COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚBEV/ EFZ1/03	Course name: Animal and Human Ecophysiology
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present	
Number of ECTS credits: 6	
Recommended semester/trimester of the course: 1.	
Course level: II.	
Prerequisites:	
Conditions for course completion: Elaboration of semestral thesis.	
Learning outcomes: To understand the basic mechanisms of adaptations to environmental factors in animals and humans.	
Brief outline of the course: 1. Definition of the subject. External environment characteristics. Environmental factors, classification, time factor. Reaction, adaptation, deformation. Classification of adaptations. Stress reaction, general adaptation syndrome. 2. Pathological reaction, pathological state, disease. General characteristics of disease – pain, fever, inflammation. 3. Ageing, theories, physiological changes in ageing. Death of organism. Adaptations to food intake changes and food composition. Food intake regulation. 4. Caloric restriction, starving, increased caloric intake, obesity. Time factor in food intake. 5. Thermoregulation, heat and cold adaptations. Hibernation, diapause. 6. Altitude and hyperbaric adaptations. Osmoregulation. 7. The effects of hypergravity and microgravity, physiological changes during space flight. Sound, ultrasound, infrasound effects. 8. Electromagnetic fields. Effects of electric current. Infrared, visible, ultraviolet radiation and their significance for organisms. Microwaves. Laser. 9. Ionising radiation, classification, sources. The effects of ionising radiation. 10. Xenobiotics, biotransformation. Air, water, and soil pollutants. 11. Drug abuse, mechanism of drug action. The effects of opioids and CNS depressants – sedatives, hypnotics, and alcohol. 12. The effects of CNS stimulants – amphetamines, cocaine, methylxanthines, nicotine. The effects of hallucinogens and solvents. 13. Carcinogenesis, chemical, physical, and biological carcinogens. Oncogenes, tumour suppressor genes. Prevention of carcinogenesis. Prions.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice							
Faculty: Faculty of Science							
Course ID: ÚBEV/ AMK/15		Course name: Applied Microbiology					
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present							
Number of ECTS credits: 5							
Recommended semester/trimester of the course:							
Course level: II., III.							
Prerequisites:							
Conditions for course completion: Attendance of practicals (at least 90%), final examination							
Learning outcomes: The students will acquire in-depth knowledge on the important role of microorganisms in different fields like food (production of beer, wine, milk products, probiotics), chemical and pharmaceutical industry (production of vitamins, hormones, amino acids, enzymes, commodity chemicals), vaccines and their production, wastewater treatment, as well as microbial bioremediation, biofuels and biomining.							
Brief outline of the course: Application of bacteria in industrial processes, biochemicals production. Application of recombinant DNA techniques in industry. Lactic acid bacteria and its application in food industry. Microbiology in food quality control. Application of microorganisms in environment protection – wastewater treatment, bioremediation, biofuels, microbiology of biogas plants.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚBEV/ MMZ/20	Course name: Basic molecular methods in Zoology and Animal Physiology
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 2 Per study period: 14 / 28 Course method: present	
Number of ECTS credits: 3	
Recommended semester/trimester of the course: 1., 3.	
Course level: II.	
Prerequisites:	
Conditions for course completion: Ongoing evaluation: active participation on practical exercises Final evaluation: fulfilling the practical task	
Learning outcomes: Practical skills in the following techniques: <ul style="list-style-type: none"> - Pipetting methods, - DNA/RNA extraction, - PCR methods (PCR, RT-PCR, qRT-PCR) + electrophoretic visualization - database NCBI (GenBank, BOLD) - basic instructions in using of phylogenetic program Mega: sequences trimming, construction of phylogenetic trees 	
Brief outline of the course: The aim of the subject is to introduce the methods of molecular biology as the tools used to solve problems of zoological, ecological and physiological studies, in both theoretical but first of all in practical form. The course focuses on basic molecular methods used in studies of taxonomy, ecology and physiology of animals (invertebrates and vertebrates). The main task is to provide not only theoretical knowledge, but in the form of practical exercises, mainly skills usable in practice (especially in the solution of future bachelor and master theses).

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚBEV/ ZNFYZ/15	Course name: Basics of Neurophysiology
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 1 Per study period: 28 / 14 Course method: present	
Number of ECTS credits: 4	
Recommended semester/trimester of the course:	
Course level: II.	
Prerequisites:	
Conditions for course completion: Regular attendance at classes. Active participation in practices. Elaboration of assigned tasks. Successful completion of the oral exam.	
Learning outcomes: Students will learn the principles of nervous system functioning from the level of individual neurons (membrane potential, action potential, synaptic transmission), through simple neural circuits (reflexes, ...) to the description of complex functional parts of the nervous system (brain, spinal cord, peripheral nervous system) .	
Brief outline of the course: 1. Neurophysiology as a part of neurosciences 2. Nervous system - basic structures and functions (CNS, PNS). 3. Neuron as a basic functional unit of the nervous system - structure, function, structural and functional classification 4. Glial cells - role and functional classification 5. Electrochemical basis of membrane potential; ion channels, ion currents 6. Origin and propagation of action potential, phases, parameters and types of action potential. Nerve fibers, myelin, rate of propagation of arousal, etc.... 7. Principle of synapse, chemical and electrical synapse, synaptic excitation and inhibition. Synaptic potentials, temporal and spatial summation, excitation threshold. 8. Neurotransmitters and receptors. Receptor classification, mechanism of action. 9. Spinal cord - basic structures and functions. Spinal reflexes. Basic sensory and motor pathways in the spinal cord. 10. Brain - basic parts, their origin and function. 11. Neurophysiology of the senses - sight, hearing, smell, taste and touch. 12. Peripheral nervous system. Autonomic nervous system - sympathetic and parasympathetic. 13. Bioelectrical manifestations of the nervous system. Clinical and experimental research methods.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚBEV/ BSTII/25	Course name: Bioštatistika II
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 2 Per study period: 14 / 28 Course method: present	
Number of ECTS credits: 4	
Recommended semester/trimester of the course: 2., 4.	
Course level: II.	
Prerequisites:	
Conditions for course completion: Oral exam, completion of exercises, elaboration of a semester assignment	
Learning outcomes: The course is focused on practical processing of biometric data. It should provide students with knowledge of basic tools for processing their own measurements in the processing of final theses.	
Brief outline of the course: Lectures: 1. Biometric data and their graphical presentation, univariate statistics data 2. Normalization and standardization of data 3. Exploratory data analysis 4. Basics of Univariate Statistics, Part 1 5. Basics of Univariate Statistics, 2nd time 6. Biometric data and graphical presentation, data of multivariate statistics 7. Binary, quantitative and semi-quantitative data in biometrics 8. Multivariate clustering analyses 9. Ordinal analyses of multivariate data, methods of hypothesis formation 10. Ordinal analyses of multivariate data, methods testing hypotheses 11. Introduction to biometric data processing in the context of spatial diversity 12. Selected topics of biometric processing of digital image data 13. Introduction to Chemometric Data Processing 14. Biometrics and biodiversity Exercises: Implementation of the lectured topics on sample datasets. Past, R environment. Data Normalization and Standardization, Logarithmic and Box-Cox Transform, Histogram, Biplot, 3D Plot, Radar Fence, Bar-Box-Pie-Jitter-Violin Graph, Summary Statistics, Normality and Homoscedasticity Tests, t Test, F Test, Mann-Whitney Test, Kolmogorov-Smirnov Test, One-Factor and Two-Factor ANOVA, Correlation Table, Heatmap, ANCOVA, pivot table, clustering analyses, K-means clustering, principal component analysis, canonical correspondence analysis, non-metric multidimensional scaling, linear discriminant analysis, redundancy analysis, MANOVA, one-factor	

and two-factor PERMANOVA, linear regression, Mantel's test, autocorrelation analysis, Thin-plate splines, elliptic fourier analysis, allometric analysis, alpha and beta diversity indicators

Recommended semester/trimester of the course: 1.					
Course level: II.					
Prerequisites:					
Conditions for course completion: Oral examination.					
Learning outcomes: To provide the students with knowledge about the principal metabolic processes in living cells.					
Brief outline of the course: Carbohydrates – significance and role in animal organisms. Inborn errors of carbohydrate and lipid metabolism in humans. Lipid metabolism. Role of the liver and adipose tissue in lipid metabolism. Plasma lipoproteins – metabolism and disorders. Cholesterol and atherosclerosis. Protein metabolism and its inborn errors. Water and solute metabolism. Physiology and regulatory mechanisms of water-base balance in animal organisms. Metabolic regulation. Topochemistry of metabolic processes

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚBEV/ CRO1/03	Course name: Chronophysiology
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 1 Per study period: 28 / 14 Course method: distance, present	
Number of ECTS credits: 5	
Recommended semester/trimester of the course: 1.	
Course level: II., III.	
Prerequisites:	
Conditions for course completion: Active participation on practicals. Passing of the final oral examination.	
Learning outcomes: To outline the problematics of the time organization of biological processes and their significance in evolution of living organisms. To understand the mechanisms, ensuring the adaptation to regular changes in their environment with various periodicity, as well as of the common action of external and internal factors in control of the biological rhythms..	
Brief outline of the course: 1. Time structure of the physiological variables in animals. 2. Overview of the history of chronobiology. 3. Basic notions and division of biological rhythms. 4. Genetic basis and molecular mechanisms of the biological rhythms in animals. 5. Endogenous character of the biological rhythms. Localization of the biological clock. 6. Synchronisation of rhythms. Multioscillatory system of the body. 7. Model animals in study of biological rhythms. 8. Ultradian rhythms. 9. Circaannual (seasonal) rhythms. 10. Application of chronobiological principles in medicine. 11. Disturbations of the biological rhythms. The jet-lag syndrome. 12. Biological rhythms in shift-work. 13. The significance of biological rhythms in the evolution of living organisms.

Course ID: ÚBEV/ DPO/22		Course name: Diploma Thesis and its Defence			
Course type, scope and the method: Course type: Recommended course-load (hours): Per week: Per study period: Course method: present					
Number of ECTS credits: 16					
Recommended semester/trimester of the course:					
Course level: II.					
Prerequisites:					
Conditions for course completion: The diploma thesis is the result of the student's own creative work. It must not show elements of academic fraud and have to meet the criteria of proper research practice defined in Rector's Decision no. 21/2021, which establishes the rules for assessing plagiarism at the Pavol Jozef Šafárik University in Košice and its components. The fulfillment of the criteria is verified mainly in the training process and in the process of defending the thesis. Failure to comply with them is grounds for initiation of disciplinary proceedings.					
Learning outcomes: With the diploma thesis, the student demonstrates mastery of the extended theory and professional terminology of the field of study, the acquisition of knowledge, skills and competences in accordance with the declared profile of the graduate of the study program, as well as the ability to apply them in an original way when solving the selected problem of the field of study. The student will demonstrate the ability of independent professional work from a content, formal and ethical point of view. Further details of the diploma thesis are determined by Directive no. 1 /2011 on the basic requirements of the final theses and the Study Regulations of the UPJŠ in Košice for 1st, 2nd and combined 1st and 2nd degrees.					
Brief outline of the course: The student carries out his activities under the guidance of the supervisor. The result of the student's work should be the fulfillment of the objectives stated in the approved thesis assignment.					
Recommended literature: Mentioned in the approved thesis assignment.

Course level: II.					
Prerequisites:					
Conditions for course completion: Ongoing evaluation: active participation on practical exercises. Final evaluation: fulfilling the practical task.					
Learning outcomes:					
Brief outline of the course: Presenting the basic knowledge of the most threatened class of vertebrates - amphibians, and various methods used in their research. This subject will contain theoretical and practical part, which will take place directly in the field with the main aim to show students how to observe and catch amphibians, handling, obtaining of biological material and its storage. In addition, students will be involved in activities related to the protection of amphibians in selected locations in eastern Slovakia (building of protection barriers, transferring of amphibians during their spring migration).

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚBEV/ EPZ1/03	Course name: Ecology of Soil Animals
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present	
Number of ECTS credits: 6	
Recommended semester/trimester of the course: 2.	
Course level: II.	
Prerequisites:	
Conditions for course completion: active (100%) participation in seminars and lectures preparation of the presentation to the given topic preparation of calculation protocol practical and oral examination	
Learning outcomes: The main goal of the subject is to gain basic knowledge on the functioning of the soil system with the special reference to dominant systematic groups of the soil fauna, their ecology and taxonomic identification.	
Brief outline of the course: The subject deals with the soil as an ecological system and type of environment. It is concentrated to the ecological factors ruling the life in soil, soil-dwelling animals and their adaptations to this specific habitat. Functioning of the soil system and understanding of the principal interactions of soil fauna with plant rhizosphere and soil microflora are among the main goals of the discipline. <ol style="list-style-type: none"> 1. Soil physical and soil-chemical characteristics. 2. Ecological characteristics of dominant groups of soil fauna - Protozoa, Nematoda. 3. Ecological characteristics of dominant groups of soil fauna - Annelida, Tardigrada 4. Ecological characteristics of dominant groups of soil fauna - Aranea, Pseudoscorpiones, Opiliones 5. Ecological characteristics of dominant groups of soil fauna - Acari, Isopoda 6. Ecological characteristics of dominant groups of soil fauna - Myriapoda - Pauropoda, Symphyla, Diplopoda, Chilopoda 7. Ecological characteristics of dominant groups of soil fauna - Apterygota - Diplura, Protura, Collembola, Thysanura 8. Ecological characteristics of dominant groups of soil fauna - Coleoptera - Carabidae, Staphylinidae, Elateridae, Diptera 9. Ecological characteristics of dominant groups of soil fauna - Vertebrata-Insektivora 10. Methodological approaches, soil sampling. 11. Identification of soil fauna-keys as taxonomic tool. 12. Identification of soil fauna - morphological differences in males, females, adults, juveniles. 	

13. Open, forest ecosystems and agricultural soils and their fauna.

Number of ECTS credits: 6					
Recommended semester/trimester of the course: 2.					
Course level: I., II.					
Prerequisites:					
Conditions for course completion:					
Learning outcomes: Ecological characteristic of freshwater groups and prevalent species (invertebrates, vertebrates), characteristic for habitat type and water condition (bioindication).					
Brief outline of the course: The course is dedicated to freshwater ecosystems of the temperate zone, with an emphasis on representative members of invertebrates and primary aquatic vertebrates, their biology, ecology, and distribution. In addition to theoretical preparation, the course focuses on demonstrating field research on individual groups, examples of sampling methods, and the approaches and significance of hydrobiological monitoring of waters and wetlands. Water is an ongoing priority topic for society. Less attention is paid to wetlands and water biodiversity in our country, although it is precisely here that the key to understanding a functioning landscape lies.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚBEV/ EB1/99	Course name: Evolutionary Biology
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 3	
Recommended semester/trimester of the course: 3.	
Course level: II.	
Prerequisites:	
Conditions for course completion: In the written exam, the student must demonstrate, in addition to knowledge in the field of evolutionary biology, knowledge of analytical and synthetic thinking when solving the answers to problem-formulated questions, while using knowledge from the entire bachelor's and master's studies of his field.	
Learning outcomes: Graduates of the course will gain an overview of evolutionary theories in the past and today, and based on the most modern scientific knowledge about macro- and microevolutionary processes in living nature at various levels of investigation and knowledge, they should be able to analytically solve scientific, but also philosophical questions in the field of evolutionary theory. He is able to argue and critically evaluate different views on evolution and apply his knowledge in different types of work tasks not only in an academic environment, but also in practice, e.g. in agriculture, ecology, environmental protection and the like.	
Brief outline of the course: 1. Introduction to evolutionary biology. Historical development of ideas about the evolution of life. Evidence of the theory of evolution. 2. The origin and evolution of the first forms of life on Earth. 3. Theory of natural selection. 4. Molecular evolution I: Evolutionary processes at the gene level. Molecular evolution. 5. Molecular evolution II: Evolutionary processes at the level of species and populations. 6. Molecular evolution III: Evolution of genetic systems. 7. Reproductive strategies of plants, sexuality, asexuality and evolution. 8. Macroevolution and microevolution. Types of speciation. Evolutionary trends of green plants. 9. Extinction - a sad but natural part of evolution. 10. Overview of animal evolution. 11. Origin and development of man I. 12. Origin and development of man II.

Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: distance, present	
Number of ECTS credits: 5	
Recommended semester/trimester of the course: 2., 4.	
Course level: II., III.	
Prerequisites:	
Conditions for course completion: active participation in practical exercises, presentation of seminar work, continuous written examinations, oral examination	
Learning outcomes: After completing the course Fish parasites students will demonstrate: <ul style="list-style-type: none"> - knowledge of diagnostic methods commonly used in fish parasitology - practical use of methods commonly used in fish parasitology - evaluate the method of detection and identification on the basis of knowledge of fish parasite life cycles 	
Brief outline of the course: The course focuses on the taxonomy, morphology, physiology, and behavioral manifestations, life cycles, and ecological requirements of selected groups of parasitic organisms of freshwater fish. It explores adaptations to a parasitic lifestyle in both unicellular and multicellular parasites, parasite-host interactions, and the mutual influence on the population dynamics of both parasites and hosts, host specificity, co-evolution with the host, the socio-economic impact of parasitic diseases, and the influence of humans and aquaculture.

Course ID: ÚBEV/ HDR1/99		Course name: Hydrobiology			
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present					
Number of ECTS credits: 3					
Recommended semester/trimester of the course: 1.					
Course level: I., II.					
Prerequisites:					
Conditions for course completion:					
Learning outcomes:					
Brief outline of the course: The transfer of knowledge of hydrobiology takes place in the form of lectures, seminars, field trips and independent work of students in the field according to the instructions of the teacher. Teaching is focused on understanding the basic dynamics of abiotic and biotic relationships, conditions and interactions in different types of freshwater environments. It notes current issues such as biodiversity loss, degradation of aquatic habitats and drinking water sources, water loss in the country of pollution, historical degradation of watercourses by regulations, migration barriers and pollution, wetland extinction, acquaints students with the starting points of renaturalization and ecosystem revitalization. Water is the key to understanding the functioning of the landscape, living organisms are an indispensable part of the self-cleaning, productive and other properties of water, on which life depends on our planet. The climate crisis is opening up these problems with new urgency.

Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 2 Per study period: 14 / 28 Course method: present							
Number of ECTS credits: 4							
Recommended semester/trimester of the course: 1.							
Course level: II., III.							
Prerequisites:							
Conditions for course completion:							
Learning outcomes: The goal is to teach the students on II. stage some theoretical and practical aspects of flow cytometry. The course will cover theoretical bases of fluorescence, its detection, multiparametric analyses and practical applications in clinical diagnosis and scientific research.							
Brief outline of the course: 1.) Conditions for completing the course, completing training in health and safety regulations. 2.) Fluorescence, types of fluorescent devices, flow cytometer. 3.) Principle of flow cytometry, data presentation, gating strategy. 4.) Particles size in flow cytometry, flow cytometry in cell biology, zoology and microbiology. 5.) Cell sorting. 6.) Cell cycle analysis. 7.) Detection of phosphatidylserine translocation and viability. 8.) Compensation, spectraviewer. 9.) Analysis of mitochondrial membrane potential and activation of caspases. 10.) Detection of stem cells. 11.) Immunophenotyping. 12.) Flow cytometry in botany. 13.) DNA content and genome size. Data evaluation strategies, FlowJo software.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: KF/ FMPV/22	Course name: Methodology of Science 1
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course:	
Course level: II.	
Prerequisites:	
Conditions for course completion: Attendance: A student may have one unexcused absence in seminar at the most. Absence in more than one seminar must be reasoned and substituted by consultations. Conditions of continuous and final control: during the semester a student is continuously checked and assessed according to his/her activity. To be awarded the credits, a student must pass a test from knowledge obtained in the lectures and seminars. Results of the test will make up the final grade.	
Learning outcomes: The course is aimed at getting familiar with the basic issues of methodology and philosophy of science. Significant part will be devoted to presenting the main concepts of the philosophy of science in the 20th century and this aim will be achieved by reading the source and interpretive texts.	
Brief outline of the course: <ul style="list-style-type: none"> • Falsificationism and critical realism by K. R. Popper. • Development and critique of the Popper's concept. • Understanding the science development in the work by T. S. Kuhn. • Methodology of scientific research programmes of I. Lakatos. • Methodological anarchism of P. Feyerabend. • W.V.O. Quine – the issue of relation between theory and empiricism. 	
Recommended literature: BILASOVÁ, V. – ANDREANSKÝ, E.: Epistemológia a metodológia vedy. Prešov: FF PU 2007. FAJKUS, B.: Filosofie a metodologie vědy. Praha: Academia 2005. BEDNÁRIKOVÁ, M. COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚBEV/ MZO1/03	Course name: Molecular Basis of Ontogenetic Development
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 3	
Recommended semester/trimester of the course:	
Course level: II.	
Prerequisites:	
Conditions for course completion: written examination (pass three tests)	
Learning outcomes: Acquiring of basic knowledge about molecular and regulatory mechanisms of ontogenetic development of multicellular organisms (animal and plant organisms).	
Brief outline of the course: Molecular and regulatory basis of ontogenesis: 1) Totipotency of zygote and genomic equivalence as general pre-requisite for ontogenetic development. Cell adhesion and migration, positional information, developmental signals and morphogens. 2) Induction, determination and differentiation. Selective gene expression, combinatory control of gene expression, lateral inhibition. 3) Mechanisms of epigenetic memory. DNA methylation, genomic imprinting, X-chromosome inactivation. Morphogenesis (asymmetry and polarity of cells, reorganization of cytoskeleton, embryonic folding and flexion). 4) Genes controlling development (selector genes, regulators and super-regulators, homeotic genes). Programmed cell death (apoptosis autophagy). 5) 1st test. Ontogenetic development of drosophila: 6) Oogenesis. Specification and polarization of oocyte, determination of oocyte axes. Fertilization, cleavage and early embryogenesis. 7) Early embryo polarization and determination of embryo axes. Specification of body segments, segmentation genes. 8) Gastrulation (germ layers formation, neurulation). Morphogenesis and cell rearrangements. Development of some organs and organ systems. Pupation and metamorphosis. 9) 2nd test. Ontogenetic development of mammals: 10) Fertilization. Cleavage and early embryogenesis (blastulation, gastrulation, neurulation). 11) Early embryo polarization and determination of embryo axes. Induction of primitive streak and germ layers formation. Specification and development of CNS. Somitogenesis, myogenesis. 12) Development of some organs and organ systems. 13) 3rd test.

Number of ECTS credits: 2	
Recommended semester/trimester of the course: 2.	
Course level: II.	
Prerequisites:	
Conditions for course completion: Attendance of practicals	
Learning outcomes: Acquire the basic information and skills you need for birdwatching. Learn to distinguish bird species of different ecological groups under field conditions using visual and acoustic methods. Demonstrate capturing and marking birds for research purposes. Participants will learn information on current scientific and conservation developments in the field.	
Brief outline of the course: <ol style="list-style-type: none"> 1. Field trips for birds in the morning and evening 2. Observation of breeding behaviour, feeding ecology and migration 3. Mist-netting and banding of birds by ornithological rings 4. Processing of acoustic recordings and computer data analysis 5. Modern technologies and field methods for studying bird behaviour 6. Practical nature conservation 7. Citizen science 8. Ad hoc lectures on bird topics 9. Visit to a site where up to 100 bird species can be observed during the excursion

Course ID: ÚBEV/ PAR2/03	Course name: Parasitology II
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 1 / 1 Per study period: 14 / 14 Course method: distance, present	
Number of ECTS credits: 3	
Recommended semester/trimester of the course: 2.	
Course level: II., III.	
Prerequisites:	
Conditions for course completion: active participation in practical exercises presentation of seminar work continuous written examinations oral examination	
Learning outcomes: After completing the course Parasitology II. students will demonstrate - knowledge of diagnostic methods commonly used in parasitology - practical use of methods commonly used in parasitology - evaluate the method of detection and identification on the basis of knowledge of parasite life cycles	
Brief outline of the course: The course builds on the knowledge acquired in the Parasitology I. course, expands them and includes vectors transmitted organisms. It focuses on mastering the methods used in parasitology. Syllabus: Week 1: Parasitic adaptations Week 2: Parasite-host interactions Week 3: Behavioral strategies of parasites Week 4: Effect of the parasite on host behavior Week 5: Vector-borne viruses Week 6: Vector-borne bacteria Week 7: Vector-borne parasites Week 8: Laboratory diagnostic methods Week 9: Flotation and serological methods Week 10: Molecular detection and identification Week 11: Methods of capturing vertebrates for parasitological purposes Week 12: Methods of capturing invertebrates for parasitological purposes Week 13: Parasitological autopsy

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚBEV/ MR1/03	Course name: Plant Metabolism
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present	
Number of ECTS credits: 6	
Recommended semester/trimester of the course:	
Course level: II.	
Prerequisites:	
Conditions for course completion: 1. Active participation in laboratory practicals. Reasoned absence can be justified by the teacher for a maximum of 4 hours (one two-hour course) without the need for replacement. In the case of a longer justified absence, the teacher will determine an alternative form of mastering the missed teaching. 2. Before the practicals, students have to study the main theses of the task that will be realized. Students will receive an exact schedule of tasks according to individual lessons at the beginning of the semester. 3. Students make a written record of the practicals. Students will evaluate the results from and draw a conclusion. The form in which this activity will be checked is determined by the teacher at the beginning of the semester. After this check the task is considered validly completed. 4. Whole practicals are considered to be finally completed upon valid completion of all tasks. The exception is the justified non-participation (point 1). Completion of practicals is obligatory before the exam. 5. The exam of the subject takes place orally. Students ask two questions and have a max. 30 minutes to prepare. Any changes or modifications to the conditions for completing the course due to the COVID19 pandemic, or other serious reasons, are continuously published on the electronic bulletin board of the course.	
Learning outcomes: The subject significantly deepens knowledge from the bachelor's degree. The student should gain an overview of the basic biochemical processes in plants. Emphasis is placed on understanding the principles of their functioning and their significance for plants. Acquaintance of students with basic biochemical research methods of plant metabolism within the practical part. The result of education is also the ability to process and express own results.

Course type, scope and the method: Course type: Practice Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 2	
Recommended semester/trimester of the course:	
Course level: I., II., P	
Prerequisites:	
Conditions for course completion: Completion: passed Condition for successful course completion: - active participation in line with the study rule of procedure and course guidelines - effective performance of all tasks- aerobics, water exercise, yoga, Pilates and others	
Learning outcomes: Content standard: The student demonstrates relevant knowledge and skills in the field, which content is defined in the course syllabus and recommended literature. Performance standard: Upon completion of the course students are able to meet the performance standard and: - perform basic aerobics steps and basics of health exercises, - conduct verbal and non-verbal communication with clients during exercise, - organise and manage the process of physical recreation in leisure time	
Brief outline of the course: Brief outline of the course: 1. Basic aerobics – low impact aerobics, high impact aerobics, basic steps and cuing 2. Basics of aqua fitness 3. Basics of Pilates 4. Health exercises 5. Bodyweight exercises 6. Swimming 7. Relaxing yoga exercises 8. Power yoga 9. Yoga relaxation 10. Final assessment Students can engage in different sport activities offered by the sea resort – swimming, rafting, volleyball, football, table tennis, tennis and other water sports in particular.

Number of ECTS credits: 5					
Recommended semester/trimester of the course: 1., 3.					
Course level: II.					
Prerequisites:					
Conditions for course completion: Successful completion of the course requires active participation in lectures, preparation and presentation of a PPT presentation on the assigned topic (short literature research), processing of the assigned task in practical exercises and presentation of the results of the task, passing the oral examination.					
Learning outcomes: The goal of the course is to understand soil as a heterogeneous substrate and environment for organisms, with an emphasis on the mineral and organic components of soil that are essential for the existence and development of populations of living organisms.					
Brief outline of the course: The subject covers characterization of components of the soil environment, microclimate, nutrient cycling and energy flow. It deals with soil-forming factors and processes, soil organisms (microbial communities, plant roots, invertebrate communities) and functioning of the soil system (decomposition, litter system, rhizosphere, drillosphere, termitosphere).

Prerequisites:	
Conditions for course completion: Min. 80% of active participation in classes.	
Learning outcomes: Sports activities in all their forms prepare university students for their professional and personal life. They have a great impact on physical fitness and performance. Specialization in sports activities enables students to strengthen their relationship towards the selected sport in which they also improve.	
Brief outline of the course: Brief outline of the course: The Institute of physical education and sport at the Pavol Jozef Šafárik University offers 20 sports activities aerobics; aikido, basketball, badminton, body-balance, body form, bouldering, floorball, yoga, power yoga, pilates, swimming, fitness, indoor football, SM system, step aerobics, table tennis, chess, volleyball, tabata, cycling. Additionally, the Institute of physical education and sport at the Pavol Jozef Šafárik University offers winter courses (ski course, survival) and summer courses (aerobics by the sea, rafting on the Tisza River) with an attractive programme, sports competitions with national and international participation.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚBEV/ BKB/20	Course name: Stem Cell Biology
Course type, scope and the method: Course type: Lecture Recommended course-load (hours): Per week: 2 Per study period: 28 Course method: present	
Number of ECTS credits: 4	
Recommended semester/trimester of the course: 1., 3.	
Course level: II.	
Prerequisites:	
Conditions for course completion:	
Learning outcomes: <p>The aim of the course is to ground students with basic knowledge about biology of hematopoietic stem cells and about the embryonic, adult and cancer stem cells. The purpose of the course is to acquaint student with regulation of self-renewal, proliferation, differentiation and plasticity of stem cells, as well as the humoral factors involved in these processes. Moreover, the microenvironment of stem cells and clinical use of cytokines and hematopoietic stem cells will be discussed during the course, together with the induced pluripotent stem cells and potential usage of stem cells in regenerative medicine.</p>	
Brief outline of the course: <ol style="list-style-type: none"> 1. Stem cell, the features of stem cells; 2. Pluripotent/multipotent hematopoietic stem cells; 3. The investigation methods of stem cells, the models of functional organization of population of hematopoietic stem cells, differentiation antigens; 4. Myeloid hematopoietic stem cell; 5. Megakaryocyte–erythroid progenitor cells; 6. Common lymphoid progenitor; 7. Microenvironment of stem cells, homing and mobilization of hematopoietic stem cells; 8. Plasticity of stem cells and factors regulating self-renewal, proliferation and differentiation; 9. Cytokines, hematopoietic growth factors and interleukins in hematopoiesis; 10. Clinical use of cytokines and hematopoietic stem cells; 11. Embryonic and induced pluripotent stem cells and their potential in regenerative medicine; 12. Adult stem cells and their potential in regenerative medicine; 13. Cancer stem-like cells.

COURSE INFORMATION LETTER

University: P. J. Šafárik University in Košice	
Faculty: Faculty of Science	
Course ID: ÚBEV/ ZOG1/03	Course name: Zoogeography
Course type, scope and the method: Course type: Lecture / Practice Recommended course-load (hours): Per week: 2 / 2 Per study period: 28 / 28 Course method: present	
Number of ECTS credits: 6	
Recommended semester/trimester of the course: 1.	
Course level: I., II.	
Prerequisites:	
Conditions for course completion: Active participation in seminars. Preparation of oral presentation to a selected topic. Completion of two semestral written examinations. Oral examination.	
Learning outcomes: The main goal of the subject is to get knowledge on the basic reasons of recent distribution of the animals on the Earth, zoogeographic regionalization of the Earth's surface and human influence on the faunal distribution in the history.	
Brief outline of the course: This course will review our current understanding of the patterns of animal distribution and the processes that influence distributions of species and their attributes. Zoogeography will integrate information on the historical and current ecology, genetics, and physiology of animals and their interaction with environmental processes (continental drift, climate) in regulating geographic distributions. The course will emphasize descriptive and analytical approaches useful in hypothesis testing in zoogeography and will illustrate applied aspects of zoogeography (e.g. refuge design in conservation).
