cavity, management of shock and complications in patient care, surgical methods for fractures of the maxillofacial skeleton, knowledge of cancer and their treatment options.

Learning outcomes: The graduate acquires theoretical knowledge and acquires basic practical experience in the field of diagnosis of tumors in the orofacial area, treatment and specifics of treating patients after surgical and oncological treatment of tumors in the orofacial area. It practically assists in surgical interventions.	
Brief outline of the course: Traumatology of the orofacial region: etiology of injuries, clinical signs of injuries, examination principles, first aid. Classification of individual types of fractures. Principles of treatment and complications of bone fracture healing. Orbital injuries. Soft tissue injuries. Gunshot and war injuries. Abrasions and burns. Polytraumas. Specifics of maxillofacial region injuries in children. Assessment activity in case of injuries.

Learning outcomes: The graduate acquires basic theoretical knowledge and practical experience in the field of the etiology of injuries to the orofacial area, participates in their diagnosis, treatment and assessment of injuries to the orofacial area. Acquires knowledge of specific injuries of the maxillofacial region in children. Acquires knowledge about the management of high-risk patients and patients after radiotherapy and chemotherapy. Student practically participates in pre-prosthetic surgery - procedures on soft and hard tissues.	
Brief outline of the course:	

Anomalies of intermaxillary relations. Clefts. Non-inflammatory diseases of the temporomandibular joint, rehabilitation and physiotherapy. Systemic bone diseases with manifestations in the orofacial area. Sudden events in the dental office. Pain in the orofacial area. Function disorders n. facialis and other cranial nerves. Pre-prosthetic surgery. Rational antibiotic therapy of diseases in the orofacial area. Principles of differential diagnosis and biopsy. Cooperation with other departments. Assessment of work incapacity for diseases in the orofacial area. Professional ethics and ethical standards in relation to patients, staff and colleagues.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: ULCHBKB/MBCH-DM2/15	Course name: Medical Biochemistry 2
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 3 Per study period: 28 / 42 Course method: present	
Number of ECTS credits: 6	
Recommended semester/trimester of the course: 3.	
Course level: I.II.	
Prerequisites: ULCHBKB/MBCH-DM1/16	
Conditions for course completion: lectures, seminars, practical exercises, exam; more details: https://www.upjs.sk/lekarska-fakulta/en/departament/medical-and-clinical-biochemistry/education/subjects/dental-medicine/	
Learning outcomes: The graduate will understand the course of biochemical processes of physiological life processes as events taking place in individual organs and tissues of man. He can distinguish basic pathological processes from physiological processes, while he perceives biochemical processes in individual organs and tissues as a part of cellular metabolism. The graduate masters the laws of biochemical regulation of metabolism and learns the basics of clinical-biochemical diagnostics.	
Brief outline of the course: Metabolism of amino acids (e.g. ammonia formation and urea synthesis, biosynthesis of catecholamines). Metabolism of nucleotides. Intermediary metabolism relationships. Nucleic acids (e.g. replication, transcription, translation). Chemical communication in living systems (e.g. hormones). Biochemistry of blood. Pathobiochemical processes in cells. Metabolism of foreign compounds. Composition and chemistry of bones and teeth. Mineralization and demineralization of teeth. Metabolic specificity of teeth (e.g. dental plaque, calculus, caries). Saliva composition and its role. Biochemical processes in oral cavity. Introduction to clinical biochemistry. More details: https://www.upjs.sk/lekarska-fakulta/en/departament/medical-and-clinical-biochemistry/education/subjects/dental-medicine/

Conditions for course completion: Active participation is required. Students are not allowed to have more than 2 absences during the semester. There are 2 written tests (weeks 7 and 13). The result of each test must be at least 60%. Students are given the opportunity to retake the tests in the last week of the semester (week 14). Students with a result lower than 60% are not allowed to register for the final exam, i.e., their final grade is FX. The final assessment is based on the result of the final written exam. Grading scale: A 100-91%, B 90-84%, C 83-75%, D 74-68%, E 67-60%, FX 59%. The study form: in person/distance/combined in accordance with epidemiological situation and the Rector's ordinances.	
Learning outcomes: After completing the course, students are able to communicate with patients in various departments in the hospital. They can take a history using specific questions and giving instructions to the patients depending on the department/clinic.	
Brief outline of the course: Basic Doctor-Patient Communication. Formal and Informal You in Slovak. General Communication Depending on the Environment (Pharmacy, Hospital, Outpatient Department). Basic Medical Anamneses in the Slovak Language - General Anamnesis, Patient Admission. Family History and Past Illnesses. Pain - Time Factors, Types and Causes of Pain. Creating a Medical Report. Drug History - Types of Drugs, Contraindications, Side Effects. Neurological Examination. Unpleasant Examinations. Orthopaedic Examination. Basic Phrases, Creating Dialogues, Reading Comprehension. Surgical Examination. Injuries We Might Encounter at the Department of Surgery- Discussion. Cardiovascular Examination.	
Recommended literature: Materials prepared by teachers in print and electronic forms.	
Course language: Slovak Language A1.1 - A1.2

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: USL/ MEaP-DM/22	Course name: Medical Ethics and Philosophy
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 2 Per study period: 14 / 28 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 3.	
Course level: I.II.	
Prerequisites:	
Conditions for course completion: Attendance on lectures and seminars to the specified extent, successful completion of a credit test and oral exam. Detailed conditions for mandatory participation and forms of evaluation are available on the department's website. https://www.upjs.sk/en/faculty-of-medicine/department/forensic-medicine/teaching/courses/dr/	
Learning outcomes: The student acquires knowledge of ethical dimension and requirements of health care profession, and learns how to recognize principles of medical ethics in solving complicated ethical issues arising during the provision of health care, and specifically in the dental practice.	
Brief outline of the course: Ethics and morality. Bioethics and Medical Ethics. Landmark events in the evolution of bioethics. Global ethics and bioethics. Goals and ethical aspects of health care. Medical ethics. The basic principles of medical ethics. Ethical dilemma. The ethics of medical education. UPJŠ in Košice Code of Student Conduct. Hippocratic Oath. Physician's Pledge. Character requirements for medical profession. WMA International Code of Medical Ethics. Ethical Code for Health Care Providers in Slovakia. Important international conventions and declarations relevant to the health care professions. Patients' rights. Slovak Medical Chamber and Health Care Surveillance Authority in Slovakia. Human dignity in health care. Doctor – patient relationship. Informed consent/refusal – ethical and legal issues. Previously expressed wish of the patient. Communication in medical care. Guide to medical interview. Approach to specific patient groups. Burnout syndrome in medical profession. Ethical and legal issues in pediatrics. The rights of hospitalized children. Elderly patient. Risks in the hospital by elderly patients. Terminal illness. Ethical aspects of resuscitation and intensive care. Futile treatment. Dying patient – ethical and legal issues. Ethical issues in thanatology. Euthanasia and dysthanasia. Assisted suicide. Ethical aspects of organ and tissue transplantation. Living and dead donors. Ethical status of the dead human body. Ethics of autopsy and exhumation. Ethical aspects of examination in forensic medicine and pathology. Reproductive medicine and responsible parenthood. Methods used to achieve or prevent pregnancy. Surrogacy. Ethical issues of abortions. Surrogacy. Ethical and legal issues in dental medicine. Ethical issues in selected medical divisions [neonatal and fetal medicine, gynecology and obstetrics, surgery, nephrology, psychiatry, prehospital emergency care]. Ethics of expert activities in medicine. Ethics	

in biomedical research. Ethical and legal regulations regarding biomedical research involving human subjects. Ethical issues in animal experimentation. Ethics Committees. Publication ethics. Ethical issues in human genetics and genomics. Genetic testing and preimplantation genetic diagnosis. Gene therapy and genetic manipulation. Ethics of 'designer babies'. Ethical aspects of human cloning. Ethical issues in stem cell research and therapy.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: ULI/ MIS-DM1/15	Course name: Medical Informatics and Statistics 1
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 0 / 2 Per study period: 0 / 28 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 3.	
Course level: I.II.	
Prerequisites:	
Conditions for course completion: 1. 100% and active attendance. 2. Min. 60% from each test during the term. 3. Elaboration of all assigned tasks.	
Learning outcomes: The aim of the course is to acquire knowledge about the basic terms, methods and tools of information and communication technologies used in electronic health service. To reach the computer skills at the level, that allows students to use informatics resources in their experimental and/or clinical works. To manage database system, to understand background of clinical information systems and to get skills in basic statistical methods that are used to describe various experimental data.	
Brief outline of the course: Basic terms in informatics, medical informatics, eHealth, electronic health record, ePreskription, eMedication, eAllocation, information systems and data protection, database system, design of database tables, interconnection of database tables, forms in database, types of database forms, working with data in database, creation of queries, reports in database, introduction to statistics, descriptive statistics, measure of location, measure of variability, measure of skewness, measure of kurtosis, data sampling and selection, frequency, introduction to theory of probability, random variables.

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: SK/OD-SS-DM/18	Course name: Orthopedic Dentistry
Course type, scope and the method: Course type: Recommended course-load (hours): Per week: Per study period: Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 11., 12..	
Course level: I.II.	
Prerequisites: SK/O-DM3/22 and SK/PC-DM3/22 and KFBLR/Ph-DM/18 and SK/PD-DM6/15	
Conditions for course completion: Obtaining the minimum number of credits for compulsory and compulsory optional subjects in the prescribed stock of the study plan.	
Learning outcomes: The graduate verifies his professional practical and theoretical knowledge from the study of maxillofacial orthopedics in accordance with the completion of the study of dentistry at the state examination.	
Brief outline of the course: Thematic areas for the subject ŠS. It includes a range of questions from maxillofacial orthopedics and dental prosthetics, as well as known methods of treatment of the causative conditions of maxillo-orthopedic anomalies and treatment of missing teeth in the oral cavity.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: SK/O-DM1/15	Course name: Ortodontics 1
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 2 Per study period: 14 / 28 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 9.	
Course level: I.II.	
Prerequisites: SK/PD-DM3/22	
Conditions for course completion: Completion of 100% participation in practical exercises and lectures Continuous review with a record of assessment during clinical teaching Passing a test from lectures with a minimum rating of 60%. Final test with a grade of at least 60%. The interim assessment for each subject will be registered in AIS. During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%. List of performances during clinical practice: Diagnosis of a patient with an orthodontic anomaly 7 x Jaw-orthopedic analysis of models 5x Maxillofacial orthopedic analysis teleRTG images 5x Entrance jaw-orthopedic examination 5 times Alginate impressions 3x	
Learning outcomes: The graduate acquires knowledge about the basic classification systems of dental anomalies, dental arches and facial bones. He participates in diagnostic examinations in orthodontics. He learns to fill out patient documentation and to evaluate and analyze cephalometric images. He discusses the proposed treatment options for anomalies and the general principles of extraction therapy in orthodontics.	
Brief outline of the course: Ontogenetic development of the orofacial system. Eruption and eruption. Diagnostic examination in orthodontics. Documentation. Classification systems in the diagnosis of anomalies. Causes of jaw-orthopedic anomalies. Treatment options for anomalies. Basics of cephalometric image analysis. Determination of skeletal age. General principles of extraction therapy in orthodontics.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: SK/O-DM2/22	Course name: Ortodontics 2
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 3 Per study period: 14 / 42 Course method: present	
Number of ECTS credits: 4	
Recommended semester/trimester of the course: 10.	
Course level: I.II.	
Prerequisites: SK/O-DM1/15	
Conditions for course completion: Completion of 100% participation in practical exercises and lectures Continuous review with a record of assessment during clinical teaching Passing a test from lectures with a minimum rating of 60%. Final test with a grade of at least 60%. The interim assessment for each subject will be registered in AIS. During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%.	
Learning outcomes: The graduate participates in the analysis of the causes of anomalies and the determination of the diagnosis and treatment plan. Acquires knowledge and theoretical knowledge about fixed and removable devices and their indications and contraindications. He finds out how important the retention phase and extraction therapy are in jaw orthopaedics.	
Brief outline of the course: Types of orthodontic appliances: fixed and removable. Indications of individual species. Removable orthodontic appliances: indication, design elements. Materials used in jaw orthopaedics. Indications of fixed orthodontic appliances. Individual elements and principles of the application. The importance of the retention phase. Extraction therapy in maxillofacial orthopedics.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: KDaD/ PE-DM/15	Course name: Paediatrics
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 7.	
Course level: I.II.	
Prerequisites: IK/IM-DM2/15	
Conditions for course completion: 1. Attendance confirmed by assistant's signature in the record book of the student - it is obligatory to compensate more than one legitimate absence - (in case of 2 absent practical lessons their compensation in the corresponding form shall be determined by the teaching assistant, in case of more than 3 absences the Head of the department shall decide how to compensate) 2. Active participation on practical lessons – estimated by the teaching assistant 3. Practical exam – evaluation of the physical examination of the patient in written form, + final exam (written form - ROGO system) 4. Credits from the subject are going to be administered on the basis of fulfillment of criterias 1-3 during credit week	
Learning outcomes: Students should acquire teoretical and practical skills which are necessary for child's examination. Education is focused on pathological conditions related to dental diseases. Students also should learn the principles of paediatric propedeutics and to evaluate pathological conditions in childhood.	
Brief outline of the course: - The age stages of child development - The peculiarities of anamnesis and a physical examination of a child - The nutrition and the assessment of nutritional status and hydration - Arterial hypertension and infectious endocarditis - The inflammation of the upper and lower respiratory tracts - A malabsorption syndrome - The disorders of the immune system and vaccination - Anemia and the blood clotting disorders - Type I diabetes mellitus and the disorders of calcium-phosphate metabolism - A nephrotic syndrome and pyelonephritis - Acute conditions in Paediatrics

The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%. List of performances during clinical practice: Comprehensive examination of a child patient of preschool age and treatment plan 10 Comprehensive examination of a school-age patient and treatment plan 10 Comprehensive examination and treatment plan for an adolescent patient (15-18 years old) 10 Determination of bone age on an orthopantomogram 10 Sealing tooth fissures 5 Preventive fillings 5 Filling of primary teeth: 5 Filling of permanent teeth: 7 Indirect capping of the dental pulp: 4 Extractions of primary teeth: 4 Extractions of permanent teeth: 3 Mortal treatment of dental pulp: 2 Root canal treatment of primary teeth: 3 Local anesthesia: 5 Mandibular anesthesia: 3	
Learning outcomes: The graduate meets a child patient in the outpatient clinic, with whom he learns to communicate, learns to diagnose and treat tooth decay in deciduous and permanent dentition, and learns to fill out patient documentation. Participates in psychoprophylaxis and psychotherapy of child patients	

Brief outline of the course:

Taking care of the oral health of the young generation. Growth and development of primary teeth, determination of dental age in primary dentition. The role and functions of primary teeth, fluoride and non-fluoride prevention of dental caries in children. Growth and development of permanent teeth, determination of dental age in the permanent dentition. The role of the mixed dentition. Teeth with incomplete development, characteristics of teeth with incomplete development, their treatment. Differences between deciduous and permanent teeth.

Documentation. Psychoprophylaxis and psychotherapy in childhood. Medical preparation of the child before treatment. Cariology of primary teeth, diagnosis, initial stages of dental caries and their treatment. X-ray diagnosis of dental caries. Anesthesia in children, complications and resuscitation. Tooth extractions in children, indication, complications, consequences of premature tooth loss.

Learning outcomes: The graduate is able to provide basic treatment for acute and life-threatening conditions. He can comprehensively examine, diagnose and propose a treatment plan for a child patient. He participates in the treatment of dental injuries in children and the diagnosis of fractures of the facial skeleton,	

inflammations of the lymphatic system and diseases of the salivary glands. He acquires knowledge in the field of genetics in pediatric dentistry.

Brief outline of the course:

Indications for outpatient surgical procedures in children. Dental injuries in children. Fractures of the facial skeleton and first aid for injuries to teeth and facial bones. Inflammation of the lymphatic system. Inflammation of the face in children. Salivary gland diseases. Infectious diseases in children with manifestations in the oral cavity. Symptoms of endocrine diseases in the oral cavity. Manifestations of blood diseases. Growth and development as a determining factor of prevention and therapy in children. Genetics in pediatric dentistry. Comprehensive analysis of the pediatric patient. Professional ethics and ethical standards in relation to patients, staff and colleagues.

During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%. List of performances during clinical practice: - Comprehensive periodontal examination - 7 patients Diagnosis and therapy of diseases of the oral mucosa 3 Diagnosis and therapy of aphthous infections in the oral cavity 3 Diagnosis and therapy of xerostomia 3 Diagnosis and local treatment of general diseases with manifestations on the oral mucosa 3 Removal of tartar - 10 patients Local treatment of gingivitis and periodontitis - 20 patients Description of X-ray - 10 images Assistance with gingivectomy, frenulectomy, vestibuloplasty and apical lobe displacement - 3 patients Polishing the surface of the teeth - 3 patients Instruction on oral hygiene - 10 patients Writing a medical report - 3 patients Control after surgery - 3 patients	
Learning outcomes: Completion of 100% participation in practical exercises and lectures Continuous review with a record of assessment during clinical teaching Final test with a minimum assessment of knowledge at the level of 60% in the relevant semester. List of performances during clinical practice: - Comprehensive periodontal examination - 7 patients	

Diagnosis and therapy of diseases of the oral mucosa 3
 Diagnosis and therapy of aphthous infections in the oral cavity 3
 Diagnosis and therapy of xerostomia 3
 Diagnosis and local treatment of general diseases with manifestations on the oral mucosa 3
 Removal of tartar - 10 patients
 Local treatment of gingivitis and periodontitis - 20 patients
 Description of X-ray - 10 images
 Assistance with gingivectomy, frenulectomy, vestibuloplasty and apical lobe displacement - 3 patients
 Polishing the surface of the teeth - 3 patients
 Instruction on oral hygiene - 10 patients
 Writing a medical report - 3 patients
 Control after surgery - 3 patients

Brief outline of the course:

Etiology of stomatitis and distribution. Bacterial and viral stomatitis. Keratotic and non-keratotic white areas, precancers of the oral cavity. Principles of treating high-risk patients and patients requiring special care: etiopathogenesis, clinical picture, methods of treatment and the importance of recall (diabetes mellitus, cardiovascular diseases, patients treated with immunosuppressants, patients after organ transplantation, oncology patients). Changes in the tissues of the oral cavity during pregnancy, the necessity of the quality of oral health before and during pregnancy, the risk of focal infection during pregnancy for the fetus, the risks of treatment in the oral cavity during pregnancy. Manifestations of HIV in the orofacial area, diagnosis, differential diagnosis. Main principles and principles of treating patients in the orofacial area, the importance of oral hygiene, treatment of tooth decay, periodontal disease, care of oral mucous membranes and salivation. Specific inflammations and their manifestations in the oral cavity, treatment and treatment principles. Professional ethics and ethical standards in relation to patients, staff and colleagues.

University: P. J. Šafárik University in Košice						
Faculty: Faculty of Medicine						
Course ID: UFR/PM-DM1/15		Course name: Pharmacology 1				
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present						
Number of ECTS credits: 3						
Recommended semester/trimester of the course: 5.						
Course level: I.II.						
Prerequisites: UFZ/MP-DM2/15						
Conditions for course completion:						
Learning outcomes: An understanding of pharmacology to an appropriate extent is required of the dentist for the safety of dental practice. Students need to be informed about the sources of information about medicines and their effects in the body, rather than learning too much detail and memorizing lists of active substances. Be able to prescribe a prescription for commonly used drugs.						
Brief outline of the course: Prescription of drugs, practical application.. Basic pharmacology (pharmacokinetic and pharmacodynamic principles), factors influencing drug effects, routes of drug application. Special pharmacology including drugs affecting the autonomic nervous system, myorelaxants and ganglioplegic drugs, drugs affecting CNS (drugs used to treat psychiatric disorders, antiepileptics, antiparkinson drugs, hypnotics).

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: KFBLR/Ph-DM/18	Course name: Physiotherapy
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 9.	
Course level: I.II.	
Prerequisites: UP/PA-DM2/19 and UPF/PP-DM2/15	
Conditions for course completion: https://www.upjs.sk/lekarska-fakulta/vyucbove-zakladne/rehabilitacia/vyucba/predmety/bc/ Prerequisites: Successful completion of the interim study checks and the final exam. Continuous assessment (test, independent work): written test Final assessment (exam): exam, grade A, B, C, D, E, FX. The final evaluation shall take into account the results of the mid-term evaluation and the final evaluation.	
Learning outcomes: The student will acquire the ability to assess the patient's functional status, quality of life. Prescribe the basic modalities of physical and rehabilitation therapy in the framework of dental medicine, educate the patients about physiotherapy and the exercise therapy.	
Brief outline of the course: Modern aspects of physiotherapy and complex rehabilitation. Definition and classification of physical therapy modalities. Effects, indications, contraindications. Examination of the patient and assessment of functions for purposes of rehabilitation treatment. Physical therapy, electrotherapy, phototherapy, thermotherapy. Principles of soft tissue and mobilization techniques. Physical therapy modalities according to type of energy and therapeutic targets. Mobilisation and soft tissue techniques in the orofacial region Basics of kinesiology of the temporomandibular joint, hyoid bone and craniocervical junction. Postisometric relaxation in the orofacial region Application of neurophysiological methods. Rehabilitation of complications after tooth extraction The use of physical modalities. Rehabilitation of orofacial trauma. Rehabilitation of soft tissue injuries in orofacial region. Basic principles and methods of rehabilitation. Rehabilitation of facial bones injuries Basic principles and methods of rehabilitation. Jaw muscles contracture, aetiology, diagnosis, therapy. Dysfunction of temporomandibular joint and physiotherapy. Rehabilitation after temporomandibular joint prosthesis. Neurophysiological methods, rehabilitation principles Rehabilitation of dysphagia. Common physiotherapy treatment techniques. Rehabilitation for cervical spine and central nervous system diseases. Basic myoskeletal approaches Physiotherapy treatment for trigeminal neuralgia. Common physiotherapy treatment techniques Rehabilitation aspects of craniofacial prosthetics . Aesthetic and functional aspects.	

Physiotherapy in functional disorders of the chewing muscles, head fascia, muscle chains. Basic myoskeletal approaches. Functional and psychosocial aspects of rehabilitation in maxillofacial oncology Coping strategies, quality of life.

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: SK/ PreD-DM/22	Course name: Preventive Dental Medicine
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 3 Per study period: 28 / 42 Course method: present	
Number of ECTS credits: 4	
Recommended semester/trimester of the course: 5.	
Course level: I.II.	
Prerequisites: SK/PDM-DM4/15	
Conditions for course completion: Completion of 100% participation in practical exercises and lectures Continuous review with a record of assessment during clinical teaching Passing a test from lectures with a minimum rating of 60%. Final test with a grade of at least 60%. The interim assessment for each subject will be registered in AIS. During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%.	
Learning outcomes: The graduate acquires knowledge and understanding of primary, secondary and tertiary prevention methods. . It develops psychomotor skills by examining directly in the oral cavity - students interact with each other and thus acquire the first basics of examining hard dental tissues and periodontal diseases using standardized WHO methodologies. Students learn the basics of accurate and targeted documentation.	
Brief outline of the course: Definition of oral health and prevention. Work in a dental clinic. Working positions of the dentist, dental assistant and patient in different areas of the oral cavity. Principles of prevention of transmission of infection in the outpatient clinic. Content of extra and intraoral examination of the patient. Saliva, main functions and composition - examination of saliva. Anamnesis and its importance in treating patients. Tissues of the periodontium. Gingiva. WHO periodontological probe. Frenulum labii and accessory frenulum (lateralis) – clinical anatomy and examination of attachment, its etiopathogenesis in the etiology of periodontal diseases. Plaque: definition, composition and its etiopathogenesis in the occurrence of diseases of the oral cavity. Plaque detection. Plaque index. Pathology of sulcus gingivalis. Bleeding during examination of sulcus g., BoP, Recessus gingivalis, loss of attachment, classification of root furcations. Tooth mobility, basic occlusal diagnostics and basic sled movements. Vitality of the tooth. Dental caries, definition, diagnosis. Stains, enamel, enamel hypoplasia. DMF – T, DMF – S, dmft , dmf-s. Radiological diagnosis of dental caries. Radiological decay index DMF-S. PBI, CPITN. Importance of oral	

hygiene for oral health, patient motivation and instruction. Ensuring optimal oral hygiene with regard to BoP and PBI values. Tartar. Initial determination of individual prophylaxis. Professional teeth cleaning. Reconstruction and polishing of restorations to remove marginal irritations. Local methods of dental fluoridation.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: IK/PM-DM/22	Course name: Preventive Medicine
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 8.	
Course level: I.II.	
Prerequisites:	
Conditions for course completion: 1. For successful completion of the practical exercises/seminars is required: - To participate at all of practical exercises, theoretical and practical performance of all exercises/seminars. - To get at least 60 % of total score for ongoing review of written test or the theoretical training to practical exercises. - Two absences are allowed /justified/ 2. For successful obtained of the credits from subject is necessary: - To gain the credit from practical exercises (paragraph 1 above). - Evaluation: Study rules of procedure UPJŠ in Košice, the Faculty of Medicine, Part II, Art13 - The final classification includes the evaluation of the written test and the results obtained in practical exercises	
Learning outcomes: The graduate acquires knowledge in the field of prevention in cardiology, the field of obesity prevention, and metabolic syndrome. Acquires knowledge in the field of infectious disease prevention and tumor prevention.	
Brief outline of the course: Preventive medicine, definition, organization, education, public health. Physical exercise – how much is too much. Prevention of obesity, nutrition. Preventive cardiology. Metabolic syndrome as a cardiovascular risk factor. Cancer – epidemiology, statistics, prevention. Prevention of Internal diseases from the perspective of patients with dental diseases. The current timetable for a given term is published on the electronic bulletin board of the course in AiS2 or on the clinic's website.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: SK/PC-DM1/22	Course name: Professional Clerkship 1
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: Per study period: 80s Course method: present	
Number of ECTS credits: 3	
Recommended semester/trimester of the course: 4.	
Course level: I.II.	
Prerequisites:	
Conditions for course completion: earning credits based on performances 1. Preparation of a dental set and an ambulance for a dentist's daily practice. 2. Application of hygiene regulations in the dental clinic. Hygiene of the dental set, dental chair, disinfection and sterilization of instruments. 3. Preparation of instruments and hygiene of the dental set and chair for individuals patients. 4. Practical principles of disinfection and sterilization. 5. Preparation and mixing of various dental materials – temporary, underlay and permanent filling materials. 6. Preparation of local anesthetic before administration of local anesthesia. Preparation instruments for tooth extraction and dentoalveolar surgical procedures. 7. Preparation of impression materials, mixing techniques and principles, impression transport to dental technology. 8. Preparation and recording of the patient's medical documentation.	
Learning outcomes: The graduate will acquire practical skills in handling dental equipment. He will become familiar with complete instrumentation, principles of sterilization and disinfection. Participates in the preparation of materials used in dentistry and acquiring knowledge while assisting procedures in the dental clinic.	
Brief outline of the course: Preparation of the dental clinic for daily operation: preparation of instruments, materials, local anesthesia. Disinfection and sterilization of instruments. Basics of keeping medical records, preparing the surgical table for operations. Hygienic cleaning of the dental clinic according to the prescribed weekly schedule. As part of the work in the inpatient department: care of the patient's oral cavity, administration of medications, basics of nursing documentation, serving food to patients

Course level: I.II.	
Prerequisites: Dek. LF UPJŠ/SL-DM4/15	
Conditions for course completion: earning credits based on performances 1. Casting anti-bite and study impressions with plaster II. type – 5x. 2. Casting and processing impressions with extendable pins (PIN-DEX system) - plaster III. and IV. type - at least 2x in cooperation with a dental technician. 3. Modeling simpler pillar constructions from wax and cementing them - method of lost wax in cooperation with a dental technician (minimum 2x), casting of models. 4. Faceting of cast and machined fixed crowns and bridges with special resins (K+B, photocomposite systems) under the guidance of a dental technician (minimum 1x). 5. Processing and polishing of finished fixed works before handing over to the patient (minimum 3 times). 6. Duplication of models (including unblocking of underrunning spaces) during production ČSN (minimum 1x). 7. Preparation of shellac plates and wax rolls as part of the work procedure in the removable room prosthetics (minimum 2x). 8. Work with an articulator - fixing working models, building teeth at ČSN and TN (at least 2x). 9. Laboratory completion of restorations - cuvetization of wax restorations, washing out of wax, resin dough pressing, polymerization, processing and polishing of finished ČSN and TN (minimum 1x ČSN and 1x TN). The listed 9 basic laboratory procedures are mandatory Other - optional laboratory procedures according to the level of laboratory equipment include metal ceramics, ceramics of the Zircon and Turkom-Cera type, vertical and horizontal retention ČSN systems (plug-in joints, support calipers, telescopic crowns), preliminary and definitive analysis of models in the planning and construction of ČSN with a metal frame, repairs fixed and removable restorations, atypical solutions of total restorations (hybrid restorations) and similarly in a demonstration form.	
Learning outcomes:	

The graduate will gain practical knowledge and verify theoretical knowledge in the dental technology clinic, get to know the work of dental technicians and master individual work procedures in the production of all types of dental prostheses.						
Brief outline of the course: Organization of work in a dental laboratory, principles and function of individual devices. Casting plaster casts, processing plaster models. Modeling of individual types of crowns and bridges. Sealing to the core. Processing of metal structures, bridges. Work procedures for partially removable and total restorations. The importance of working with different types of articulators for high-quality dental restorations. Definitive processing of partial and total removable restorations.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: SK/PC-DM3/22	Course name: Professional Clerkship 3
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: Per study period: 120s Course method: present	
Number of ECTS credits: 4	
Recommended semester/trimester of the course: 10.	
Course level: I.II.	
Prerequisites: SK/CD-DM4/09 and SK/PD-DM4/15 and SK/PE-DM2/22 and SK/PaD-DM2/22 and SK/O-DM2/22 and SK/DS-DM3/15 and Dek. LF UPJŠ/SL-DM4/15	
Conditions for course completion: test, finished modeling according to the practical minimum getting credits 1. Comprehensive examination of the patient: anamnesis, examination of dental status and determination of KPE index, CPITN, PBI, determination of maxillo-orthopedic anomalies of tooth position, oncological examination of the oral cavity and dental position anomalies, oncological examination of the oral cavity 2. Instruction and motivation of patients about oral hygiene with subsequent control 3. Removing tartar, polishing the surface of the teeth 4. Conservative treatment of chronic gingivitis 5. Forms of local prevention of tooth decay 6. Making fillings in I., II., III. and V. Black's class, amalgam treatment, glass ionomer cement, photocomposite 7. Direct and indirect coverage of the dental pulp 8. Treatment of dental pulp hyperemia, partial pulpitis 9. Extirpation, anesthetization of the dental pulp in frontal teeth and root canal treatment canal and making a root filling 10. Administration of individual types of local anesthesia in the oral cavity 11. Simple tooth extractions 12. Treatment of post-extraction complications 13. Conservative treatment of dentitio difficilis 14. Resection of the root tip - assistance 15. Indications for intraoral incision – practical implementation and subsequent treatment 16. Fabrication of all types of mantle crowns, aesthetic crowns for vital ones teeth 17. Fabrication of the stud superstructure 18. Fabrication of flushing and simple contact bridges 19. Fabrication of removable partial dentures with dentomucosal transfer of masticators strength	

20. Making total compensations						
Learning outcomes: The graduate expands his practical experience and independently performs basic tasks in the practice of a practical dentist, including practice management, reporting and health insurance companies. The student works at the chair, under the expert guidance of the dentist. He treats patients in the framework of conservative dentistry, prosthetic dentistry and dentoalveolar surgery.						
Brief outline of the course: Application of methods of primary prevention of tooth decay and periodontal disease. Treatment of dental caries and dental pulp in adult and pediatric patients. – indication and diagnosis. Diagnosis of gingivitis and periodontitis, determination of treatment plan, conservation treatment of periodontal disease. Prosthetic treatment of teeth with simple fixed bridges, partial and total removable replacements. Simple tooth extractions. Conservative treatment of dentitio difficilis. Diagnosis and therapy, complications during and after tooth extraction. Dentist practice management system, reporting, ensuring workplace hygiene.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: SK/ PDM-DM3/15	Course name: Propedeutics of Dental Medicine 3
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 4 Per study period: 28 / 56 Course method: present	
Number of ECTS credits: 7	
Recommended semester/trimester of the course: 3.	
Course level: I.II.	
Prerequisites: SK/PDM-DM2/22	
Conditions for course completion: Completion of 100% participation in practical exercises and lectures Continuous review with a record of assessment during clinical teaching Passing a test from lectures with a minimum rating of 60%. Final test with a grade of at least 60%. The interim assessment for each subject will be registered in AIS. During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%.	
Learning outcomes: The graduate of the course acquires detailed theoretical knowledge and practical skills related to endodontics and dental prosthetics. Understands the basic work procedure for making dental restorations. The graduate of the course will master the impression technique, and can use the acquired theoretical knowledge when working on models and phantoms.	
Brief outline of the course: Inlays and onlays. Basics of gnathology. Content of the prosthetic part of propaedeutics. The roles of dental prostheses and the importance of replacing missing teeth with prosthetic works. . Biological factor. Division and classification of dental defects - according to Wild Voldřich and according to Kennedy. Classification of prosthetic replacements and their biodynamics. Prosthetic instruments and devices used in the clinic used for making models in the laboratory. Devices for processing metal alloys. Preparation of teeth for crown replacements. Cast metal crown. Non-metallic crowns. Pivot superstructure. Work procedures for making a fixed bridge in the maxilla and mandible.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: SK/ PDM-DM4/15	Course name: Propedeutics of Dental Medicine 4
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 4 Per study period: 28 / 56 Course method: present	
Number of ECTS credits: 8	
Recommended semester/trimester of the course: 4.	
Course level: I.II.	
Prerequisites: SK/PDM-DM3/15	
Conditions for course completion: Completion of 100% participation in practical exercises and lectures. Continuous review with a record of assessment during clinical teaching. Passing a test from lectures with a minimum rating of 60%. Final test with a grade of at least 60%. Conditions for granting credit: 100% communication with the teacher. The interim assessment for each subject will be registered in AIS. During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%.	
Learning outcomes: The graduate of the subject obtains comprehensive information about working procedures in the outpatient clinic and dental technology in the production of fixed and removable restorations within the framework of dental prosthetics. He acquires skills in the preparation of hard dental tissues within the framework of cariology and endodontics. Get acquainted with the basics of X-ray diagnostics. Understanding the principles of applying local anesthesia. Get familiar with surgical instruments and basic extraction techniques. He can use the acquired theoretical knowledge when working on models and phantoms.	
Brief outline of the course: Reception, translation, discharge of the patient, sterilization and disinfection, use of heat and cold. Monitoring of vital functions, monitoring of urine and stool emptying, administration of drugs, infusions and transfusions. Tooth replacements: fixed bridge, indications, work procedure, impression technique, structural elements of contact bridges, laboratory preparation. Removable replacements: classification, types. Partial removable replacements: division, description of structural elements. Office and laboratory work procedure. Total removable restoration: description of issues of retention and stability. Office and laboratory work procedure. Equipment and organization of work in a dental clinic. Work hygiene in the ambulance, security conditions. Filling of maxillofacial surgery. Terminology of surgical procedures. Surgical instruments – extraction forceps, extraction levers, general surgical instruments. Basic principles of local anesthesia.	

Principles of tooth extraction. Basic terminology in maxillofacial orthopaedics: anomalies of the position of the teeth in the dental arch - basic terminology, anomaly of the relative position of the dental arches of the jaws.

Final test with a grade of at least 60%. The interim assessment for each subject will be registered in AIS. During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%. List of performances during clinical practice: Comprehensive prosthetic treatment plan. 10 patients indicated treatment of the prosthetic procedure: 10 patients evaluation of radiograms - 15 preparation of abutment teeth - 15 making impressions in fixed prosthetics - 7 work procedure of partially removable and total replacement 4 making impressions in removable prosthetics 5	
Learning outcomes: The graduate acquires knowledge in the field of diseases of the temporomandibular joint, participates in the diagnosis and treatment of these diseases. He acquires new knowledge in the field of application of modern procedures and materials in prosthetic treatment, such as implants or zirconium and metal-ceramic dental prosthetics.	
Brief outline of the course: Implants: development, principles, prosthetic indication, work procedure, choice of materials. Articulation devices and their practical use in prosthetic treatment and assessment of changes in periodontal tissues. Disorders of temporomandibular joint function, etiology, diagnosis and treatment, importance of differential diagnosis in solving pain in the facial area. Metal ceramics: structure of materials and their processing, rational procedures in metal ceramics, use of photocomposite resins in prosthetics. Prosthetic materials based on zirconium, their advantages and indications for use. Price calculations of prosthetic products. Professional ethics and ethical standards in relation to patients, staff and colleagues.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: 1. PK/ PT-DM/16	Course name: Psychiatry
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 8.	
Course level: I.II.	
Prerequisites: 1. PK/PMC-DM/18 and UPF/PP-DM1/15	
Conditions for course completion: 1. Student has to attend minimally 85% of the practical lessons and minimally 50% of the lectures. In the case of absence, may substitute up to 2 practical lessons per semester. 2. Evaluation: active participation in practicals; permanent study check (control question). Successful completion of the written test - minimum 60% .	
Learning outcomes: The aim is to learn ethiology and pathophysiology of mental disorders, psychopathology, principles of classification in psychiatry, syndromes of mental disorders, diagnosis and treatment of mental disorders and communication with mentally ill patients. Student is skilled in making the diagnosis, differential diagnosis and basics of therapy of specific groups of mental disorders, first aid in psychiatry. He/she has knowledges about legal and ethical issues of mentally ill. Students fulfil requirements for communication with mentally ill patients and communication with another specialists and psychiatrists as well.	
Brief outline of the course: - psychiatry - history of psychiatry and its content - etiology and pathophysiology - psychopathology, signs and symptoms of mental disorders /disturbances of perception, mood, thinking, memory, motor activity and behavior, intelligence, consciousness and attention, personality/ - diagnosis in psychiatry, syndromes of mental disorders - principles of classification in psychiatry - treatment of mental disorders – biological treatment and psychopharmacology - psychotherapy, psychoeducation and rehabilitation in psychiatry - communication with mentally ill patients and communication with another specialists and psychiatrists - schizophrenia and schizophrenia - like disorders - mood disorders – focus on depression - organic and symptomatic mental disorders, cognitive disorders - reactive (stress-related) mental disorders, anxiety, OCD, somatoform and dissociative disorders,... - alcoholism and other substance use disorders - mental disorders of childhood and adolescence	

<ul style="list-style-type: none"> - geriatric psychiatry - personality disorders, behavioral syndromes - legal and ethical aspects referring to psychiatric patients, social psychiatry

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: 1. PK/ PMC-DM/18	Course name: Psychology and Medical Communication
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 3	
Recommended semester/trimester of the course: 3.	
Course level: I.II.	
Prerequisites: ULBL/MHB-DM1/15	
Conditions for course completion: 1. At least 100% active participation is obligatory on the practical lessons. The most 2 practical lessons are allowed to compensate when legitimate absences occurred during the semester. Compensating is forbidden 1 week before credit week. 2. 70% success in continuous compounding of the study, and 80% success in the examination in written form as the assessment of the study during semester.	
Learning outcomes: Get knowledge in basic psychological terminology, stressing clinical psychology, and its application in different medical settings. Basic orientation in main theories of personality and models of psychopathology. Psychodiagnostics and its use in clinical practice in specific medical situations, considering specific mental health changes. Psychotherapy – gain orientation in basic psychotherapeutic approaches, in basic psychotherapeutic methods. Possibilities and limits of psychotherapy in medical specializations. Bio-psycho-social model of health and illness. Psychosomatic disorders and their management. Theoretical and practical knowledge of principles of effective verbal and nonverbal communication in general, as well as their implementation in difficult interpersonal situations (partner, professional relationships, relationship patient-physician, physician-patient's relative).	
Brief outline of the course: <ul style="list-style-type: none"> • Psychology as a profession, theoretical and application disciplines, clinical psychologist as a member of the diagnostic and therapeutic team • Problem of personality, main theories of personality, and main models of psychopathology. The problem of normality • Psychodiagnostics – basic methods used in clinical practice, their indication and practical contribution in the process of treatment • Psychotherapy – main theories and schools. Basic methods of psychotherapy. Indications of psychotherapy considering the specific disorder. • Bio-psycho-social model of illness and health, psychosomatic disorders, behavioral medicine, psychohygiene. • Verbal and nonverbal communication, principles of effective communication. Management of difficult situations in medical practice. 	

Recommended literature: 1. 100 % aktívna účasť na praktických cvičeniach, v prípade neprítomnosti možná náhrada maximálne 2 cvičení za semester. 2. Dosiahnutie minimálne 70 % úspešnosti testu priebežného hodnotenia a 80% úspešnosti testu záverečného hodnotenia za daný semester.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice					
Faculty: Faculty of Medicine					
Course ID: CJP/LFSM/16		Course name: Slovak Language in Medicine			
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present					
Number of ECTS credits: 2					
Recommended semester/trimester of the course: 4., 6.					
Course level: I.II.					
Prerequisites: Dek. LF UPJŠ/SL-DM2/15 or Dek. LF UPJŠ/SL-GM2/15					
Conditions for course completion: Students are required to attend classes according to the schedule. Active participation is required. Students are not allowed to have more than 2 absences during the semester. Students are expected to be on time to class. In case of late arrivals which happen more than 3 times, students are given an absence. There are 2 written tests (weeks 7 and 13). The result of each test must be at least 60%. Students are given an opportunity to retake the tests in the last week of the semester (week 14). Students with a result lower than 60% in the summer semester are not allowed to register for the final exam, i.e., their final grade is FX. The final assessment is based on the result of the final written exam. Grading scale: A 100-91%, B 90-84%, C 83-75%, D 74-68%, E 67-60%, FX 59% and less. The study form: in person/distance/combined in accordance with the current situation and Rector's ordinances.					
Learning outcomes: Consolidation of students' language skills, students will learn grammatical and lexical structures and stylistic characteristics of specialised written and oral discourse at A2.1 level.					
Brief outline of the course: Selected grammatical and lexical structures and stylistic characteristics of specialised written and oral discourse. Grammatical tenses and cases. Word-formation. Imperative forms. Phrasal idioms and phrases in medicine. Medical history taking.					
Recommended literature: Materials prepared by the teacher.					
Course language: Slovak language A2

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: ÚTVŠ/ ŠALF 1/22	Course name: Sport 1
Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 1	
Recommended semester/trimester of the course: 3., 5., 7.	
Course level: I., I.II., II.	
Prerequisites:	
Conditions for course completion: Condition for successful course completion: - active participation in line with the study rule of procedure and course guidelines - students must meet the requirements to 80%	
Learning outcomes: Sports activities in all their forms prepare university students for their further professional and personal life. A personal experience allows them to understand the importance of physical activity for life. Sports actively influence physical fitness and performance, help to maintain mental health, and improve the health of those engaged in sport. The skills and abilities acquired and improved during exercise, strengthen students' relationships toward physical activities and provide an opportunity to affect their near and the wider environment in a selected sport activity. Content standard: The student demonstrates relevant knowledge and skills in the field, which content is defined in the course syllabus and recommended literature. Performance standard: Upon completion of the course students meet the performance standard and: - acquire movement skills in a particular sport, basic skills and complex skills in sport games and swimming competency - increase the level of speed, endurance, power and agility, overall fitness and performance - can apply the exercises in practice, - can apply a specific health-oriented programme to target health problems - can apply acquired knowledge and skills in the sport development process and leisure time	
Brief outline of the course: Brief outline of the course: The Institute of physical education and sport at the Pavol Jozef Šafárik University offers 20 sports activities aerobics; aikido, basketball, badminton, body-balance, body form, bouldering, floorball, yoga, power yoga, pilates, swimming, fitness, indoor football, SM system, step aerobics, table tennis, chess, volleyball, tabata, cycling. Additionally, the Institute of physical education and sport at the Pavol Jozef Šafárik University offers winter courses (ski course, survival) and summer courses (aerobics by the sea, rafting on	

the Tisza River) with an attractive programme, sports competitions with national and international participation.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Medicine	
Course ID: SK/ CAOR-DM/23	Course name: Topographic Anatomy of the Oro-maxillofacial Region
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course: 5.	
Course level: I.II.	
Prerequisites: UA/A-DM2/15	
Conditions for course completion: Completion of 100% participation in practical exercises and lectures Continuous review with a record of assessment during clinical teaching Passing a test from lectures with a minimum rating of 60%. Final test with a grade of at least 60%. The interim assessment for each subject will be registered in AIS. During the practical exercises, the student is evaluated by the teacher, each continuous evaluation is recorded in the AIS. The evaluation of the final test for the lectures will be recorded in AIS. The minimum threshold for meeting the conditions for passing the test for lectures is 60%. The minimum threshold to meet the conditions for passing the subject is 60%.	
Learning outcomes: Graduates acquire knowledge of the relationships of anatomical structures and individual topographical regions important for the emergence and spread of pathological processes in the head and neck area. Through practical exercises, they will learn to apply anesthesia in the head and neck area.	
Brief outline of the course: Head and neck area. Masticatory muscles and their influence on the dislocation of sled fragments. Mimic muscles of the face, function and involvement of muscles in facial expressions. Blood supply to the face. Places of compression and ligatures during bleeding. Motor and sensory innervation of the orofacial area. The relationship of the maxillary cavity and the teeth of the upper dentition. Lymphatic system of the face and neck. Functional morphology of the temporomandibular joint. Large salivary glands. Anatomical variations in the innervation of the mandible and sled and their influence on the failure of injection anesthesia. Static and dynamic skin tension - the most suitable places and directions of incisions in the facial area.
