<b>Course ID:</b> ÚBEV/	Course name: Animal Physiology
FZ1/10	

# Course type, scope and the method:

**Course type:** Lecture / Practice

Recommended course-load (hours): Per week: 3 / 3 Per study period: 42 / 42

Course method: present

Number of ECTS credits: 7

### Recommended semester/trimester of the course: 6.

Course level: I.

Prerequisities: ÚBEV/HIS1/15 or ÚBEV/HISE1/15

### **Conditions for course completion:**

Active participation on practicals.

Passing the test in recognition of microscopical preparations (min. 50% of correct identification and description)

Passing the final examination of knowledge and practical skills from the content of practicals. Oral examination.

#### Learning outcomes:

To provide students with basic knowledge on the physiological processes in animals on different levels of the phylogenesis. Learn the principles of their control, aimed to secure the inner integrity of the animal and to its adaptation to the environment. To point out the unity of the structure (on the molecular, cellular, tissue and organ levels) and of the functions of the body.

#### **Brief outline of the course:**

- 1. Basic physiological principles. Homeostatic mechanisms.
- 2. Physiology of blood and hemopoetic organs.
- 3. Physiology of respiration.
- 4. Thermoregulation.
- 5. Physiology of cardio-vascular system.
- 6. Physiology of the gastro-intestinal system.
- 7. The functions of the liver.
- 8. Physiology of nutrition and the energetic metabolism. The water and mineral household.
- 9. General neurophysiology.
- 10. Sensory and motoric functions of the nervous system. Associative functions of the brain.
- 11. Physiology of excretion. The work of the muscles.
- 12. Sensory physiology.
- 13. Hormonal regulation. Physiology of reproduction.
- 12. Sensory physiology.

Course ID: ÚCHV/	<b>Course name:</b> Basic Chemistry
ZAC2/10	

Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours):

Per week: 2 / 2 Per study period: 28 / 28

Course method: present

Number of ECTS credits: 6

**Recommended semester/trimester of the course:** 1.

Course level: I.

Prerequisities:

#### **Conditions for course completion:**

1. Participation in lectures and seminars.

2. Activity at seminars. The student must have mastered the theory of the lecture that will be discussed at the seminar.

3. Exam: test in inorganic chemistry (max. 50 p, min. 26 p) and test in organic chemistry (max. 50 p, min. 26 p).

4. The rating scale is determined as follows: A (100-91%), B (90-81%), C (80-71%), D (70-61%), E (60-51%), Fx (50- 0%).

#### Learning outcomes:

The main goal of this subject is to provide a basic overview of general, inorganic and organic chemistry for biology students.

#### Brief outline of the course:

Introduction to general and inorganic chemistry. Periodic systems of elements and periodicity. Atomic structure. Electron configuration, Chemical bonds. Relationship between structure and properties of substances. Transition and non transition elements and their compounds. Coordination and biocoordination compounds. Basic chemical calculations and balancing of chemical equations. Elements essential for living organisms and their function. Biometals. Biominerals. Introduction to organic chemistry. Saturated and unsaturated hydrocarbons and their derivatives. Heterocyclic compounds. Carbohydrates. Lipids. Aminoacids and proteins. Enzyms and vitamins. Nucleic acids.

#### **Recommended literature:**

1. Mária Reháková, Základy chémie pre biológov, časť anorganická chémia. Interný učebný text. PF UPJŠ, Košice 2012.

2. P. Segl'a, I. Potočňák, V. Jorík, J. Švorc, M. Tatarko, Anorganická chémia: Základy anorganickej chémie, 2020.

3. J. Krätsmár-Šmogrovič kolektív, Všeobecná a anorganická chémia, Osveta, 2007.

4. Hrnčiar P.: Organická chémia, UK Bratislava 1997.

#### Course language:

SK - slovak

Notes:

The subject is carried out in person or, if necessary, remotely using the online platform Big Blue Button (BBB) or MS Teams. The form of teaching is specified by the teacher at the beginning of the semester and updated continuously.

#### Learning outcomes:

The aim of the course is to provide the basics of psychopathology and pathopsychology of child development. The absolvent of the course has theoretical knowledge about childhood developmental disorders, which can be used in practice in the context of knowledge from other subjects. In addition, the absolvent of the course also has an overview of current knowledge based on the latest research and evidence-based methods.

The graduate of this course will acquire the following competencies:

-distinguish mental disorders of children and adolescents,

- perceive the differential-diagnosis specifics of psychopathology in children,

- be familiar with the specifics of mental development in children and adolescents,

- take into account the specifics of the differential diagnosis of psychopathology in children depending on age.

The information will be yearly specified on the electronic noticeboard of the course in AiS2, aleternatively in LMS UPJŠ or MS Teams environment.

### **Brief outline of the course:**

Approaches to Child Psychopathology. Developmental Psychopathology.

Normal Development: What is actually normal? Insecure attachment and related difficulties.

Pathopsychology (Monika)

Attention-Deficit Hyperactivity Disorder (ADHD). Cognitive Impairment.

Autism Spectrum Disorder.

Antisocial Behaviour.

Fear and Anxiety.

Depression.

Eating disorders.

Substance use disorders.

Schizophrenia. Personality disroders.

Child maltreatment. Divorce, separation and loss.

The information will be yearly specified on the electronic noticeboard of the course in AiS2, aleternatively in LMS UPJŠ.

discipline that deals knowledge related to properly understand an overview of the m discipline but also pra The main goal of so knowledge, connect	the course is to acquaint students with cognitive psychology, as a scientific with the study of human cognition, and to provide them with the current o human cognition. In addition, the course also emphasizes the ability to this knowledge and apply it. For this purpose, the course provides not only main theories of selected cognitive processes and the broader context of the actice: practical illustrations and systematic encouragement of critical thinking, eminars is to train the ability to use and adequately present the acquired this knowledge to other related areas, think about it independently, discuss it t not least, to flexiblty and cretively solve various related model activities.					

Knowledge: Students will gain an overview of the history and development of cognitive psychology, including major theories and models. They will acquire knowledge about cognitive processes such as perception, attention, memory, learning, thinking, and language. They will be familiar with the main paradigms of thinking about these cognitive processes and the research methods used in cognitive psychology.

Abilities: Students will develop the ability to think about cognitive processes within the framework of selected theoretical models. They will be able to apply cognitive psychology theories to real-life situations and problems. They will gain the skill to design and conduct experiments to investigate cognitive processes. Students can build upon the acquired abilities and further develop them in subsequent courses.

Skills

Students will be able to use the principles of cognitive psychology to solve practical problems. They will understand optimally functioning cognitive processes as well as their natural limits and will be able to effectively communicate concepts and research findings in the field of cognitive psychology. They will be prepared to critically follow current developments and research in cognitive psychology.

The information will be yearly specified on the electronic noticeboard of the course in AiS2, alternatively in LMS UPJŠ or MS Teams environment.

### Brief outline of the course:

History of cognitive psychology. Research of cognition in the period of psychology as a scientific discipline. The emergence of cognitive psychology.

Cognition - general characteristics. Structure of cognitive processes. Paradigms in cognitive psychology: S-R scheme, information processing model, evolutionary approach, connectionist approach. Stimuli and mental representations.

Perception - sensory processes. Perception - organization of the perceptual field, object recognition, specific types of perception.

Attention - selection and division of attention. Theories of attention. Automatic and controlled processes and attention.

Memory - models, types of memory, memory processes.

Learning - classical conditioning, operant conditioning and other types of learning.

Mental representations and ideas. Thinking – concepts and operations. Language and thinking. Thinking and speech.

Judgment, decision making, problem solving, creativity. Current research of cognitive processes.

The information will be yearly specified on the electronic noticeboard of the course in AiS2, alternatively in LMS UPJŠ or MS Teams environment.

Prerequisities:

#### **Conditions for course completion:**

Active participation in class and completed homework assignments. Students are allowed to miss 2 classes at the most (2x90 min.). 2 control tests during the semester. Final grade will be calculated as follows: A 93-100 %, B 86-92%, C 79-85%, D 72-78%, E 65-71%, FX 64 % and less.

#### Learning outcomes:

The aim of the course is to identify and eliminate the most frequent grammatical errors in oral and written communication, learning language skills of listening comprehension, speaking, reading and writing, increasing students 'language competence (acquisition of selected phonological, lexical and syntactic knowledge), development of students' pragmatic competence (acquisition of the ability to express selected language functions), development of presentation skills, etc.

#### **Brief outline of the course:**

The course is aimed at practicing and consolidating knowledge of morphology and syntax of German in order to show the context in grammar as a whole. The course is intended for students who often make grammatical errors in oral as well as written communication. Through the analysis of texts, audio recordings, tests, grammar exercises, monologic and dialogical expressions of students focused on specific grammatical structures, problematic cases are solved individually and in groups. Emphasis is placed on the balanced development of grammatical thinking in the communication process, which ultimately contributes to the development of all four language skills.

Prerequisities:				

#### **Conditions for course completion:**

Lectures and practical exercises, original drawing of some parts of animal body or it derivates, examination.

#### Learning outcomes:

The student will acquire basic knowledge about the principles of building the animal body from the simplest protostomian invertebrates to vertebrates. Despite the huge taxonomic diversity of animals, their bodies can be interpreted by a relatively limited number of building principles that correspond to the systematic position of the examined animal and functional adaptations to the environment and way of life. The subject examines the structure of the body at the level of organs and organ systems, by applying the method of comparison it seeks general principles and also peculiarities. It is also important to get acquainted with the principal terms, which the student will use in the spectrum of other study subjects.

#### Brief outline of the course:

Ruppert, E. E., Fox, R. S., & Barnes, R. D., 2004: Invertebrate zoology: a functional evolutionary approach. Belmont, CA: Thomas-Brooks/Cole.

#### **Course language:**

#### Notes:

The study of the animal body structure of animals is a very old scientific discipline that has accumulated a vast amount of detailed knowledge. Comparing them is not only a way to put the knowledge into a comprehensive system, but mainly a way to find general anatomical rules that are tied to one of the animal's phylogenetic linneage or have general validity and reveal the degree of phylogenetic relationship of animals or the degree of adaptation to the environment

and a way of life. A brief summary of the phylogeny of the animal body building plan and organ systems using the knowledge of classical and modern comparative morphological approach, supported by knowledge of embryology and molecular data for interpretation of the phenotype are the content of this course.

strengths and weaknesses in conflict management. In a short presentation of their reflection, in the form of deconstruction, students will describe their strengths and weaknesses in the management of conflict situations with a focus on the application of knowledge, skills and competences needed in conflict situations in the work environment and the school environment.

The evaluation of the course and its subsequent completion will be based on clearly and objectively set requirements, which will be set in advance and will not change. The aim of the assessment is to ensure an objective and fair mapping of the student's knowledge while adhering to all ethical and moral standards. There is no tolerance for students' fraudulent behavior, whether in the teaching process or in the assessment process.

#### Learning outcomes:

Successful mastery and demonstration of knowledge in the field of conflict management and control of basic rules.

The method of teaching the subject will be oriented to the student. Lecturers will be interested in students' needs, expectations and opinions so as to encourage them to think critically by expressing respect and feedback on their opinions and needs.

The content of the curriculum will be based on primary and high-quality sources that will reflect the topicality of the topics so as to ensure the connection of the curriculum with other subjects and also the connection of the curriculum with practice. Students will be expected to take an active approach in lectures and seminars with an emphasis on their independence and responsibility.

The student is able to demonstrate an understanding of an individual's behavior in various conflict situations. The student is able to describe, explain and evaluate their own internal resources, competencies as well as limitations and weaknesses that are directly related to conflict management. The student is able to apply theoretical knowledge and principles of conflict resolution to everyday situations.

After completing the course, students will be able to: a) express and summarize basic knowledge related to conflict management; b) understand the basic rules and dynamics of the origin, course

and termination of the conflict; c) apply knowledge in practice, e.g. in the school environment; d) apply key competencies that increase the possibilities of their application in all areas of practice with a special focus on the work of a teacher. They will acquire knowledge from the theory of conflict management as well as capabilities and competences for solving them, e.g. in the context of school teams.

#### Brief outline of the course:

Disputes and their causes (Types of disputes, External influences, Be able to reveal the causes of disputes), Dispute origin (Levels of disputes, Escalation warning signals, Escalation removal strategies, Know how to explain escalation stages; How do I approach a dispute?) Dispute Resolution, Dispute Resolution Strategies, Dispute Discussion, Dispute Settlement Initiatives, Knowing how to handle a dispute and how to effectively resolve it), Dispute Resolution (Options, Public Struggle, Covert Struggle, Indefinite Postponement, Agreement, "Fair play", compromise, cooperation, capitulation, escape or separation), Prevention (Structures that produce disputes, The meaning and purpose of disputes, Stages and steps of dispute resolution, What does a positive corporate culture mean? Dispute is an incentive for change)

#### Learning outcomes:

To provide the students with knowledge of basic principles of cell microscopic and submicroscopic structure and function.

#### Brief outline of the course:

Lectures:

1.) Cell theory. Cell. 2.) Organization of living systems. 3.) Biological membranes. 4.) Transfer of substances across membranes. 5.) Cell wall of plant cells. 6.) Surface structures of cells. Extracellular matrix. Cell movement. 7.) Intercellular connections. 8.) Cytoskeleton. 9.) Cell nucleus. 10.) Mitochondria and cellular metabolism. 11.) Plastids and vacuoles. 12.) Ribosomes. Endoplasmic reticulum. Golgi apparatus. Lysosomes. 13.) Differentiation, aging and cell death, pathological changes in cells.

Exercises:

1.) Safety at work in a cytomorphological laboratory. Conditions for successful completion of exercises. 2.) Basics of optics. Origin and construction of the image with a magnifying glass and a microscope. 3.) Microscopic technique. 4.) Shape and size of cells. 5.) Principle of fluorescence and confocal microscopy. 6.) Control test. Vacuole. 7.) Cytoplasm movement. 8.) Nucleus and nucleolus. 9.) Cytoplasmic membrane. 10.) Osmotic processes. 11.) Cell inclusions. 12.) Cell walls of plant cells. 13.) Cell counting. Control test.

**Recommended semester/trimester of the course:** 1.

Course level: I.

Prerequisities:

#### **Conditions for course completion:**

Rating

Conditions of continuous control and awarding of assessment:

Active participation in teaching, the student has assignments during the semester - 2 assignments (Electronic subject bulletin board).

During the semester, students take a knowledge test and a final knowledge test.

If the teaching is carried out in a classical way - face-to-face form of teaching. In the case of the distance form of study, emphasis is placed on independent study and written processing of assignments (seminar work as a project for the entire semester, submission of partial outputs by the specified date. Electronic bulletin board). The condition for registering for the exam is to pass the final written test on the basic problems that are connected with the development of philosophical thinking from Thales to Nietzsche.

Conditions for awarding the exam: only after successfully passing the knowledge test - the final test, the student can take the written exam. After its successful implementation, the student will receive credits for the subject.

#### Learning outcomes:

Students will gain an understanding of the fundamental issues in the history of philosophy from Thales to Nietzsche. The discipline presents an overview of more specialized philosophical topics and works that influenced the development of disciplines such as psychology and social work. Students will acquire basic terminology from philosophy by studying source texts of periods of the history of philosophy in relation to the discipline of their field of study. The student acquires the ability for a deeper understanding of historical events, where the emphasis is placed on critical thinking with an emphasis on self-knowledge.

The information is updated annually in the subject's electronic message board in AIS2 or in the MS Teams environment.

#### Brief outline of the course:

Ancient philosophy - origin and development of ancient Greek philosophy • Classical Greek philosophy • Hellenistic philosophy • Medieval philosophy – origin and formation • Renaissance philosophy • Modern philosophy – founders and great systems • Modern empirical-sensualist

philosophy • French Enlightenment philosophy • German classical philosophy • Philosophy 19th century after Hegel

Learning outcomes	

#### Learning outcomes:

Fundamental parameters and relations in ecological science. Abiotic, biotic and anthropogenic factors in air, aquatic and terrestrial/soil environment. Autecology, Demecology and Synecology. Ecosystem and Nature Protection.

#### Brief outline of the course:

Ecological factors and relations in environment (air, water, soil); influence of ecological factors on individuals (morphological adaptations, behavioral reactions); populations and communities; ecosystems (impact assessment); conservation and biodiversity.

1. Basic ecological terms. 2. Characterisation of the basic ecological factors (light, temperature, water). 3. Air environment (composition of atmosphere, physical and chemical factors, air pollutants, organisms and their adaptations in air environment). 4. Aquatic environment (water properties physical and chemical factors, gases in water, water pollutants, eutrophication and saprobity, aquatic organisms). 5. Soil environment (physical and chemical properties, soil profile, humus layer, soil pollutants, soil organisms and their adaptations). 6. Characterization of Populations, structure and ppuatin dynamics. 7.Biocenoses and biotops. 8. Qualitative and quantitative community characteristics. 9. Ecosystems. 10. Biomes and their characteristics, 11. Bidiversity-factors affecting biodiversity, Species-Area relationships. 12. Biodiversity protection.13. Biospheric cycles.

NATM/15	

#### **Course type, scope and the method: Course type:** Lecture / Practice

Recommended course-load (hours):

Per week: 2 / 2 Per study period: 28 / 28

Course method: present

### **Number of ECTS credits:** 5

### **Recommended semester/trimester of the course: 2**.

Course level: I., II.

Prerequisities:

# **Conditions for course completion:**

1. compulsory participation on Anatomy lectures and exercises, max. 3 absences per semester. If the number of absences exceeds three, every other absence results in the loss of one point from the earned points.

2. one written exam (max. 50 points) during semester

3. written exam (test, 50 points max.) during summer exam period. Final grade will be calculated based on the total sum of earned points from written exam (50 points) and test (50 points). Grading scale: A (100-91 points), B (90.5-81), C (80.5-71), D (70.5-61), E (60.5-51), FX (50.5 and less)

### Learning outcomes:

After successful completion of the lectures, student masters the knowledge on anatomy and organization of central and peripheral nervous system. Student understands the particular functions of nervous system in homeostasis, sensory perception, motor functions, as well as in processing of signal at various levels of nervous system. Successful completion of the lectures prepare students for further study of various psychological disciplines.

### Brief outline of the course:

1. introduction to neuroanatomy, basic principles of functional neuroanatomy, classification of the nervous system, dividing of the Nervous System (CNS, PNS, autonomous NS, somatic NS),

- 2. the spinal cord and nervous tracts
- 3. the brainstem: medulla oblongata, pons, mesencephalon
- 4. peripheral nervous system: spinal and cranial nerves
- 5. the cerebellum
- 6. the diencephalon
- 7. the telencephalon, cerebral cortex (paleopallium, archipallium, neopallium) and basal ganglia
- 8. ventricular system of the brain, meninges and blood supply,
- 9. autonomic nervous system: symphatetic and parasymphathetic
- 10. functional systems I: motor systems
- 11. functional systems II: sensory systems, perception
- 12. functional systems III: limbic system, emotions, memory
- 13. functional systems IV: higher cognitive functions, motivation

Prerequisities:

### **Conditions for course completion:**

1. Lectures are optional, but highly recommended due to the presentation of otherwise difficult-toaccess information and its synthesis.

2. In addition to the exam, the student must complete a mandatory 5-hour field trip focusing on the aspects that determine the spread of plants on Earth, solve practical tasks from the topic of the subject and prepare a semester presentation on the given topic, the presentation is defended at a scientific mini-conference.

#### Learning outcomes:

After completing the subject, the student is oriented in various aspects of phytogeographic issues and can apply the acquired knowledge both in basic research within chorology, historical and regional phytogeography, as well as in the evaluation of world biomes. The practical application of the subject is within the study of geographically and climatically conditioned changes in vegetation, in the assessment of the reduction of biodiversity and the extinction of the natural plant communities of the Earth, and the acquired knowledge can be used in work in environmental protection.

#### **Brief outline of the course:**

- 1. History of the subject. Plants and environment. Dynamics of the earth's surface.
- 2. Abiotic and biotic factors of the plant environment.
- 3. Chorology, range, areal disjunctions, relics, endemism, vicarism.
- 4. Elements of flora older and newer approaches.
- 5. Main features of florogenesis. Paleozoic, Mesozoic, Cenozoic.
- 6. Main features of florogenesis. Cenozoic Pleistocene, Holocene.
- 7. Basics of GIS (geographic information systems) and their use in botanical research.
- 8. Postglacial development of vegetation in Slovakia.
- 9. Current changes in terrestrial vegetation and their study, plant invasions.
- 10. Geography of vegetation: from tropical rainforests to tundra I.
- 11. Geography of vegetation: from tropical rainforests to tundra II.
- 12. Geographical origin of cultivated plants.

Seminars and exercises consist of a 5-hour excursion focusing on the connections and conditionality of plant distribution and indoor exercises focusing on an overview of phytogeographical literature, atlases of plant distribution and their importance, types of mapping, types of areas, practical

assessment of floristic elements and types of disjunctions, work with maps of specific taxa throughout Europe. Further: regional phytogeography of the Earth, historical overview of opinions on the phytogeographical (floristic) division of Slovakia. Plant phylogeography. Student presentations of final semester theses (phytogeographical mini-conference).

Or t will be awarded to students who completed the practicals despite the teacher's of the subject takes place orally. Students need to answer to three questions and tes to prepare them. ifications to the conditions for completing the subject due to the COVID19 rious reasons are continuously posted on the subject's electronic board.
Learning outcomes: Getting a basic over	

1. Water in plant life, properties of water, water regime; uptake and transport of water, transpiration.

2. Mineral substances in plants, transport mechanisms of mineral substances, Essential elements and their main functions, useful substances and toxic substances.

3. Photosynthesis: Meaning of photosynthesis, photosynthetic pigments, electron and proton transport, ATP production.

4. Metabolic phase of photosynthesis, CO2 fixation, Calvin cycle, Photorespiration, C4 and CAM plants, ecophysiology of photosynthesis.

5. Mobilization of storage substances, Glycolysis, Pentose cycle, Citrate (Krebs) cycle, Mitochondrial respiration, Biosynthesis and mobilization of lipids

6. Nitrogen and sulfur metabolism: Nitrogen uptake and reduction, assimilation of nitrogen, nitrogenase, assimilation of sulfur

7. Secondary plant metabolism: Isoprenoids, phenolic substances, substances derived from amino acids, stress metabolites

8. Plant growth, cell division, cellulose formation, embryogenesis, meristems, regeneration

9. Photoreceptors: Phytochromes, physiological effects of phytochromes, blue light receptors

10. Plant hormones: Characteristics and method of signaling, auxins, gibberellins, cytokinins, abscisic acid, ethylene, brassinosteroids and other hormones

11. Plant movements, tropisms, circadian rhythms

12. Flowering control: Internal and external regulation of flowering, floral meristem and control of flower development.

13. Physiology of stress: Abiotic stress, biotic stress, response of plants to stress.

-	es: ents will gain basic knowledge about the origins, foundations, and applications of gy as a new and dynamically developing field of psychology. They will become

Positive Psychology as a new and dynamically developing field of psychology. They will become familiar with research in this area and various perspectives on personal well-being, happiness, and life meaning. They will acquire an overview of the main theoretical approaches in Positive Psychology and their application in the context of individuals and society, with an emphasis on their use in educational settings.

Skills: Students will develop the ability to independently and critically address current topics in Positive Psychology, such as positive emotions, interpersonal relationships, hope, optimism, gratitude, and wisdom. They will learn to apply Positive Psychology principles in designing programs aimed at promoting personal well-being and developing positive traits, which can be utilized in working with children and youth in school environments.

Competencies: After completing the course, students will be able to effectively apply the principles of Positive Psychology in educational contexts, such as fostering positive interpersonal relationships and developing optimism and gratitude in students. They will be prepared to

participate in the creation and implementation of programs focused on personal development and mental well-being, contributing to the creation of a positive and supportive school environment.

# Brief outline of the course:

- 1. Different perspectives on well-being nad happiness in psychology
- 2. Main theoretical approaches to positive psychology
- 3. Positive emotions and positivity
- 4. Meaningfulness
- 5. Positive interpersonal relations
- 6. Post-traumatic growth
- 7. Hope and optimism
- 8. Gratitude
- 9. Spirituality as a personality dimension
- 10. Wisdom
- 11. Positive institutions
- 12. New themes and topics in PP

**Conditions for course completion:** 

Obtaining the required number of credits in the prescribed composition by the study plan.

#### Learning outcomes:

Verification of acquired competencies of the student in accordance with the profile of the graduate.

### **Brief outline of the course:**

Psychology of cognition, emotions and motivation, personalitiesThemical areas for the state exam in Psychology MOS psychologyPsychological aspects of human cognition. History of cognitive psychology. General characteristics of human cognition, models of cognition. Perception. Sensory and perceptual processes. Basic issues of receiving information, organization of the perceptual field and object recognition. Theories and models of these processes. Attention. Basic functions and properties of attention. Theories of selection and division of attention. Memory and learning. Types of memory. Forgetting. Conditioning and other forms of learning. New memory approaches. Imagination. Basic characteristics of imagination and imagination. Theory of imagination. Types of ideas. Thinking. Basic thought operations. Concepts. Thinking, language and speech. Judgment. Decision making and problem solving. Theories and models of decision making. Creativity Intelligence. Definitions. History of IQ detection. Approaches and theories. Psychology of emotions. Definition of basic terms: emotion, emotion, emotional behavior, emotional states, emotional episodes, moods. Emotional situations. Functions of emotions. Emotion regulation and emotional intelligence. Coping and emotions. Traditional and contemporary approaches to the study of emotions: Philosophical, historical, biological, neurophysiological and psychological approach to the study of emotions. Evolutionary psychological and psychophysiological theory of emotions. Cognitive approaches to explaining emotions. Voice communication of emotions and facial expressions. Functional approach to emotions. Intrapersonal, social and developmental function of emotions. Classification of emotions. Characteristics and research findings related to basic emotions: Joy and happiness. Love and affection. Hate and anger. Fear and sadness. Resistance, disgust and anger. Emotions associated with JA. The concept of motivation, motive. Categorization of motifs. Primary and secondary motives. Performance motives. Social motives. Approaches to the study of motivation. Classical approaches and theories: Theory of instincts and instincts. Basic homeostatic models. Humanistic theories of motivation. Performance motivation theory, attribution motivation theory and cognitive approaches to motivation. Selected current approaches to the study

of motivation. Theories based on expectations, current interests, reasons for involvement. Theories integrating expectation and value. Theories of motivation and choice. Focus on psychodynamic forces, general tendencies of the representatives of this group of Personality Psychology. Evaluation of the Classical Psychoanalysis by Sigmund Freud. Psychoanalytic Tradition and Ego-Psychology. Evaluation of current Psychoanalytic Theory. Permanent personality traits according to the Analytical Psychology of C. G. Jung. Evaluation of Jungian Theory in Personality Psychology. Main characteristics of A. Adler's Individual Psychology. The focus of research and evaluation of Individual Psychology by A. Adler. Interpersonal dynamics and its evaluation in Personality Psychology. Focus on the surviving person and evaluation of the personality theory of the representatives of the Humanistic and Holistic approach. Existential psychology of personality and Phenomenological approach to personality. Personality structure according to K. Lewin and a critique of Lewin's theory.G. Kelly's theory of personal constructs and critique of Kelly's theory. Emphasis on lasting characteristics; evaluation of the contribution of theorists of Personality Psychology: H. Murray and G. Allport. Evaluation of W. H. Sheldon's contribution in Personality Psychology. Evaluation of the theory of R. Cattell and H. J. Eysenck in Personality Psychology. Structural models of personality traits. Three-factor personality models and Big five. Evaluation of the Theory of Social Learning in the Context of Contemporary Personality Psychology.

# Course type, scope and the method:

**Course type:** Lecture / Practice

**Recommended course-load (hours): Per week:** 2 / 2 **Per study period:** 28 / 28

Course method: present

### **Number of ECTS credits:** 6

Recommended semester/trimester of the course: 1.

Course level: I.

Prerequisities:

# **Conditions for course completion:**

Interim evaluation of 40%

1. 2x credit tests (after part about emotions and after part about motivations, 2 x 15b, max 30b, min 15b).

2. activity in seminars (max 10b, min 5b).

Min. the number of points obtained per semester required for admission to the examination is 21p. 60% final evaluation - written exam (in the exam period), max. 60b, min. 31b.

A final evaluation is a sum of assessment during semester and exam. The information will be yearly specified on the electronic noticeboard (aj black board môže byť) of the course in AiS2, aleternatively in LMS UPJŠ or MS Teams environment.

### Learning outcomes:

The aim of the subject is to give students a systematic explanation of the basics of psychological knowledge about emotions and motivation with an emphasis on the interpretation of the latest research findings.

Knowledges: Upon successful completion of the course, students are well versed in the basic concepts / terminology of the course.

Skills: Students can identify the basic characteristics of different approaches to emotions and motivation and are able to distinguish between them. Based on the acquired knowledge, they are able to understand them and perceive individual approaches in the context of the genesis of their empirical research.

Competences: Through exercises, students deepen their knowledge in the subject matter and train their skills to use the acquired knowledge in a relevant way, to think about it independently and critically, and to apply it adequately to practical / model cases.

The information will be yearly specified on the electronic noticeboard (even a black board can be) of the course in AiS2, alternatively in LMS UPJŠ or MS Teams environment.

### Brief outline of the course:

1 Psychology of emotion and motivation - definition of basic concepts. The relationship of emotion and motivation. 2 Traditional approaches to the study of emotions - historical, philosophical, biological, social and psychological approaches. 3 Evolutionary psychological and psychophysiological theory of emotions. 4 Vocal communication of emotions and facial expressions. 5 Regulation of emotions. 6 Function, development and education of emotions. 7 Basic concepts of psychology of motivation. 8 Classical approaches to the study of motivation. Homeostatic theories of motivation. 9 Humanistic theory of motivation. 10 Achievement motivation. 11 Attribution theory and cognitive approaches. 12 Current theories of motivation.

es.

The information will be yearly specified on the electronic noticeboard (even a black board can be) of the course in AiS2, alternatively in LMS UPJŠ or MS Teams environment.

#### **Conditions for course completion:**

The evaluation of the course and its subsequent completion will be based on clearly and objectively set requirements, which will be set in advance and will not change. The aim of the assessment is to ensure an objective and fair mapping of the student's knowledge while adhering to all ethical and moral standards. There is no tolerance for students' fraudulent behavior, either in the teaching process or in the assessment process.

Continuous assessment: credit test (min. Number of 11 points) + individual work - power point presentation (min. Number of points 11). Total max. 40 b. - min. 22 b.

Final evaluation (exam, final thesis ...): exam max. 60 points, min. 30 points.

At least 90 points are required to obtain an "A" rating, 80-89 points to obtain an "B" rating, 70-79 points to obtain an "C" rating, 60-69 points to obtain an "D" rating and 51 to obtain an "E" rating 51 -59 points. The final evaluation is calculated as the sum of the points obtained

#### Learning outcomes:

Analysis of the social and socio-psychological context of human existence, with emphasis on the relationship to oneself, the relationship to others and the relationship to the social environment. The objectives of the study of the subject social psychology can be divided into three basic areas: a / to approach the subject, key areas of building the knowledge system and methods of this psychological discipline; b / specify the place of social psychology in the structure of psychological sciences and its relations to social and behavioral sciences; c / to provide information on the main directions of application of socio-psychological knowledge in research, expertise and routine work.

The basic thematic areas of the course will be the content of lectures. The purpose of the seminars will be to expand the subject matter in the form of presentations by students on the topic (papers) and to illustrate approaches to knowledge of the field (methodologies, research, model situations, socio-psychological influenza procedures).

The student is able to demonstrate an understanding of an individual's behavior in sociopsychological contexts (eg social cognition, social communication, affiliation, aggression, social conflicts, etc.).

The student is able to describe, explain and evaluate basic socio-psychological theoretical concepts and be able to illustrate them with examples.

The student is able to apply the learned knowledge - will be able to predict some forms of human behavior in socio-psychological contexts.

The method of teaching the subject will be oriented to the student. Lecturers will be interested in the needs, expectations and opinions of students so as to encourage them to think critically by expressing respect and feedback on their opinions and needs.

The content of the curriculum will be based on primary and high-quality sources that will reflect the topicality of the topics so as to ensure the connection of the curriculum with other subjects and also the connection of the curriculum with practice. Students will be expected to take an active approach in lectures and seminars with an emphasis on their independence and responsibility.

#### **Brief outline of the course:**

Background, subject and history of social psychology. Social cognition. Social communication. Social psychology of personality. Self-image and identity. Coping. Social impact, conformity. Aggression and aggression.

Learning outcomes	

The aim and purpose of teaching the subject is to impart knowledge and promote reflection on the issues of education and training in the context of social and political change.

Development of knowledge: the student will be able to know the current theoretical background related to the process of education and training in a modern democratic society.

The student will be able to navigate the social and political space - politically, legally, socially and culturally. He/she will be able to look for alternatives and solutions to dysfunctions, while at the same time exploiting opportunities and ways to implement them.

#### Brief outline of the course:

The status, role and functions of education in human life and society. The political, social and economic objectives of education. Education, learning and social change in the context of globalisation. Macrosocial determinants of education. Current roles of education and training in modern performance and democratic society.

disorder, and disad	course will offer the major theories explaining the nature of health, illness, aptation. The graduate will acquire the basic knowledge needed in clinical working with patients.

Skills: The student will acquire the practical skills necessary to work as a clinical psychologist, especially in the area of basic psychodiagnostics and clinical-psychological interviewing. The student will be able to distinguish basic taxative units of categories of psychological disorders, he/ she will be able to solve ethical dilemmas in clinical psychology, he/she will be able to conduct a clinical-psychological interview, he/she will be able to collect anamnestic data from a patient. Competencies:

(a) Demonstrate the following knowledge:

- Characteristics and scope of clinical psychology,

- (a) the conditions of undergraduate and postgraduate education in clinical psychology,

- the specific features of clinical research

- biopsychosocial approach to the treatment of psychological disorders,

- basic classification systems and diagnostic criteria of psychological disorders,

(b) apply their knowledge to

- administer basic psychodiagnostic tests in clinical psychology,

- specification of psychodiagnostics in clinical psychology,

- decision making in psychological intervention of psychological disorders,

- making ethical decisions in clinical psychology

The information is updated annually on the electronic course bulletin board in AiS2, alternatively in the UPJŠ LMS or the MS Teams environment.

## Brief outline of the course:

1. The subject of clinical psychology, its position in the system of psychological sciences

2. History of the development of clinical psychology, history of clinical psychology in our country, important personalities in contemporary clinical psychology

3. Practical issues of the work of a clinical psychologist: prevention, crisis intervention, clinicalpsychological interview, ethics in clinical psychology

4. Psychopharmacotherapy - overview, effect

- 5. The methodology of research and individual approach in clinical psychology
- 6. Systems of classification in psychiatry (ICD-10,DSM-V).

7. Clinical psychological methods in a/ anxiety disorders, b/affective disorders, c/ psychotic disorders, d/ addictions, e/ eating disorders, f/ organic mental disorders, g/ personality disorders. Basic psychotherapeutic strategies – review. Crisis interventions, suicidology.

8. Psychology of the sonmatic disease - change of needs, psychological correlates of pain, communication with the patient

9. Psychodiagnostics in clinical psychology - clinical and test methods

10. Personal history and its place in clinical psychology - specifics for adult and pediatric patients The students will get theoretical background, examples and tips from practice, experience for yourself.

The information will be yearly specified on the electronic noticeboard of the course in AiS2, aleternatively in LMS UPJŠ or MS Teams environment.

ZPOP/21	

# Course type, scope and the method:

**Course type:** Lecture / Practice

Recommended course-load (hours):

Per week: 2 / 2 Per study period: 28 / 28

Course method: present

Number of ECTS credits: 6

### **Recommended semester/trimester of the course:** 3., 5.

Course level: I.

Prerequisities: KPS/VP2/06 or KPS/VP2/25 or KPPaPZ/VPMOS/16

### **Conditions for course completion:**

1. Active approach at classes (12 points)

- 2. Written assignments (12 points)
- 3. Written tests (36 points)

3. Final exam (40 points). Components: a) Final test in the form of written test.

Prerequisites and co-requisites: Continuous assessment 60%, at least 36 points; final evaluation 40%, min. 24 points.

The information will be yearly specified on the electronic noticeboard (even a black board can be) of the course in AiS2, alternatively in LMS UPJŠ or MS Teams environment.

### Learning outcomes:

1. Knowledge of counselling psychology about the main approaches of counselling, models of counselling, the process of counselling, the counselling relationship, the main application areas of counselling.

2. Skills like the ability to establish a counselling relationship, to acquire the basic competencies of conducting a counselling interview with a client.

3. Ability to critically evaluate different counselling approaches, ability to choose an appropriate counselling approach to the client and ethical attitude to the application of knowledge and work with the client.

The information will be yearly specified on the electronic noticeboard (even a black board can be) of the course in AiS2, alternatively in LMS UPJŠ or MS Teams environment.

### Brief outline of the course:

Practice of each part of counselling process: Helping as a road. Counselling relationship. Cultural background and counselling relationship. Skills for creating the contact/relationship. The ability to reflect: paraphrasing. Reflection: emotions, feelings. Advanced reflection: reflection of the meaning, summarizing. Confrontation. Evaluation and setting the goals. Techniques supporting the change II: Interventions and actions. Final evaluation and closing the counselling relationship.

principles of measu theories. They will le assessment, as well a psychodiagnostic too	ts will acquire basic knowledge of psychological measurement, including the trement and scaling, characteristics of psychodiagnostic methods, and test earn the fundamentals of test construction, item analysis, reliability and validity as normalization and norm creation. These insights will enable them to apply ols in practice, not only in clinical settings but also in educational environments, and supporting student development.

Skills: Students will learn to critically evaluate and interpret data obtained through psychological and psychodiagnostic tools. They will master basic procedures for test construction and item analysis, with the ability to apply these skills in school settings, for example, in creating tools for student assessment or supporting their individual development.

Competencies: Graduates will be able to effectively apply psychological knowledge and diagnostic tools in various areas of practice, including educational settings. They will be prepared to responsibly and ethically use psychodiagnostic methods, contributing to individual development and improving the quality of the educational process.

## Brief outline of the course:

Psychometrics and Definition of Basic Terms:

Introduction to measurement and scaling in psychology.

Topics Covered:

Types of tests and their characteristics.

Types of variables in psychometrics.

Characteristics of psychodiagnostic methods.

Psychological test theories: classical test theory and contemporary models.

Introduction to test construction and item analysis.

Reliability and methods of its assessment.

Validity and sources of evidence for validity.

Normalization and norms.

Responsible research practices and issues in measurement.

Ethics in psychodiagnostics.

#### Learning outcomes:

The main goal of the subject is to get knowledge on the basic reasons of recent distribution of the animals on the Earth, zoogeographic regionalization of the Earth's surface and human influence on the faunal distribution in the history.

### Brief outline of the course:

This course will review our current understanding of the patterns of animal distribution and the processes that influence distributions of species and their attributes. Zoogeography will integrate information on the historical and current ecology, genetics, and physiology of animals and their interaction with environmental processes (continental drift, climate) in regulating geographic distributions. The course will emphasize descriptive and analytical approaches useful in hypothesis testing in zoogeography and will illustrate applied aspects of zoogeography (e.g. refuge design in conservation).

Impleting the exercises, students proceed to the final exam, bringing with them the exercises that make up 40% of the final grade. Students receive 60% of the final oral exam. Ins during the exercises are: a test on zoological terms (knowing how to define the spublished at the beginning of the semester), recognizing animals according the Slovak and scientific genus and species name to the depicted animal and so or series; the list of animals is published at the beginning of the semester, the correct animal pictures for the names and learn to name the animal ure). Students have one correction period for the paper and animal knowledge. In the active to pass the exercises. The maximum number of points from the exercises is 40, while in at least 28 points to pass the exercises. The number of points from the exercises, they have not are and must enroll in the subject again in the next academic year. If the students they have successfully completed the exercises and can register for the final them the points from the exercises, which make up 40% of the final grade. oral. Specific exam dates will be posted in AIS2 at the end of the semester. ation on the types of questions on the exam is published in the Moodle course ints get 60% of the final grade from the exam. idual grades:

Students will gain knowledge of the systematic classification and phylogenetic relationships of the higher groups of non-chordates, knowledge of their morphology, anatomy, mode of reproduction, biology and geographic distribution.

## Brief outline of the course:

1. Fundamentals of the history of zoology.

System, anatomy, morphology, development, phylogenetic relationships and exemplary species of selected groups of invertebrates:

- 2. Porifera, Cnidaria, Ctenophora
- 3. Platyhelminthes, Rotifera, Acantocephala
- 4. Entoprocta, Ectoprocta, Cycliophora
- 5. Mollusca, Annelida
- 6. Nematode, Onychophora, Tardigrad
- 7. Arthropoda Chelicerata
- 8. Arthropoda Myriapoda
- 9. Arthropoda Crustacea (Branchiata)
- 10. Arthropoda Hexapoda / Entogantha
- 11. Arthropoda Hexapoda / Insecta Heterometabola
- 12.Arthropoda Hexapoda / Insecta Holometabola
- 13. Deusterostomia Echinodermata
